Capacity Reservation for Capital-intensive Technologies Stefan Spinler,2012-12-06 Arguably the central problem in operations research and management science (OR/MS) addressed by e-Business is better coordination of supply and demand, including price discovery and reduction of transactions costs of buyer seller interactions. In capital-intensive industries like chemicals and steel, the out-of-pocket costs of excess capacity and the opportunity costs of underutilized capacity have been important factors driving the growth of exchanges for improving demand and supply coordination through e-Business platforms. Stefan Spinler addresses in his dissertation one of the most interesting aspects of this evolution for OR/MS, the parallel development of long-term and short-term markets for capacity and output, accompanied by a range of exotic options and forwards as the basic mechanisms supporting transactions. This is a fascinating research topic because it builds on the powerful framework of real options, while connecting directly to key operations decisions (capacity planning, staffing, maintenance, and so forth) of the plants and technologies whose output is the focus of contracts. From the perspective of practice, the use of these contracting mechanisms, as facilitated by a new breed of B2B exchanges, represents an opportunity for further improving supply chain performance and capital asset productivity.

What Remains Sarah E. Wagner,2019-11-05 Winner of the 2020 Victor Turner Prize in Ethnographic Writing Nearly 1,600 Americans are still unaccounted for and presumed dead from the Vietnam War. These are the stories of those who mourn and continue to search for them. For many families the Vietnam War remains unsettled. Nearly 1,600 Americans—and more than 300,000 Vietnamese—involved in the conflict are still unaccounted for. In *What Remains*, Sarah E. Wagner tells the stories of America's missing service members and the families and communities that continue to search for them. From the scientists who work to identify the dead using bits of bone unearthed in Vietnamese jungles to the relatives who press government officials to find the remains of their loved ones, Wagner introduces us to the men and women who seek to bring the missing back home. Through their experiences she examines the ongoing toll of America's most fraught war. Every generation has known the uncertainties of war. Collective memorials, such as the Tomb of the Unknowns in Arlington National Cemetery, testify to the many service members who never return, their fates still unresolved. But advances in forensic science have provided new and powerful tools to identify the remains of the missing, often from the merest trace—a tooth or other fragment. These new techniques have enabled military experts to recover, repatriate, identify, and return the remains of lost service members. So promising are these scientific developments that they have raised the expectations of military families hoping to locate their missing. As Wagner shows, the possibility of such homecomings compels Americans to wrestle anew with their memories, as with the weight of their loved ones' sacrifices, and to reevaluate what it means to wage war and die on behalf of the nation.

Endofullerenes T. Akasaka,Sh. Nagase,2012-12-06 To the eyes of a chemist, carbon is certainly one of the most fascinating elements of the periodic table. Basically, the electronic structure and atomic size of carbon enables this element to form a variety of bonds with other elements and, most importantly, with other carbon atoms as well. These unique features lead to the amazingly complicated molecular structures we encounter e. g. in life sciences and organic chemistry. Of course, the technical importance of carbon is enormous- but I don't want to carry too many coals to Newcastle. From the viewpoint of an astrophysicist or chemist, the significance of carbon lies in the fact that it is the most abundant condensable element in space. Born in the interior of stars, and from there expelled into the interstellar medium, it initiates the formation of simple and complex molecules and of nanoscopic grains. These in turn form huge clouds in space - the birthplace of new stars and planetary systems. The decisive role of carbon in interstellar chemistry is widely accepted and the search for more and more families of interstellar carbon-bearing molecules is a topic of ongoing research. The interdisciplinary aspect of carbon also concerns its various solid forms, in which C and the other closed-cage fullerenes are certainly some of the most popular 60 newcomers.

The Solid State Maser J. W. Orton,D. H. Paxman,J. C. Walling,2016-04-20 The Solid State Maser presents readings related to solid state maser amplifier from the first tentative theoretical proposals that appeared in the early 1950s to the successful realization of practical devices and their application to satellite communications and radio astronomy almost exactly 10 years later. The book discusses a historical account of the early developments (including that of the ammonia maser) of solid state maser; the properties of paramagnetic ions in crystals; the development of practical low noise amplifiers; and the characteristics of maser devices designed for communications use. The text also contains reprints of several important papers that illustrate various aspects of solid state maser. Physicists will find the book useful.

Nuclear Magnetic Resonance G A Webb,2007-10-31 As a spectroscopic method, Nuclear Magnetic Resonance (NMR) has seen spectacular growth over the past two decades, both as a technique and in its applications. Today the applications of NMR span a wide range of scientific disciplines, from physics to biology to medicine. Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic. This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications, in particular NMR of natural macromolecules which is covered in two reports: NMR of Proteins and Acids and NMR of Carbohydrates, Lipids and Membranes. For those wanting to become rapidly acquainted with specific areas of NMR, this title provides unrivalled scope of coverage. Seasoned practitioners of NMR will find this an invaluable source of current methods and applications. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist, with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis.

Electron Spin Resonance M C R Symons, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.
