Zeta Pegasi National Aeronautics and Space Administration (NASA),2018-05-20 Broadband photometric observations of the bright star Zeta Pegasi are presented that display brightness variability of 488.2 ± 6.6 micromag (ppm) range with a period of 22.952 ± 0.804 hr (f approx. equals 1.04566 c/d). The variation is monosinusoidal, so the star is recommended for membership in the class of small-amplitude Slowly Pulsating B-Stars (SPB) variables oscillating in a non-radial g-mode. Goebel, John H. The Stars DK,2016-10-11 Expand your horizons and take in the awesome sights of the Universe. Using stunning space photography and easy-to-understand infographics, The Stars takes you to scores of galaxy clusters fantastically far away. Since the Big Bang 13.8 billion years ago, there are now hundreds of billions of stars, 200 billion alone in our home galaxy - the Milky Way. The Stars details 88 constellations to be found in the night sky, including Ursa Major, which contains the seven stars that make up the Plough, as well as Hercules, Lyra, Orion, and far away Andromeda. It explains how they came into being, where they are situated, and their key features. Feast your eyes on glowing galaxies, and rare sights such as dust clouds in the Carina and Ring Nebulae, taken by the Hubble Space Telescope. The Stars also provides an endless parade of mind-blowing facts such as when Betelgeuse explodes, it will release more energy in an instant than the Sun produces in its entire lifetime!

Giants of Eclipse: The ζ Aurigae Stars and Other Binary Systems

Thomas B. Ake, Elizabeth Griffin, 2014-12-30 The zeta Aurigae stars are the rare but illustrious sub-group of binary stars that undergo the dramatic phenomenon of chromospheric eclipse. This book provides detailed descriptions of the ten known systems, illustrates them richly with examples of new spectra, and places them in the context of stellar structure and evolution. Comprised of a large cool giant plus a small hot dwarf, these key eclipsing binaries reveal fascinating changes in their spectra very close to total eclipse, when the hot star shines through differing heights of the chromosphere, or outer atmosphere, of the giant star. The phenomenon provides astrophysics with the means of analyzing the outer atmosphere of a giant star and how that material is shed into space. The physics of these critical events can be explained qualitatively, but it is more challenging to extract hard facts from the observations, and tough to model the chromosphere in any detail. The book offers current thinking on mechanisms for heating a star's chromosphere and on how a star loses mass, and relates this science synergistically to studies of other stars and binaries, and to the increasing relevance of contributions from new techniques in interferometry and asteroseismology. It also includes a detailed discussion of the enigmatic star epsilon Aurigae, which had recently undergone one of its very infrequent and very baffling eclipses. Though not a zeta Aurigae system, epsilon Aurigae is

a true Giant among eclipsing stars. The 7 chapters of this book, written by a group of experts, have been carefully edited to form a coherent volume that offers a thorough overview of the subject to both professional and student.

Set Your Phaser to Stun Steve Pearse, 2011-08-22 Book Summary

This book is a scientific investigation into the Extraterrestrial Hypothesis, which demonstrates beyond a reasonable doubt that we are being visited by extraterrestrial Beings from another World. This story involves two unrelated cases of abduction. The first case is the well known Betty and Barney Hill case that was published in *The Interrupted Journey* in 1961, and *Captured* in 2007. The second case involves a married couple named Kay and Erik Wilson whose experiences were published in *The Alien Jigsaw* in 1993 and its accompanying *Researcher's Supplement* in 1994. Information from both of these cases have been merged together to prove that the star map that Betty Hill drew was not only real, but it was actually Earth based. The Wilson case proved to be the key in unlocking the door. Like Betty Hill, once again, a brave soul had the courage to ask the Beings where they come from; and as a result of this unique one on one conversation between Erik Wilson and a Grey, without realizing it, he was given major clues to find their home world. *Set Your Phaser To Stun!* reveals that Betty's star map is real and the Extraterrestrial Hypothesis has been purposely skewed to deceive the public. When Carl Sagan involved himself in this dispute many years ago, he claimed Betty's star map only showed meaningless random dots, which were not specific points of reference for any known stars. This book proves that Sagan was wrong and was involved in what some people claim to be scientific misconduct relating to the UFO subject. The stars that Betty Hill drew of the star map she was shown

in 1961 are anything but random. *Set Your Phaser To Stun!* takes a fresh new look at the Betty and Barney Hill case and examines previous interpretations of the star map, with particular emphasis on Marjorie Fish's Zeta Reticuli Interpretation. This new research, which began in the year 2000, uncovers the fact that some of our closest neighborhood stars are linked in a network of trade and exploration by a highly advanced extraterrestrial civilization that is less than 50 light years away from us. The real shock is the location of Sol, our sun, and the role humans play in the aliens' agenda. For far too long the establishment has systematically denied the Extraterrestrial Hypothesis has any substance. This opinionated stance has been based on the urgent need to control the dissemination of news that they feared would ultimately damage the fabric of our society should it be released. An extreme political drama of the highest order has been blocking disclosure. The Military Industrial Complex has been unwilling to relinquish control to civilian authorities and there is a grave fear that disclosure will have a severe, negative impact on our Religious Institutions worldwide. They fear allowing the public access to information which would severely challenge the traditional belief that humanity is unique and has a special relationship to God. The official position on this subject is based upon the idea that society is not prepared to handle the psychological impact of the knowledge that we are not alone in the universe. They have even gone so far as resorting to scientific misconduct because they are deeply afraid of possible societal upheaval. Fortunately, in May of 2008, a remarkable turn of events occurred within the Catholic Church when astronomer Father Gabriel Funes wrote in the Vatican Newspaper that "intelligent beings created by God could exist in outer space." He moved further toward official legitimization of the

acceptance of other life by calling the aliens our “Brothers and Sisters.” This was the beginning of a slow and well planned acclimation process of one billion Catholics worldwide. It has often been stated that we would have to rewrite history if contact with an alien civilization ever took place. Set Your Phaser To Stun!- is the beginning of that process.

Astronomy with an Opera Garrett Putman Serviss,2021-01-01 In the pages that follow, the author has endeavored to encourage the study of the heavenly bodies by pointing out some of the interesting and marvelous phenomena of the universe that are visible with little or no assistance from optical instruments, and indicating means of becoming acquainted with the constellations and the planets. Knowing that an opera-glass is capable of revealing some of the most beautiful sights in the starry dome, and believing that many persons would be glad to learn the fact, he set to work with such an instrument and surveyed all the constellations visible in the latitude of New York, carefully noting everything that it seemed might interest amateur star-gazers. All the objects thus observed have not been included in this book, lest the multiplicity of details should deter or discourage the very readers for whom it was specially written. On the other hand, there is nothing described as visible with an opera-glass or a field-glass which the author has not seen with an instrument of that description, and which any person possessing eye-sight of average quality and a competent glass should not be able to discern.

With over 100,000 copies sold since first publication, this is one of the most popular astronomy books of all time. It is a unique guidebook to the night sky, providing all the information you need to observe a whole host of celestial objects. With a new spiral binding, this edition is even easier to use outdoors at the telescope and is the ideal beginner's book. Keeping its distinct one-object-per-spread format, this edition is also designed for Dobsonian telescopes, as well as for smaller reflectors and refractors, and covers Southern hemisphere objects in more detail. Large-format eyepiece views, positioned side-by-side, show objects exactly as they are seen through a telescope, and with improved directions, updated tables of astronomical information and an expanded night-by-night Moon section, it has never been easier to explore the night sky on your own.
