Alfred Hutton

Blood and Steel Palmer Blackstock,2019-09 Death is a fickle thing. For most, it's a force of nature, but Agil Novan sees the reaper in a different light. As the greatest swordsman of all time, he cherishes life more than most, and he's lived one full of both struggle and success. After all of his accomplishments, he too must face the reaper and its scythe. When challenged, however, the swordsman is not one to go without a fight. After parrying it once and then impressing the reaper with a show of the blade, he is offered something more. A second chance at life--one that he's all but forced to accept. Now, stranded in an unfamiliar land with an unfamiliar body and far too many questions, Agil has his life threatened at every turn. Still, he is determined to survive. He knows what the reaper did to him. And he has never been one to let vengeance go unfulfilled.

The Sword and the Crucible Alan Williams,2012-05-03 The sword was the most important of weapons, but relatively little has been written about its metallurgy. The results of the microscopic examination of over a hundred swords are used to tell the story of the making of swords from the first examples through the Middle Ages to the 16th century.

Iron and Steel in Ancient China Donald B. Wagner, 2021-12-06 This book is a study of the production and use of iron and steel in China up to the second century B.C., and simultaneously a methodological study of the reconciliation of archaeological and written sources in Chinese cultural history. An introductory chapter describes and discusses the available sources and their use, gives a brief outline of early Chinese archaeology and history, and develops certain important themes, especially the interaction of North and South in early China. Further chapters consider the invention of iron in a barbarian culture of southeast China, its spread to the area of Chinese culture, and the development of a large-scale iron industry in the third century B.C. The technology of iron production in early China is considered in two chapters, on the microstructures of wrought and cast iron artifacts.

Save the World Academy Part I: The Sword of Steel James K.B. Brough,

Chronicles of the End Times Mark Davidson, 2018-10-05 Mark Davidson, author of *Daniel Revisited*, has created a unique interpretation of end-time Bible prophecy using the ancient concentric reading method

known as chiasmatics. Lost centuries ago, it was rediscovered by seminary scholars in the eighteenth century. This reading method reveals the form of the scripture text via the flow of its words, giving us a heightened sensitivity to the words in the text. When combined with the words' meanings, we receive a greater understanding of prophetic scripture. In *Daniel Revisited*, Davidson showed us the four signposts—four events prophesied in Daniel 7 and 8 and Revelation 6—to occur in the Middle East prior to the Rapture and Tribulation. Now in *Chronicles of the End Times*, chiastic reading has been applied to all of Daniel, Revelation, and other books, pulling back the veil further to expand our view from four events to all the main events, from the Middle East to the ends of the earth. A chiastic reading of Daniel, Zechariah 1–6, Matthew 23–25, and Revelation—all shown in ninety illustrations—yields many solid answers to the following questions as well as to many others: — How do Daniel 2 and 7 interact, and why are the kingdoms metals and beasts? — What's the purpose of Daniel's Aramaic chapters, and how do they affect the end times? — Which parts of Daniel 11 are to be fulfilled in ancient times versus end times? — What is the real identity of Mystery Babylon, and how does this help us in the end times? — How do the two scrolls of Revelation give greater understanding of the trumpets and bowls? — What are the Seven Events of the end times, and which one is next? This all may seem incredible for one book, but is nevertheless true. The chiastic reading of Bible prophecy revolutionizes our view of the end times and how we read Bible end-time prophecy.

Steel Metallurgy for the Non-Metallurgist John D. Verhoeven, 2007 This book explains the metallurgy of steel and its heat treatment for non-metallurgists. It starts from simple concepts--beginning at the level of

high-school chemistry classes--and building to more complex concepts involved in heat treatment of most all types of steel as well as cast iron. It was inspired by the author when working with practicing bladesmiths for more than 15 years. Most chapters in the book contain a summary at the end. These summaries provide a short review of the contents of each chapter. This book is THE practical primer on steel metallurgy for those who heat, forge, or machine steel.

The Steel of Sapience, 2021-12-14 Over a hundred years ago, members of the ancient Vanari race fled

northbound, eluding the conflicts brought to them by mankind. From there they came across the olden city of ash, deciding to take refuge and call it their home. Years later while at full strength, the Vanari re-established their once broken sovereignty, and along with it, forged ancient weapons infused with the cosmic arts, each gifted to renowned warriors for their courage and fidelity. There was once a time where the Vanari were everlasting in their supremacy. Until one particular day, they all vanished in the blink of an eye. Today, the Vanari race, now presumed dead, have been vanquished alongside their empire, and what remains of the ancient weapons have been scattered. Amidst the chaos and conflict which continues to reign throughout the nations across, one of the weapons has finally been unveiled after so long. A sword, saturated with the moonlight artistry, Lunarmancy. And the man who holds it now, an orphan man, named Auden Stray. This is the story of not a hero, but a person, who wields the sword named Sapience.

The Sword Lisa Deutscher, Mirjam Kaiser, Sixt Wetzler, 2019 A multidisciplinary overview of current research into the enduringly fascinating martial artefact which is the sword.

Damascus and pattern-welded steels - Forging blades since the iron age Madeleine Durand-Charre, 2014-07-03T00:00:00+02:00 Steels are a class of materials with multiple and complicated transformations; this is true even for steels of the basic cutlery industry. A damascus steel is a fascinating subject to study, rich in multiple facets, that appears in a first approach as a composite material artistically exploited. Damacus steel was developed in the first millennium AD in India or Sri-Lanka. Its reputation is related to its exceptional properties and to the moire pattern. A similar damask pattern could be obtained by forge-welding giving rise to controversies. Recent findings allow a better understanding of this pattern

formation. This book presents firstly, observations of ancient blade samples examined with modern technologies such as electron microscopy. The features of many typical swords from different periods are discussed: Celtic, Merovingian, Viking and oriental wootz swords, Persian shamshirs, Japanese katana, rapiers etc. In the second part, microstructural observations at different levels of magnification are displayed and their interpretation is discussed in detail, thus revealing the secret of sophisticated forgings. One chapter is devoted to introducing the main transformations undergone by these steels during the forging processes. The book is intended for all those people interested in the history of science and more specifically to the metallurgists, to the archaeologists and all the researchers confronted with the problems of the expertise of the vestiges, to the blacksmiths, and to the collectors of valuable artistic blades. Madeleine Durand-Charre has taught structural metallurgy at the Polytechnic Institute of Grenoble and at the University Joseph Fourier of Grenoble. Her research work concerned microstructure formation and determination of phase equilibria. She investigated complex alloys such as superalloys and steels. Her work on vanadium cast irons was awarded the Vanadium Shield in 1989 from the Institute of Metals. She is author of several books and articles in metallurgy.
