Modelling the Sturmgeschütz III Gary Edmundson, 2006-09-26 The concept of

the Sturmgeschutz III started well before the war when the German army announced the need for a self-propelled 75mm gun to be used for infantry support. By 1938, several '0-Serie' prototype vehicles were produced on earlier style Panzer IIIB chassis by Daimler-Benz. The manufacture of the first 30 production vehicles (StuG III Ausf. A) that went into combat in the invasion of France were made at the Alkett factory in Berlin. As the war progressed, the StuG III was continuously improved with variants A through E, and then given a longer, more powerful gun starting with the Ausf. F. The role of the AFV became more diverse, and duties as a tank hunter increased. Some StuG III were allotted to Panzer companies to supplement their losses. Significant changes to the hull were made with the introduction of the Ausf. G, with the later variant of the G being produced right up until April of 1945. The StuG III chassis was also used to house the 10.5 cm Sturmhaubitze 42 L/28 howitzer, of which over 1.200 were produced by Alkett. With the low silhouette and strongly armoured hull, the StuG III proved to be one of the more significant weapons of the German forces of World War II. The book details the construction of four models in 1/35 scale, and includes a gallery feature covering all variants of the StuG III. Aftermarket products are added to the basic kits to produce accurate replicas. References are extensive on this particular vehicle, and are clearly presented as each correction or enhancement to the kits is explained.

Sturmgeschutz III & Sturmhaubitze 42 Vyacheslav Kozitsyn, 2019-01-18 The

As you would expect from Panzerwrecks, each book has high production values, with large format photographs selected for the interest and rarity printed on high-quality gloss art paper. Felipe Rodna provides the artwork as diptychs - in the house style. Vyacheslav's debut is the Sturmgeschütz III & Sturmhaubitze 42 - looking at the 'long-gun' Stugs; Ausf.F, F/8 & G and the howitzer armed Sturmhaubitze 42. 100+ large-format photographs, 6 color artworks and various unit insignias

STUG III Sturmgeschutz III Ausfuhrung A to G (SdKfz 142) Enthusiasts' Manual Mark Healy,2019-12-17 The German Sturmgeschütz series of assault guns was a successful and cost-effective range of armoured fighting vehicles; of which some 10,000 were built during the Second World War. Based on the chassis of the Panzer III tank; the turret was replaced by an armoured fixed superstructure fitted with a more powerful 7.5cm StuK 40 L/48 gun. Originally intended as a mobile assault weapon for infantry support; the StuG was constantly modified and saw extensive use on all battlefronts as an assault gun and tank destroyer. Its fixed superstructure with limited-traverse mounting for the main armament was simpler and cheaper to build than the turret of the battle tank; plus its low height meant it was easy to camouflage and conceal. Towards the end of the war; more StuGs were built than tanks. StuGs also saw combat when used by several Axis allies; notably

Romania and Finland. They were also exported to Bulgaria, Hungary, Italy, and Spain. The Soviet Union gave some of their captured German vehicles to Syria in the 1950s, which continued to use them up until the War over Water against Israel in the mid-1960s. By the time of the Arab-Israeli Six-Day War in 1967; all of them had been either destroyed, stripped for spare parts, or placed on the Golan Heights as static pillboxes.

German Assault Guns and Tank Destroyers 1940 - 1945 Anthony Tucker-Jones, 2016-10-30 The assault guns and tank destroyers deployed by the Wehrmacht during the Second World War are not as famous as tanks like the Tiger and Panther, but they were remarkably successful, and they are the subject of Anthony Tucker-Jones's wide-ranging photographic history. As the conflict progressed, the German army had to find a use for its obsolete panzers, and this gave rise to the turretless Sturmgeschütz or assault guns designed for infantry support. From 1944 onwards they played a vital role in Nazi Germany's increasingly defensive war. A selection of rare wartime photographs shows the variety of turretless armored fighting vehicles that were produced and developed — various models of the Sturmgeschütz III, the Sturmhaubitze, Jagdpanzer, Panzerjäger, Marder, Hetzer. Often a lack of tanks meant that these armoured vehicles were called on to fill the panzer's role, and they proved ideal during the Germans' defensive battles on the Eastern Front as well as in Italy and Normandy — they were instrumental in delaying Germany's defeat. This highly illustrated account provides is a fascinating

introduction to one of the less well-known aspects of armored warfare during the Second World War.

The Panzer III Bob Carruthers, 2013-05-17 The Panzer III was designed to be the backbone of the Panzer force and was deployed on every front. However, due to its deficient armament and poor armour, and despite its outstanding reliability, it was obsolete by 1942.??This comprehensive overview of the Panzer III in action was compiled by Emmy Award winning historian Bob Carruthers. It draws heavily on war-time intelligence reports to produce a fascinating insight into the development and combat history of the Panzer III at the tactical and operational level.??Also featured are rare developments such as the flame thrower variant alongside unpublished photographs and illustrations which provide an absorbing study, from an array of primary sources, of the world of the Panzer III and its crews, which conveys to the modern reader a vivid sense of how they were viewed at the time.

Tracts,2007-01-01 Panzer Tracts No. 3-2 - Panzerkampfwagen III Ausf.E, F, G, und H development and production from 1938 to 1941. 38 years of digging out original records in public and private archives and hundreds of visits to museums were spent in creating this penultimate history of a winner - the Panzerkampfwagen III variants used to win the 1939 to 1941 campaigns. Survivors were accurately measured in detail and drawn at full scale to create as-built drawings for the first time - accurate to the same tight tolerances demanded of the original assembly firms. Thousands of hours went into sorting out the defining features for each Ausfuehrung as well as when significant modifications were introduced. We have selected the unique approach of using 1/10th scale drawings to illustrate the smallest details, while six-view (including right side and belly) 1/35th scale drawings are still used for the complete Pz.Kpfw.III. Over 120 clean/rare photos and drawings illustrate this 84 page book.

M10 Tank Destroyer vs StuG III Assault Gun Steven J. Zaloga,2013-08-20 The Allies' M10 Tank Destroyer and the Germans' Sturmgeschütz (StuG) lll were the unsung workhorses of the northwest European battlefields of 1944—45. While their mission was not principally fighting one another, their widespread use ensured their frequent encounters, from the Normandy Bocage, to the rubble-

strewn streets of Aachen. The StuG lll was the quintessential assault gun, a low-slung, heavily armoured, turret-less vehicle intended to provide direct fire support for infantry formations, whilst the M10 3in Gun Motor Carriage was originally developed as a tank destroyer. However, by 1944 the 3in gun proved ineffectual against the most thickly armored German tanks, and was consequently relegated to infantry support too. Widely deployed in roles their designers had not envisaged, these two armoured fighting vehicles clashed repeatedly during the 11-month campaign, which saw the Allies advance from Normandy to the heart of the Reich. Fully illustrated with specially commissioned artwork, this is the story of their confrontation at the height of World War ll.

Panzerwrecks 18 Lee Archer, William Auerbach, 2014-12-07 Large, landscape format presentation of German Armour seen in combat during the last months of WW2. 126 rare and mostly unpublished photos sourced from around the world tell the story of the defeat of the Panzerwaffe. Features include The Assault on Raamsdonk, Netherlands, by British tank troops, the Ambush of the 9.SS-Pz.Div at St. Amand, France, Modified Jagdpanthers with splinter protection on their engine decks, and the medium 'Zugkraftwagen' 8t with wooden driver's cab and bodywork. Plus Tigers, Panthers, Panzer IVs and StuGs. Not to be missed!

<u>Stug III & Stug IV</u> Dennis Oliver,2019-03-30 A guide that blends the history behind this German World War II tank with resources for military vehicle

modeling enthusiasts. In the last years of the Second World War the Sturmgeschütz III (StuG III) and Sturmgeschütz IV (StuG IV) played a vital role as assault guns during the German army's struggle to block the Allied advance on the Western Front. As the Wehrmacht's tank forces declined, these armored vehicles were thrown into every defensive operation. They are not as well-known as the Tigers and Panthers, but German resistance would have been much weaker without them. They were also among the most frequently encountered German armored vehicles on the battlefields, which is why they are such a fascinating subject for Dennis Oliver in this volume in the TankCraft series He uses archive photos and extensively researched color illustrations to examine the StuG III and StuG IV deployed by the German army and the Waffen-SS during these doomed campaigns. A key section of his book displays available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined providing everything the modeler needs to recreate an accurate representation of these historic armored vehicles.
