Seung-Ho Joo,Tae-Hwan Kwak

Korea in the 21st Century Seung-Ho Joo,Tae-Hwan Kwak,2001 At the turn of the second millennium, Koreans face multiple challenges at home and abroad. South Korea is still in the throes of democratisation and economic reforms, while North Korea faces food shortages and other economic difficulties. The two Koreas need to manage the unification process so as to bring about national harmony and promote economic prosperity. The Korean people need to devise a new security strategy for a unified Korea to ensure its survival and independence in the early 21st century. This collection is divided into three parts, and each addresses an important issue area confronting the Korean people in the 21st century. Part I examines South Korea's democratisation and economic reforms against the backdrop of the East Asian financial crisis. Part II discusses the problems and prospects for inter-Korean relations and the characteristics of North Korea's foreign policy behaviour. Part III analyses South Korea's security relations with the four major powers at the turn of the new millennium. All chapters are written by renowned experts in their fields and offer valuable insights into the dynamics of the two Korean's domestic politics and foreign policy.

Sukhoi Su-27 Series Theodore Gianna,2023-09-20 Sukhoi Su-27 production began in 1982. The Su-27 project, however, started in 1969, when the United States declared intentions to construct a new fighter, the F-15 Eagle. The Soviet government wasted no time developing a response to counterbalance the latest American aircraft. The project was named the 'Promising Frontline Fighter Project'. Sukhoi was chosen as the project's winner, and the new frontline fighter was named the Su-27. After the Su-27 entered service with the Russian Air Force (VVS), the sky was the limit for Sukhoi and its family of fighters. The company churned out outstanding variants of the Su-27 series. The first variant is the Su-30 two-seat all-weather, air-to-air, and air interdiction missions multirole fighter. The Su-30, which evolved from the Su-27UB two-seat combat trainer, features updated avionics and can conduct ground attack missions. The following aircraft is the two-seat Su-32 fighter bomber. It was designed for round-the-clock, all-weather engagement of ground and surface targets at considerable distances from home bases. It also has precision-guided weapons to attack enemy aircraft in an intense counter-fire and ECM environment. The subsequent aircraft is the Su-33 all-weather carrier-based twin-engine air superiority fighter, designed primarily for use on the Russian 'Admiral Kuznetsov' heavy aviation cruiser. Next is the superb Su-34 multifunctional supersonic fighter bomber which is equipped with the 'Kinzhal' hypersonic missile system. Then comes the granddaddy of the series, the Su-35S 4++ generation multirole super-maneuverable fighter, arguably the most visually striking fighter aircraft on the market today, and is an exceedingly lethal adversary in a combat situation. It possesses extreme super maneuverability and is exceptionally agile and quick. It could also strike targets on the ground. Lastly, there was the Su-37, the most maneuverable variant due to the 'Thrust Vector Control' (TVC) system, which allowed the aircraft to evade a stall scenario during low-speed situations when the control surfaces became ineffective. Using TVC, the aircraft could be controlled in these conditions by relying on engine thrust as opposed to airflow. The Su-37 project was terminated, and only one Su-37 was produced. Nonetheless, the Su-35s today continue to utilize TVC technology.

The Chemistry and Bioactive Components of Turmeric Sreeraj Gopi, Sabu Thomas, Ajaikumar B Kunnumakkara, Bharat B Aggarwal, Augustine Amalraj, 2020-10-15 Turmeric belongs to the family Zingiberaceae and is a yellow spice of high economic importance due to its medicinal value. Cultivated in tropical and sub-tropical regions around the world, it is used extensively as a colouring, flavouring and preserving agent. In recent years, several drugs derived from natural products have been developed and current drug research is actively investigating the possible therapeutic roles of many Ayurvedic medicines, most notable among those being examined is turmeric. The wide range of pharmacological activities attributed to turmeric come mainly from curcuminoids and two related compounds, demethoxycurcumin and bisdemethoxycurcumin. This comprehensive book brings together the research carried out on constituents obtained from turmeric and highlights their chemical and biological activities. Comprising 17 chapters, each written by experts in their respective field and curated by authorities, it will be invaluable to all those who are involved in the production, processing, marketing, and the use of turmeric. Appealing to researchers and professionals in natural products, nutraceuticals and food chemists, this book is exposing some of the myths and showing areas for possible future use.
