50 Airliners that Changed Flying Matt Falcus,2018-06-28 The invention of the aeroplane was the dawn of a new way of travelling. Its potential was quickly realised, and aircraft were developed to carry first mail and then passengers, over distances that would have previously taken many hours or even days. Successive aircraft changed how we experience flight and how far we could go, introducing new standards of on-board service. Flying became an experience like no other; modern airliners offer unparalleled levels of comfort and economic benefits for their operators with levels of automation hitherto unimagined. 50 Airliners that Changed Flying presents the exciting airliners which can genuinely claim to have changed air travel, from the early mail planes and piston liners through the emergence of the jet age, to the sleek and ultra-modern airliners of today.

Helicopters Stanley S. McGowen,2005-05-24 First envisioned by Leonardo da Vinci and first deployed in World War II, the helicopter is now a universal icon of modern warfare, a key component of combat planning around the world, and one of the military's most versatile and effective tools.

Helicopters: An Illustrated History of Their Impact covers the development of helicopters from a concept in Leonardo daVinci's mind to the first successful machines in the early 1900s to the latest tilt-rotor designs. Time and again, in a story of constant innovation, designers answered the concerns of military planners with more maneuverable, more capable rotorcraft. With expert analysis and specific details of every significant model ever used, Helicopters shows how these once denigrated machines became essential to a variety of missions (reconnaissance, transport, attack, support, evacuation, urban combat, quick strikes behind enemy lines, and more). In addition, the book looks at the impact of rotorcraft beyond the military, including their ever-widening role in emergency medical care, police work, traffic control, agriculture, news reporting, and more.

Facing the Unexpected in Flight Jean Pinet, 2015-10-28 Airline pilots often have to face sudden, unexpected situations that can become potentially dangerous. They are trained to deal with these situations, but sometimes the lack of time before the situation deteriorates and the associated stress can compromise their basic cognitive sequence and lead to a serious incident or even an accident. The World's Most Powerful Civilian Aircraft Paul E. Eden, 2016-12-15 The World's Most Powerful Civilian Aircraft profiles many types, from cargo transports and freighters, through flying boats, passenger airliners, and business jets. Featured aircraft include the Ford Trimotor "Tin Goose," one of the great workhorses of early aviation history; the supersonic Tupolev Tu-144 "Charger" and Concorde, Cold War competitors in aviation excellence; and the most popular passenger aircraft of the present, including the Boeing 747 and Airbus A380. Each entry includes a brief description of the model's development and history, a profile view, key features, and specifications. Packed with more than 200 artworks and photographs, this is a colorful guide for the aviation enthusiast.

Flight Of The Titans Kenny Kemp, 2013-07-31 The gripping story of the biggest trade war in aviation history. In October 2007, the colossal Airbus A380, the largest commercial jet in history, will take to the skies. This gigantic double-decker is the first real competitor to Boeing's iconic 747 Jumbo Jet. Meanwhile, Boeing has thrown its weight behind the smaller 787 Dreamliner, an aircraft whose emphasis is on fuel economy and reduced emissions. The future of commercial air travel is in the balance, and the outcome is difficult to predict.

Britain's Glorious Aircraft Industry J Paul Hodgson, 2021-03-03 "The rich and diverse history of the British aircraft industry is captured in superb detail by the author in this weighty tome." —Aviation News Great Britain's aircraft industry started in 1908, with the first formally registered organization in the world to offer to design and build an aeroplane "for commercial gain." This book tells the complete story of the 110 years since the start, all the companies formed and the aircraft they produced, highlighting the advances in aeronautical ambition and technology. It is the story of the creation, survival and decline of all one hundred and twenty-three of the aircraft design and construction companies formed between 1908 and 2018. The exhilaration of success and the magic of aviation technology are vividly illustrated by the technical and political birth stories of iconic projects, such as the Cirrus/Gypsy Moths, the Tiger Moth, the flying boats of Imperial Airways, Spitfire, Lancaster, Viscount, Vulcan, Harrier, Buccaneer and many more. The rotary wing industry is not forgotten. The birth of the jet turbine engine and the quest for supersonic speed is included. The stories of the disappointments of failure and disaster, such as the Brabazon, Comet, Princess,

Rotodyne and TSR-2, and the growth of international collaboration in Concorde, Tornado, Airbus, Eurofighter Typhoon and other projects are included, in the context of the international scene and domestic politics. The conclusion highlights the prominent reminiscences and speculates on the future of the aircraft industry in Britain. "An outstanding reference book and a thoroughly enjoyable canter through the decades, from the days of wood and fabric to the modern composite structure of the wings of the A400 Atlas." —RAF Historical Society
