Sukhoi Su-34 'Fullback': Russia's 21st Century Striker Hugh Harkins, 2013-10-02 Su-34 The Su-34 'Fullback' was developed from the Su-27 'Flanker' interceptor/fighter as a fourth plus generation strike aircraft for service with the Russian Air Force. Conceived in the twilight years of the Soviet Union, the aircraft weathered the financial crisis that gripped post communist Russia following the collapse of the Soviet Union in the early 1990's, maturing into an advanced strike aircraft, deliveries to the Russian Air Force commencing in late 2006. The aircraft is currently in service with increasing numbers being ordered to replace that country's aging fleet of Su-24M/M2 strike aircraft. It is also planned for the Su-34 to replace the Su-24MR in the tactical reconnaissance role. This volume covers the program from conception to operational service with chapters describing the aircraft, systems and weapons, production, flight testing and initial service. The text is complimented by black and white photographs

Sukhoi Su-24 Yefim Gordon, Dmitriy Komissarov, 2015 Developed in the Soviet Union in the 1960s, the Su-24 tactical bomber has become one of the most successful aircraft in its class. Featuring delta wings and auxiliary lift engines meant to improve its field performance, the first prototype turned out to be more of a liability than an asset and the aircraft was redesigned to have variable geometry wings. The Su-24 had its baptism of fire in the Afghan War and was also exported to Iraq, Iran, Algeria, Libya and Syria, seeing action in some of these countries. At home, Russian Air Force Su-24s were heavily involved in the first and second Chechen campaigns and the type has undergone a mid-life update allowing it to carry precision-guided munitions, and is still going strong. Illustrated with over 750 photographs, many

previously unpublished, as well as line drawings, color side views, insignia, unit badges and nose art this latest addition to the Famous Russian Aircraft series will be of interest to aviation enthusiasts and scale modelers alike.

Su-34: Russia's 4th+ Generation Strike Fighter Hugh Harkins, 2019-10-18 Su-34 The Sukhoi Su-34 'Fullback' strike fighter was developed from the Sukhoi Su-27 'Flanker' air superiority fighter as a 4th+ generation strike aircraft for service with the VKS - Russian Federation Air Force - from the second decade of the twenty first century. The Su-34 was designed to replace the Russian Federation's aging fleet of Sukhoi Su-24M/2 variable-geometry strike aircraft and possibly the Su-24MR in the tactical reconnaissance role. Conceived under the T-10V program in the twilight years of the Soviet Union - Union of Soviet Socialist Republics - the design weathered the financial crisis that gripped Russia following the break-up of that union on 25 December 1991. The T-10V matured into an advanced strike aircraft, deliveries to the Russian Federation Air Force commencing in second half of the first decade of the twenty first century. This volume covers the program from conception to operational service with chapters describing the aircraft design, development, production, systems, weapons complexes and strike operations flown by the Russian Aerospace Group supporting the Syrian Arab Republic in the civil war that gripped that nation in the 2010's.

The Sukhoi Su-24 Stanislaw Krzysztof Mokwa, 2020-02-19 Su-24 (Fencer) is a Soviet jet bomber with variable-geometry wings. The aircraft was supposed to be a response to the American F-111, and therefore it's structurally similar. Su-24 can operate in any weather conditions, also at night. It was designed to carry

tactical nuclear weapons. In the 1960s, the military command of the Soviet Union set requirements for a new attack aircraft that would be able to operate despite strong ant-aircraft defense of NATO troops. An aircraft was expected to fly on a very low altitude at a very high speeds. Initially, it was based on Su-7 and Su-15 airframes, but due to the decision to use variable-geometry wing, it was necessary to build a completely new structure. Variable geometry allowed to achieve high speeds while maintaining good takeoff and landing characteristics. This is how Su-24 was born. The first prototype was flown on July 2, 1967 (marked as T6-1), and the second on January 17, 1970 (T6-2I). Variable-geometry wings were only used in the second prototype. In December 1971, the first serial Su-24 was built, but due to the prolonged acceptance tests (lasting until 1974), the aircraft officially did not become operational until February 1975. Su-24 was named Fencer in the NATO code.

Air War Over Syria - Su-24m Hugh Harkins, 2017-06-05 The primary remit of this volume is to document the bombing operations against Islamic State (Islamic State of Iraq and the Levant) and other opposition groups by the Sukhoi Su-24M strike aircraft detachment of the Russian Aerospace Group in the Syrian Arab Republic from 30 September 2015 through mid-March 2016. While the volume is not intended to be a descriptive monograph for the Su-24 strike aircraft, a basic description of the genesis, development and fielding of the weapon system is provided, as are relevant chapters that focus on the initial combat operations phase of the Russian Aerospace Group, Syrian Democratic Army offensive operations from September 2015 to March 2016, a chronological look at the Russian Aerospace Group operations from late October 2015-March 2016, with specifics of Su-24M operations when available, the

combat loss of a Russian Su-24M on 24 November 2015, and its aftermath. It is beyond the scope of this volume to attempt an in-depth analysis of the Syrian conflict, which was in its fifth year before the Russian intervention in 2015. However, a brief outline of the situation on the ground in certain areas is provided where relevant to the Russian campaign as well as a brief outline of the differences in the Russian and western dominated anti-ISIS coalition approach to the attempt to defeat ISIS forces, which, in early 2017, remained entrenched in much of Syria. All technical information concerning the aircraft and weapons systems, along with the majority of the graphic material, has been furnished by the respective Design Bureaus and the Ministry of Defence of the Russian Federation. Within the text there are variations in written orthography of place names such as Latakia, which is also laid-down as Lattakia, or Raqqa which is also laid-down as Raqqah in some texts. Predominantly references to Islamic State are laid down as ISIS.

Sukhoi Su-24 Yefim Gordon, E. Gordon, 2004-10 - Illustrates the Sukhoi Su-24's development and service history, including operations in Russia, the Ukraine, Iran, and Iraq. - To this day the Su-24 remains the principal Russian tactical bomber. - Contains approximately 200 black & white and color photos with detailed captions.

Sukhoi Su-27 Flanker E. Gordon, Yefim Gordon, 1999 The Su-27 entered service with the Russian Air Force in the mid-1980s. This comprehensive history is based on documents supplied from Sukhoi, interviews with design and engineering employees of the company, and all available information that has been published on this deadly aircraft. Contains development history, operational service history, technical details, and explanations of each model in the range. Technical drawings, photos, and text combine to make

this the ultimate Sukhoi Su-27 reference.

The Sukhoi Su-27/Su-33 Stanislaw Krzysztof Mokwa, 2019-12-27 In the late 1960s Soviet Union started working on fighters that would be a counterbalance for the American F-15 Eagle. In 1969, a competition for a new fighter was announced, but when the parameters to be met were given, Pavel Sukhoi withdrew from it. He considered that the required performance could not be reached. Despite this, the designers from his office - Oleg Samojtowicz, Valery Nikolaenko and Vladimir Antonov - developed the plane and presented it for the competition as T-10 prototype. The aircraft was constructed as a heavy interceptor fighter (light version was the MiG-29, which was submitted in the same competition).

Sukhoi Su-34 Fullback Robert Pied,Nicolas Deboeck,2023-06-30 A unique look at the Su-34 Fullback; the first complete walk-around of the huge fighter bomber in service with the Russian Air Force since 2014. Includes never before published action photography which shows the versatility of the aircraft.

Russia's Military Aircraft in the 21st Century Yefim Gordon,2006 This interesting survey looks at Russian military aviation in the post-Soviet era. While difficulties with funding means that the large new aircraft programs of the Cold War era are likely to remain things of the past, military aviation in Russia is not standing still. Upgrades to existing programs and reorganization of current resources are two of the ways in which combat capability is being not just maintained but enhanced. This volume looks at programs like the new Mi-8MTKO and Mi-24PN night-capable helicopters from Mil. The latest Sukhoi upgrades such as the Su-24M2, Su-25SM, and Su-27SM are also explored, along with the programs designed to extend the capabilities of the Tu-95MS and Tu-160 bombers by allowing for the carriage of new and more capable missiles. The revamping of the Russian Air Force's training fleet with the Yakovlev's Yak-130 is also considered, contrasting the differences between the first ones built and production-standard aircraft.

The Tanks of August Ruslan Pukhov,2010 The publication of this book coincides with the second anniversary of the armed conflict between Russia and Georgia on August 8-12, 2008, now dubbed the Five Day War. The conflict was triggered by Georgia's ambitious and nationalistic president, Mikhail Saakashvili,

who attempted a blitzkrieg to conquer the former Georgian autonomy of South Ossetia, which had proclaimed independence. That attempt led to a military intervention by Russia, which acted as the guarantor of peace in the region, and the first official war between Russia and one of the former Soviet republics. This work contains six essays, from a primarily Russian perspective, which provide an in-depth analysis of the political, social, economic, and military context for and causes of the war, the nature of wartime military operations, the human and material costs of the brief struggle, and the war's likely implications for the future.

Russia's Military Modernisation: An Assessment The International Institute for Strategic Studies (IISS), 2020-09-29 This new IISS Strategic Dossier examines the recent development of Moscow's armed forces and military capabilities. It analyses the aspirations underpinning Russia's military reform programme and its successes as well as its failures. The book also provides insights into Russia's operational use of its armed forces, including in the intervention in Syria, the goals and results of recent state armament programmes, and the trajectory of future developments. This full-colour volume includes more than 50 graphics, maps and charts and over 70 images, and contains chapters on: Russia's armed forces since the end of the Cold War Strategic forces Ground forces Naval forces Aerospace forces Russia's approach to military decision-making and joint operations Economics and industry At a time when Russia's relations with many of its neighbours are increasingly strained, and amid renewed concern about the risk of an armed clash, this dossier is essential reading for understanding the state, capabilities and future of Russia's armed forces.

War in Ukraine Tom Cooper,Adrien Fontanellaz,Edward Crowther,Milos Sipos,2023-05-18 On 24 February 2022, eight years after invading the Crimean Peninsula of Ukraine and organizing an illegal referendum in support of a subsequent Russian annexation, President of the Russian Federation Vladimir Putin ordered a full-scale invasion of Ukraine. Both Western and Russian intelligence services expected the invasion to quickly topple the democratically elected government in Kyiv and, with the help of collaborators, to overrun the Ukrainian armed forces in a matter of between 3 and 14 days. Early on 24 February, the Armed Forces of the Russian Federation (VSRF) launched a series of missile and artillery strikes on the main air bases and dozens of other military facilities in Ukraine. Immediately afterwards, the VSRF launched a ground invasion, with its forces advancing on Kyiv, Chernihiv, Kharkiv, Mariupol, Melitopol, and Kherson. Although following a build-up that had begun in April 2021, and expected by many, the onslaught still came as a major surprise for the Ukrainian government, the Ukrainian armed forces, and the majority of its allies in the West, and also for the mass of officers and other ranks of the VSRF, many of whom believed that they were only to participate in exercises. However, the deeper the Russians rolled into Ukraine, the more resistance they encountered: while some Russian units performed as expected, elsewhere whole armies began falling apart when ordered to advance at maximum possible speed without the necessary firepower and logistic support. After suffering catastrophic losses while failing to reach downtown Kyiv, and failing to reach and enter Chernihiv and Kharkiv, the war in northern and north-eastern Ukraine quickly settled down into a bloody stalemate. In the south, the Russians initially advanced at an astonishing rate, securing Melitopol during the second day of their invasion, and Kherson

only a few days later. It was only once President Putin attempted to accelerate the rate of advance through ordering heliborne operations deeper into Ukraine that the VSRF suffered a severe blow in the fighting for Voznesensk and Mykolaiv, and its advance in this part of the country also came to an end. Richly illustrated with color photography and full color artworks, and providing a detailed study of the organization and order of battle of the armed forces involved on both sides, Volume 2 of War in Ukraine provides the first detailed account of the first two weeks of the Russian invasion of Ukraine in 2022.

Russian Tactical Aviation Dmitriy Komissarov, Yefim Gordon, 2017 The Tactical Aviation branch (FA- Frontovaya aviatsiya) has always occupied an important place in the structure of the Soviet, and subsequently Russian, Air Force. In the 20-odd post-Soviet years the Russian Air Force has been repeatedly reformed and in the course of the reforms the importance of Tactical Aviation has risen. The brief military conflict with Georgia in August 2008 highlighted poor organization of operations and in 2009 the customary air armies, air divisions and air regiments were replaced by aviation bases. Much importance has attached to fleet renewal and upgrading of the Russian Tactical Aviation capability. The Su-35S 'Generation 4++' single-seat fighter is entering full-scale production and service. Deliveries of single-seat Su-27SM3 (a mid-life update) and two-seat Su-30SM and Su-30M2 multi-role fighters are also underway. The Beriev A-50 AWACS aircraft, which supports the Tactical Aviation's air defense role, are also being updated. Production and deliveries of the Su-34 tactical bomber are continuing and for want of a next-generation attack aircraft, the Russian Air Force is continuing to upgrade its Su-25 fleet--the latest Su-25SM3 is now in service. Much attention has been paid to combat training. Exercises are being held

more frequently than in the 1990s and in-flight refuelling of various aircraft, including tactical bombers, is practiced on a much wider scale than before, as are long-range flights by groups of fighters. The book, companion to the highly successful Soviet Tactical Aviation, illustrates the current state of the Russian Air Force's tactical aviation as well as its recent history in various overseas conflicts. Details are given of the aviation bases (units), their locations and the principal types currently in service. Russian Tactical Aviation is illustrated throughout with many previously unpublished photos, including air-to-air shots during recent Russian Force exercises, as well as color profiles of Russian tactical aircraft and helicopters operated by various aviation bases.

Air-to-Air Refuelling Aircraft Chris Gibson, 2022-06-20 Modern strategists talk about “force multipliers,” and, for air operations, air-to-air refueling is without doubt the greatest force multiplier of all. In-flight refueling has allowed not only the longest bombing missions in history but also persistence in air defense, transport reach and flexibility in ground-attack tasks. Covering a range of refuelers — including the Boeing KC-97 and KC-135, Vickers Valiant, Handley Page Victor, Lockheed TriStar, Vickers VC10, McDonnell Douglas KC-10 and the Airbus MRTT Voyager — this book details the history of air-to-air refueling and celebrates the key role played by tanker aircraft in the application of air power around the world.

OKB Sukhoi Vladimir Antonov, 1996 Thoroughly documents the famous Russian aircraft design bureau.

Raising Red Flags N.R. Jenzen-Jones, Jonathan Ferguson, 2014-11-18 This report examines the significant range of arms and munitions carried and employed throughout the conflict by armed individuals

on all sides. It also examines, somewhat less extensively, the range of armoured vehicles and aircraft observed in the conflict. This report examines over 100 distinct weapons systems, over 60 different types of munitions, and over 70 different models of armoured fighting vehicles, as well as miscellaneous associated materiel, in the context of the ongoing conflict in Ukraine. Particular attention is paid to items which may indicate flows of arms and munitions into and within the affected areas of Ukraine. Beginning with an assessment of the arms and munitions employed during the initial unrest in Kiev, in February 2012, the report documents relevant materiel up until the time of publication
