Yefim Gordon,Dmitriy Komissarov

Sukhoi Su-7/Su-17 E. Gordon, Yefim Gordon, Dmitriy Komissarov, 2011 Following on from the collection of successful 'Famous Russian Aircraft' titles, Yefim Gordon has teamed up with Keith Dexter and Dmitriy Komissarov to produce this insight into the Sukhoi fighter bomber family. In the early 1950s the reborn aircraft design bureau headed by Pavel O. Sukhoi started its renewed activities by creating two aircraft sharing the same fuselage design and powerplant – the delta-wing T-3 and the swept-wing S-1. The former became the progenitor of several interceptors, starting with the Su-9; the other aircraft became the Su-7 tactical fighter but soon evolved into the Su-7B fighter-bomber. Known to the West as the Fitter, the Su-7B and its improved Su-7BM and Su-7BKL versions formed the backbone of the Soviet fighter-bomber aviation. They were also exported to many friendly nations – first and foremost to some Warsaw Pact member states (Poland and Czechoslovakia), as well as to non-aligned nations like India, Algeria, Egypt, Iraq and others. The Fitter saw action in quite a few wars – the Indo-Pakistani border conflict of 1971, the Arab-Israeli wars. The initial Su-7 Fitter-A was

superseded by the Su-17 which differed primarily in having variable-geometry wings. The prototype made its maiden flight in 1966; the production version completely supplanted the original Su-7 in Soviet Air Force service in the 1980s. The swing-wing Su-17 proved highly efficient in the Afghan War, earning the affection of the pilots who flew it. Its high combat capabilities were duly recognized abroad; apart from the Warsaw Pact (Poland, Czechoslovakia, East Germany, Hungary and Bulgaria), the Su-20 and Su-22 export variants were delivered to Egypt, Iraq, Peru, Yemen, Afghanistan and other nations. Iraq used its Su-22s against Iran in the war of 1980-88, and the ultimate Su-22M4 is still in service with the Polish Air Force – albeit with upgrades to make it compatible with NATO operational standards. This new title written by 3 aviation enthusiasts, including expert in the field Yefim Gordon, and is illustrated with a whole host of unpublished photos, as well as numerous line drawings and colour side views, which will undoubtedly be of interest to aviation enthusiasts and scale modellers alike. The in service and operators chapters feature insignia and unit badges/nose art worn by individual aircraft, making this a must have for any aviation and scale model enthusiast's collection.

Polish Wings Dariusz Karnas, 2009-08-31 The Polish Air Force was a major user of Sukhoi's heavyweight fighter-bombers for more than 30 years. Starting with delivery of the Su-7BM in 1964, with the -BKL variant following from 1966 and eight 2-seat Su-7Us from 1969, the Poles then operated the swing-wing Su-20 from 1974 to 1997. This new volume in the Polish Wings series describes and illustrates all these Polish Sukhois, with full details of all the airframes and their fates, detailed description of color schemes and markings, as well as many color photos and color profiles. This book is an invaluable reference source for aircraft historians and enthusiasts, and scale modelers.

Sukhoi SU-7/17/22 Yefim Gordon, 2004

Aerofax: Sukhoi Su-7/17/22 Yefim Gordon, 2004-05 Thorough Aerofax-series coverage is given here to the 'Fitter' family of Soviet fighters and fighter-bombers, with masses of fresh information and images emerging from previously unseen Russian sources. The Su-7 was first flown in 1958, with deliveries to the Soviet Air Force beginning in the same year. It could be seen as the Soviet contemporary of the F-100 Super Sabre. The original high-speed, highly-maneuverable single-seat

fighter was developed in several versions and produced in large numbers for the VVS and Warsaw Pact countries during the 1960s. It was developed in the late 1960s with a completely new variable-sweep wing as the Su-17 fighter-bomber, again further modified during its long life to take on many other roles including reconnaissance, training and so on. The Su-22 was an export version of the Su-17, and the 'Fitter' family has served with many air forces in Europe, Libya, Peru, Vietnam and Syria.

Tupolev Tu-16 Badger Yefim Gordon,Vladimir Rigmant,2004-06-21 The establishment of NATO posed the need for the Soviet war machine to create a fast jet bomber capable of reaching targets throughout Western Europe and combatting the carrier task forces with which the US Navy could throw its weight around the world. The basic Tu-16 which first flew in the mid-1950s was developed into nearly 50 versions adopted for various roles, including nuclear-capable bombers, anti-shipping missile strike aircraft, torpedo-bombers and minelayers, numerous reconnaissance and ECM variants, assorted development aircraft for testing new engines, avionics and systems. The Tu-16 even found

civil uses as a fast mailplane and a weather research/rainmaking aircraft! The Badger, as the bomber was known to the West, served as the basis for the Soviet Union's first jet airliner, the Tu-104. The nearly 1,500 Tu-16s built in the Soviet Union were an important factor in preventing all-out military confrontation between the East and the West. Since the mid-1950s and until the 1980s the Badger has been a regular picture on the pages of the Western press, snooping around Western naval groups every now and then. The type also had its share of 'hot' wars, getting its baptism of fire in the Six-Day War of 1967. Apart from three factories in the USSR, the Tu-16 was built under license in China as the H-6 and remains in service with the People's Liberation Army Air Force. Other foreign users were Egypt, Indonesia and Iraq. All known versions are described and a full account is given of the Tu-16's operational career in the USSR and abroad during the Cold War and in the days after that when many of the surviving Badgers were used as target drones. The book features many previously unpublished photos and a detailed production list.

Korea North Air Force Handbook Volume 1 Strategic Information and Weapon Systems IBP USA,

Sukhoi Su-25: Famous Russian Aircraft Yefim Gordon,E. Gordon,Dmitriy Komissarov,2020 The

Su-25 ground attack aircraft made its first flight on February 22, 1972. After five years of tests the aircraft reached its definitive configuration with new engines, a revised airframe and new armament, entering certification trials which were completed in 1981. A year earlier, however, the initial production Su-25 had received its baptism of fire in the Afghan War. Gradually the Su-25 became the progenitor of a family. The Su-25UB combat trainer came first; the single-seater and two-seater were also built for export as the Su-25K/Su-25UBK. A new line of development began in 1979 with a series of single-seat 'tank buster' variants based on the Su-25UB's airframe but featuring more advanced sighting systems and weapons. The first of these was the Su-25T of 1984, followed by Su-25TM (Su-39) of 1993 making the Su-25 in the end the sole Russian light attack aircraft. The Su-25 has been widely exported, serving with air forces in Europe, Asia, the Middle East, Africa and South America. Apart from the Afghan War, it has seen action in Iraq, Angola, Congo, Eritrea, Ethiopia, Macedonia, Côte d'Ivoire, Sudan and in conflicts between the former Soviet republics. More recently the Frogfoot has

been used in the Russian participation in the civil war in Syria War. The book describes the full development and service history of the Su-25, featuring fleet lists and a design descriptions. It is illustrated throughout with numerous photos and color profiles.

Sukhoi Su-57-Op/HS Yefim Gordon,Dmitriy Komissarov,2021 As early as 1979, Soviet aircraft designers started work on a program called I-90, a fighter for the 1990s. Two Soviet aircraft design bureaus took on the task, Mikoyan and Sukhoi. Work began in 1983 but with the dissolution of the Soviet Union the project stalled. In 2002 the Russian government kicked off a new program under which Sukhoi began development of what was then known as PAK FA (Future Tactical Aviation Aircraft System). Known in house as the T-50, this aircraft strongly resembled the American F-22 Raptor in overall appearance. The first prototype took to the air on January 29, 2010 and in 2017 the fighter was allocated the service designation Su-57. In 2018 the aircraft had its combat debut when four of the prototypes were briefly deployed to Syria during the Russian campaign against the IS terror network in that country. Production was officially launched in May 2019, with the Russian Air Force

having 70-plus on order. This work charts the development and trials history of the 1.44, Su-47 and Su-57, as well as other project versions that did not make it to the hardware stage. It is illustrated with numerous previously unpublished photos and drawings.

Soviet Aircraft Industry Peter G Dancey, 2017-04-22 Soviet aircraft industry was an essential part of the USSR's campaign for global dominance in the twentieth century. Thanks to the thick fog of secrecy that enveloped it throughout the Cold War, it has long inspired the fascination of analysts and enthusiasts in the West; until the collapse of the USSR in 1991, details of Soviet aircraft were often a matter of conjecture. This book aims to uncover fully the mystery surrounding this topic. Drawing on original and previously unpublished information obtained directly from the former USSR, *Soviet Aircraft Industry* examines the unique characteristics of Soviet-designed aircraft—particularly military types, which were the cause of great concern to the West. Further, by virtue of the industry's central role throughout Soviet history, this book provides a rare and important perspective into the broader theme of Russia's great communist experiment.

A Compendium of Armaments and Military Hardware (Routledge Revivals) Christopher

Chant, 2014-06-03 First published in 1987, *The Compendium of Armaments and Military Hardware* provides, within a single volume, the salient technical and operational details of the most important weapons. The complete range of hardware used in land, sea and air forces throughout the world at the time of publication is covered, from tanks to rocket systems, helicopters to cruise missiles, alongside full details of size, weight and operational range. The book's main strength lies in the detail it gives of armament and associated ammunition capabilities, and of the sensors and other electronics required for the weapons to be used effectively. A key title amongst Routledge reference reissues, Christopher Chant's important work will be of great value to students and professionals requiring a comprehensive and accessible reference guide, as well as to weapons 'buffs'.

Sukhoi Su-27 & 30/33/34/35: Famous Russian Aircraft Yefim Gordon, Dmitriy Komissarov, 2018-10

The Sukhoi Design Bureau was tasked in 1969 with developing a fourth-generation heavy fighter and thus began the story of the Su-27, known to the western world as the Flanker--an aircraft which turned

out to be one of the most successful Soviet fighter designs. This book tells the story of how the original project developed, how the final configuration of what was known as the T-10 was selected and why the brave decision to scrap the original project and rework it as the T-10S was taken, a decision that proved to be justified. The book covers the design and testing of the prototypes in both configurations, the production entry of the basic Su-27 single-seat fighter and the Su-27UB two-seat combat trainer together with the efforts of Sukhoi to keep them up to date with mid-life upgrades to Generation 4++' (Su-35S) level. The operational histories of Su-27 versions including the Su-30/Su-34/Su-35 are also described. When the Soviet Navy decided to bolster its fleet with carriers optimized for conventional take-off and landing (CTOL) aircraft, Sukhoi responded by developing the Su-27K, which later entered service as the Su-33, Russia's first operational CTOL shipboard fighter. These naval variants are included in the book as is a chapter describing the story of how China purchased license manufacturing rights for the Su-27 and went on to develop its own versions with indigenous avionics and weapons, including the basic J-11 fighter and the J-15 Flying Shark--a clone

of the Su-33. The post-Soviet republics included, the Su-27/Su-30/Su-34/Su-35 family has seen service with nearly 20 nations, including places as far apart as Vietnam, Malaysia, Ethiopia, Indonesia, Angola, India and Venezuela. The book describes in depth the development and operational career of the Su-27 family, including mid-life upgrades and the latest variants, and features detailed fleet lists. Richly illustrated with color photographs, line drawings and color profiles of the various color schemes carried by the type, this is the definitive work on a truly outstanding aircraft.

Sukhoi S-37 and Mikoyan Mfi Yefim Gordon, 2001 Conceived in the early 1980s to ease the threat posed by the American ATF program, these fighters were developed as the Soviet Union's fifth-generation fighters. This book gives a detailed account of how Russia's two leading fighter aircraft designers competed for the order and how a third contender never made it to the hardware stage. It deals with the way these aircraft were conceived, designed, built, and flown.

Sound Barrier Peter Caygill, 2006-10-30 As the speed of early aircraft gradually increased there eventually became an awareness during the 1940's, that strange things were occurring at around

500mph. Many later WW2 fighter aircraft were reported to become dangerously uncontrollable in high-speed power dives. Pilot's and aircraft designers were beginning to encounter the sound barrier. We now realize it to be a phenomenon that occurs when the speed of sound is reached and air compressibility demands additional power to break through it. Breaking the sound barrier became one of the biggest challenges to the world's aircraft designers and it took great courage and daring for the test-pilots of that era to find the way through this difficult obstacle. This is the story of how innovative design and pilots learned how to deal with supersonic flight. It records the many different experimental aircraft and tells of the experiences of those that flew them. Many pilots lost their lives during those dangerous flights but those who survived became legendary.

Luftwaffe Aces Franz Kurowski, 2004-09-20 World War II air war companion to *Panzer Aces* and *Panzer Aces II*. In-the-cockpit accounts of aerial dogfights by some of Germany's deadliest pilots ever to take to the skies.

Israeli Mirage III and Nesher Aces Shlomo Aloni, 2012-12-20 Israeli delta fighters pilots have been

credited with almost 300 kills between 1966 and 1974, and dozens of them became aces. The Israeli aerial kill exchange rate and overall air-to-air performance was phenomenal. Although the Israeli pilots were flying Mach 2 fighters, they lacked any modern radar equipment and their MiG-21 flying opponents should have had a performance edge over them. This book details their most significant engagements, many of which were essentially World War 2 style dogfights fought with jet aircraft. Because neither side had the combat edge to disengage at will most engagements were a life and death struggle and the introduction of air-to-air missiles and the Israeli Nesher was to prove decisive in this theatre.

Air Force Magazine ,1995-07

Flashpoints Michael Napier,2022-06-09 From acclaimed aviation historian Michael Napier, this is a highly illustrated survey of the aerial fighting in the flashpoints of the Cold War. The Cold War years were a period of unprecedented peace in Europe, yet they also saw a number of localised but nonetheless very intense wars throughout the wider world in which air power played a vital role.

Flashpoints describes eight of these Cold War conflicts: the Suez Crisis of 1956, the Congo Crisis of 1960–65, the Indo-Pakistan Wars of 1965 and 1971, the Arab-Israeli Wars of 1967 and 1973, the Falklands War of 1982 and the Iran–Iraq War of 1980–88. In all of them both sides had a credible air force equipped with modern types, and air power shaped the final outcome. Acclaimed aviation historian Michael Napier details the wide range of aircraft types used and the development of tactics over the period. The postwar years saw a revolution in aviation technology and design, particularly in the fields of missile development and electronic warfare, and these conflicts saw some of the most modern technology that the NATO and Warsaw Pact forces deployed, alongside some relatively obscure aircraft types such as the Westland Wyvern and the Folland Gnat. Highly illustrated, with over 240 images and maps, Flashpoints is an authoritative account of the most important air wars of the Cold War.

Russia's Top Guns ,1990

Cockpits of the Cold War Donald Nijboer,2003 This pictorial book looks inside the cockpit of

aircraft from 1947 to 1965 from the United States, United Kingdom, Sweden, Canada, France and the Soviet Union. Featured aircraft includes a pilot's perspective on what it was like to fly.

The Sukhoi Su-24 Stanislaw Krzysztof Mokwa,2020-02-19 Su-24 (Fencer) is a Soviet jet bomber with variable-geometry wings. The aircraft was supposed to be a response to the American F-111, and therefore it's structurally similar. Su-24 can operate in any weather conditions, also at night. It was designed to carry tactical nuclear weapons. In the 1960s, the military command of the Soviet Union set requirements for a new attack aircraft that would be able to operate despite strong ant-aircraft defense of NATO troops. An aircraft was expected to fly on a very low altitude at a very high speeds. Initially, it was based on Su-7 and Su-15 airframes, but due to the decision to use variable-geometry wing, it was necessary to build a completely new structure. Variable geometry allowed to achieve high speeds while maintaining good takeoff and landing characteristics. This is how Su-24 was born. The first prototype was flown on July 2, 1967 (marked as T6-1), and the second on January 17, 1970 (T6-2I). Variable-geometry wings were only used in the second prototype. In December 1971, the first serial

Su-24 was built, but due to the prolonged acceptance tests (lasting until 1974), the aircraft officially did not become operational until February 1975. Su-24 was named Fencer in the NATO code.
