ACARS - A Users Guide Lionel K. Anderson MSc,2010-07-07 Aircraft Communications Addressing and Reporting System (ACARS) is a digital datalink system for transmission of short,and relatively simple messages between aircraft and ground stations using the airband VHF radio link. The message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service.

Canadian MiG Flights Harold Skaarup,2008-05 This book is a collection of there I was stories highlighting the experiences of Canadian Forces pilots who have had the opportunity of a lifetime to fly in the combat aircraft operated by former adversaries. Technical descriptions of key Soviet-built fighter jets such as the MiG-15, MiG-21, MiG-23, MiG-25, MiG-29, Sukhoi Su-22 and Su-27 are included for general reference. The Canadian Fighter pilots mentioned in the story have generously provided their observations and comments on their specific experiences of flight in aircraft such as the MiG-29 (NATO codenamed Fulcrum), Sukhoi Su-22 (codenamed Fitter) and Su-27 (codenamed Flanker), both in Canada and overseas. The stories as told first hand by the pilots who contributed them should provide interesting reading for aviation enthusiasts of all ages. An Annex listing aircraft known to have been brought to the West by defecting pilots since 1949 is also included. The Annex briefly describes pilots and aircraft and the circumstances that brought the various defectors to the west, including the MiG-15 flown to South Korea by Lieutenant No Kum-Sok and the MiG-25 flown to Japan by Lieutenant Viktor Belenko. Brief details of Soviet-built aircraft later flown in NATO opposition force flight test programs are also included.

Sukhoi Su-25 Frogfoot Alexander Mladenov,2013-09-20 A fully illustrated technical guide to the Sukhoi Su-25 Frogfoot. The Sukhoi Su-25 Frogfoot was the Soviet Air Force's first mass-produced jet purposely designed for the close air support (CAS) role and was a simple, effective and durable attack aircraft that, by 2012, had seen combat in no fewer than 40 conflicts. Some 630 Su-25s were built between 1979 and 1991, as well as 185 export Su-25Ks, 70 Su-25UB/UBK Frogfoot-B two-seaters that rolled off the production line at the aviation plant in Ulan Ude (UUAP), Russia. The Frogfoot is known as the most cost-effective ground attack aircraft available to the Russian Air Force (RuAF) and, between the RuAF and the Russian Navy's aviation assets, there are some 200–220 Su-25s still in operation. Illustrated throughout with photographs and colour artwork, this title examines the development history, evolution and combat performance of the Su-25 Frogfoot, and details its effectiveness and reliability. Such is the reputation the Su-25 has earned, 19 of the 25 nations to have deployed a Frogfoot variant continue to operate them today.

Aircraft Design Mohammad H. Sadraey,2012-11-28 A comprehensive approach to the air vehicle design process using the principles of systems engineering Due to the high cost and the risks associated with development, complex aircraft systems have become a prime candidate for the adoption of systems engineering methodologies. This book presents the entire process of aircraft design based on a systems engineering approach from conceptual design phase, through to preliminary design phase and to detail design phase. Presenting in one volume the methodologies behind aircraft design, this book covers the components and the issues affected by design procedures. The basic topics that are essential to the process, such as aerodynamics, flight stability and control, aero-structure, and aircraft performance are reviewed in various chapters where required. Based on these fundamentals and design requirements, the author explains the design process in a holistic manner to emphasise the integration of the individual components into the overall design. Throughout the book the various design options are considered and weighed against each other, to give readers a practical understanding of the process overall. Readers with knowledge of the fundamental concepts of aerodynamics, propulsion, aero-structure, and flight dynamics will find this book ideal to progress towards the next stage in their understanding of the topic. Furthermore, the broad variety of design techniques covered ensures that readers have the freedom and flexibility to satisfy the design requirements when approaching real-world projects. Key features: • Provides full coverage of the design aspects of an air vehicle including: aeronautical concepts, design techniques and design flowcharts • Features end of chapter problems to reinforce the learning process as well as fully solved design examples at component level • Includes fundamental explanations for aeronautical engineering students and practicing engineers • Features a solutions manual to sample questions on the book's companion website Companion website - www.wiley.com/go/sadraey

The Future of Military Engines Andrew P. Hunter,Gabriel Coll,Asya Akca,Schuyler Moore,2021-10-08 This CSIS report describes how DoD's investment in military aircraft engines will decrease significantly, presenting a challenge for the industrial base. The report also argues that DoD must make four major policy choices in its investment approach to military engines: priority, resources, business model, and competition.

The Military Balance in the Middle East Anthony H. Cordesman,2004-09-30 Noted Middle East military expert Anthony H. Cordesman details the complex trends that come into play in determining the military balance in a region that has become so critical to world peace. This ready resource provides a wealth of information on military expenditures and major arms systems, as well as qualitative trends, by country and by zone. However, as Cordesman stresses, because the greater Middle East is more a matter of rhetoric than military reality, mere data summarizing trends in 23 different countries is no substitute for a substantive explanation. Using tables, graphs, and charts, this study explores every aspect of the regional military balance with attention to sub-regional balances, internal civil conflicts, and low level border tensions. The Middle East is certainly one of the most militarized areas in the world, and changes in technology, access to weapons of mass destruction, and political instability contribute to a situation that has long been in constant flux. Some of the regional flashpoints covered in this study include the Maghreb (North Africa); the Arab-Israeli conflict (dominated by Israel versus Syria); and the Gulf (divided into those states that view Iran as the primary threat and those who lived in fear of Iraq). Internal conflicts, such as those in Mauritania, Algeria, Libya, Egypt, Sudan, Bahrain, Saudi Arabia, Iraq, and Yemen, increasingly dominate regional tensions. In addition, border conflicts within the region and with neighboring countries could further aggravate the delicate balance.

Subsonic versus Supersonic Business Jets - Full Concept Comparison considering Technical, Environmental and Economic Aspects Michael Hans-Reichel,2012-01-18 Inhaltsangabe:Introduction: On the 26th of August 2010 the new ultra-large-cabin ultra-long-range Gulfstream G650 business jet reached Mach 0.995 during its flight test campaign (1). This is almost the speed of sound (Mach 1) and inspires one to say, why not fly faster than the speed of sound! Reduce travelling time in the commercial business aviation segment. This is, however not a completely new vision. Many companies and research facilities have already spent a lot of time and investment in studies to investigate the feasibility of supersonic flight. Entry Into Service (EIS) for the new Gulfstream G650 is scheduled for 2012. In the following the main performance parameter of the G650 aircraft will be summarised. The parameters range, cruise speed, MTOW, etc. have been selected and serve as a basis to allow an appropriate comparison between the G650 as the latest high end Subsonic Business Jet and potential in future Supersonic Business Jets (SSBJ) within this subject Master Thesis. With the impressive maximum range of nearly 13,000 km the G650 can connect Dubai with New York or London with Buenos Aires within almost 14 hours. Maximum Range @ Normal Cruise Speed: 7,000 nm/12,964 km. Normal Cruise Speed Mach: 0.85/904 km/h. Mmo (Maximum Operating Mach Number): Mach 0.925. Maximum Cruise Altitude: 51,000 ft/15,545 m. Maximum Takeoff Weight (MTOW): 99,600 lb/45,178 kg. Maximum Fuel Weight: 44,200 lb/20,049 kg. Passengers: 11 18. Price: appr. 60-70 million USD. Gulfstream business rival Bombardier Aerospace also announced in October 2010 two new high end models, the Global 7000 and 8000 with a maximum range of 7,300 nm (13,520 km) and 7,900 nm (14,631 km) at cruise speed Mach 0.85. Entry Into Service is scheduled for 2016 (Global 7000) and 2017 (Global 8000). A comprehensive overview of business jets in service and in development is given in attachment 13.1. A Supersonic Business Jet flying at Mach 2 cruise speed could virtually halve the travelling time, which would enormously enhance the mobility and flexibility. In order to achieve this ambition a paradigm shift is required. New technologies must be established, the impact on the environment must be understood and minimised, existing regulations must be changed to permit overland flight restrictions and the product still needs to be economically viable. All of the above aspects must be considered and will be subject for discussion within this Master Thesis (See also figure [...])

Israel and Syria Anthony H. Cordesman,Aram Nerguizian,Inout C. Popescu,2008-07-30 Israel and Syria: The Military Balance and Prospects of War provides a detailed and current picture of the military capabilities of Israel and Syria, reflecting the changes and lessons of the Israel-Hezbollah War in 2006 and other recent conflicts. It offers extensive analysis, supported by tables and charts, on the trends in military spending, arms imports and technology transfers, military manpower, weapons, and orders of battle. By going beyond military balance analysis, Cordesman examines the probable nature and results of a future war and how the readiness, capability, tactics, and technology on each side would shape its outcome. Israel and Syria: The Military Balance and Prospects of War shows how a dangerous new conflict between both nations would cripple all strides in strategic gains and Israeli-Syrian diplomacy. On the other hand, peace negotiations would offer a safer, more productive relationship. Israel and Syria need to consider the true nature of their military balance and the undermining effect to both nations as well as the costs and risks of any future conflict. Although Syria does retain important options in terms of asymmetric and proxy conflicts, it would fail in its attempt to recapture the Golan. While Israel would almost certainly win a future war, it cannot make gains from acquiring more Syrian territory and a new war would create major problems with its neighbors and in dealing with the Palestinians. The risk of a new Israeli-Syrian conflict is so serious that both sides need to understand the true nature of their military balance, and the costs and risks of any future conflict. Israel and Syria: The Military Balance and Prospects of War shows how dangerous a new conflict could be, that neither side can make lasting strategic gains from a future conflict, and that peace negotiations offer a far safer and more productive option. It provides a detailed and current picture of the military capabilities of Israel and Syria, reflecting the changes and lessons of the Israel-Hezbollah War in 2006 and other recent conflicts. Israel and Syria: The Military Balance and Prospects of War provides extensive analysis, supported by tables and charts, on the trends in military spending, arms imports and technology transfers, military manpower, weapons, and orders of battle. By going beyond military balance analysis, Cordesman examines the probable nature and results of a future war and how the readiness, capability, tactics, and technology on each side would shape its outcome.

A Century of Triumph Christopher Chant,2002 On December 17, 1903, on the windswept beaches of Kitty Hawk, North Carolina, Orville Wright piloted the world's first powered flight, in one of the most famous moments in history. Within a few short years, airplanes of various designs were lifting into the air over Europe and America. Soon, the entire world was caught up in the fevered advance of flight and airplanes, Zeppelins, autogyros and helicopters were making the world a much smaller place. To celebrate the first full century of powered flight premier aviation historian Christopher Chant and world-famous illustrator John Batchelor have joined forces to showcase an astonishing march of progress. From the early experiments of gliderman Otto Lilienthal to the moon walk of Neil Armstrong, it has indeed been A Century of Triumph. From the golden age of Zeppelins to the extreme design experiments of World War II to the fierce modernism of supersonic fighter jets, A CENTURY OF TRIUMPH demonstrates the full richness of mankind's flying craft. In addition to Batchelor's illustrations, the book features never-before-published vintage watercolour posters of pre-World War I aviation races and a treasure trove of photographs. Chant's text combines full histories of the planes themselves with biographical essays on some of the great figures of the twentieth century: the Barnstormers, Igor Sikorsky, Amelia Earhart, Chuck Yeager, and the Apollo XVII astronauts, among others. A CENTURY OF TRUMPH is a visual and factual feast for anyone who marvels at the majesty of flying.

1998 Strategic Assessment Engaging Power For Peace ,1998 Over the past few years the Department of Defense has been intensifying its study of the global security situation, U.S. force posture, and future defense requirements. The National Defense University contributes to this dialog through Strategic Assessment, an annual publication which applies the expertise of this institution through the leadership of its interdisciplinary research arm, the Institute for National Strategic Studies, with the assistance of specialists from elsewhere in government and academe. Offering such analyses, in both general and particular areas of interest to the

national security community is an important aspect of the NDU mission. This volume examines various approaches that the United States might adopt to shape the strategic environment of the future. The current environment is characterized by instability and change. The U.S. Government needs to apply the full range of options at its disposal to achieve national goals and ensure the peace and stability required to preserve our rights to life, liberty, and the pursuit of happiness. But such options must be studied and conceptualized for years (and in some cases, decades) in advance to take advantage of the opportunities presented by a changing global environment. The recent Quadrennial Defense Review (QDR) recommended a series of defense posture changes. This volume reviews these recommendations and takes the next analytical step, to propose what is entailed by such changes. Strategic Assessment 1998: Engaging Power for Peace should prove useful beyond the defense establishment, to all readers with an interest in national security affairs.
