**The Last Stand of the Orangutan** United Nations Environment Programme, 2007 This publication has been carried out on behalf of the Great Ape Survival Partnership (GRASP), established by UNEP and UNESCO in collaboration with a wide range of non-governmental organisations in response to growing concern over the plight of the orangutan, the chimpanzee, the bonobo and the gorilla. The report used the latest satellite imagery and data from the Government of Indonesia to assess changes in the forests of one part of south-east Asia. The results indicate that illegal logging, fires and the plantation of crops such as palm oil are intruding extensively into Indonesia's national parks, the last safehold of the orangutan. The orangutans share this habitat with a wide range of other threatened and ecologically important species including the Sumatran tiger, Sumatran rhinoceros and Asian elephant.

*Orangutans and the Economics of Sustainable Forest Management in Sumatra* Serge A. Wich, 2011 This report focuses on the habitat of the charismatic - but critically endangered - Sumatran orangutan. It offers an overview of the many ecosystem services that the orangutan's forest habitat provides in Sumatra and how estimates for revenue from payments for ecosystem service schemes compare with revenue from other land-use scenarios. This report also aims to emphasize the strong link that exists between biodiversity, ecosystem services and human well-being, to raise awareness and to seek more careful management of natural resources.

The Orangutans Gisela Kaplan, Lesley J. Rogers, 2000-06-21 An intimate look at the most humanlike primates on the face of the Earth.

**Among Orangutans** Carel van Schaik, 2004 The local people know him as the Man of the Forest, who refused to speak for fear of being put to work. And indeed the bear-like Sumatran orangutan, with his moon face, lanky arms, and shaggy red hair, does seem uncannily human; one of our closest relatives in the animal kingdom, the orangutan may have much to tell us about the origins of human intelligence, technology, and culture. In this book one of the world's leading experts on Sumatran orangutans, working in collaboration with nature photographer Perry van Duijnhoven, takes us deep into the disappearing world of these captivating primates. In a narrative that is part adventure, part field journal, part call to conscience, Carel van Schaik introduces us to the colorful characters and complex lives of the orangutans who inhabit the vanishing forests of Sumatra. In compelling words and pictures, we come to know the personalities and temperaments of our primate cousins as they go about their days: building double-decker tree nests; using leaves as napkins, gloves, rain hats, and blankets, and sticks as backscratchers and probes; nurturing their infants longer and more intensely than any other nonhuman mammal. Here are the births and deaths, the first use of a tool, the defeat of a rival, the gradual loss of influence that, while fascinating to observe, may also help us to reconstruct human evolution.

**The Neglected Ape** Biruté M.F. Galdikas, R.D. Nadler, N. Rosen, Lori K. Sheeran, 2013-11-11 The orangutan is the most highly endangered species of

great ape. Orangutans are threatened by deforestation, poaching, the illegal pet trade, and the isolation and fragmentation of dwindling wild populations. Their conservation is impeded by certain aspects of their ecology (e. g. , a rain forest habitat) and certain features of their life history (e. g. , an eight-to twelve-year interbirth interval). Added to the U. S. Endangered Species List in 1970, the orangutan is now clearly on the road to extinction. The number of wild orangutans in Borneo and Sumatra is currently estimated to have decreased to between 12,300 and 20,571 individuals. Only 2% of original orangutan habitat is protected and some of these areas are now being destroyed. Clearly, attention to ecology, demography, censusing, rehabilitation, and conservation is essential if the orangutan is to survive in the wild beyond the next century. The protection of orangutans is a complex, multifaceted problem, involving such pressing issues as human poverty, overpopulation, and the economic development of Southeast Asia. Although the orangutan has been placed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), more orangutans were sold illegally in Taiwan between 1990 and 1993 than are housed in all the world's zoos. In the past, scientific and public attention has centered on the African apes. For this reason, the sole Asian great ape, the orangutan, has been called the neglected ape.

**Orangutans** Serge A. Wich,uci Suci Utami Atmoko,Tatang Mitra Setia,Carel P. van Schaik,2010-01-07 This book describes one of our closest relatives, the orangutan, and the only extant great ape in Asia. It is increasingly clear that orangutan populations show extensive variation in behavioural ecology, morphology, life history, and genes. Indeed, on the strength of the latest genetic and morphological evidence, it has been proposed that orangutans actually constitute two species which diverged more than a million years ago - one on the island of Sumatra the other on Borneo, with the latter comprising three subspecies. This book has two main aims. The first is to carefully compare data from every orangutan research site, examining the differences and similarities between orangutan species, subspecies and populations. The second is to develop a theoretical framework in which these differences and similarities can be explained. To achieve these goals the editors have assembled the world's leading orangutan experts to rigorously synthesize and compare the data, quantify the similarities or differences, and seek to explain them. Orangutans is the first synthesis of orangutan biology to adopt this novel, comparative approach. It analyses and compares the latest data, developing a theoretical framework to explain morphological, life history, and behavioural variation. Intriguingly, not all behavioural differences can be attributed to ecological variation between and within the two islands; relative rates of social learning also appear to have been influential. The book also emphasizes the crucial impact of human settlement on orangutans and looks ahead to the future prospects for the survival of critically endangered natural populations.

**Face to Face with Orangutans** Tim Laman,Cheryl Denise Knott,2009 Describes the orangutan of Borneo in its natural habitat, including information on the threats that now face this incredible primate.

Reaching for the Canopy Kylie Bullo,2015 Temara had done her species proud and proven that captive orangutans do have a place in the jungle of tomorrow. I felt honoured that I was by her side during the first part of her remarkable world-first journey. In 2006, Kylie Bullo and her colleagues at Australia's Perth Zoo were part of a bold, groundbreaking experiment that many experts believed was doomed to failure - to return a zoo-born orangutan to the wild. The orangutan they chose was Temara, a fiery redhead with a will of her own. Temara had always been strong, intelligent, and independent, but preparing for the return to the jungles of her ancestors would put all her best qualities - and those of her keepers - to the test. Reaching for the Canopy is the story of that remarkable journey and of the remarkable woman who helped make it happen. The book proves that the right blend of passion,

compassion, and hard work can achieve what many thought was impossible. It brings new hope to those fighting to bring this magnificent creature back from the brink of extinction. Part of the proceeds on the sale of this book will go towards orangutan conservation projects. \*\*\* Librarians: ebook available on ProQuest and EBSCO ) [Subject: Memoir, Zoology]

Orangutans Buffy Silverman, 2012 Introduces orangutans, describing their behavior, habitat, life cycle, eating habits, and the threats they face from deforestation and poaching.

*Orangutans and Their Battle for Survival* Leif Cocks, 2002 With the arrival of European explorers in Southeast Asia around 300 years ago, the orangutan – the world's second-largest ape and one of our closest biological relatives – began a battle for survival. As the rainforest was cleared and burnt, and the orangutans were poached and sold, remnant populations have dwindled to alarmingly small numbers. This is the amazing story of how a small Australian zoo offers hope for the orangutans, through its very successful captive breeding program. The story is told through the eyes and heart of Leif Cocks, whose personal encounters with the orangutans in his care have enabled him to provide fascinating insights into their unique intelligence and individual personalities. The photographs capture some wonderful moments in the orangutan enclosures at the zoo.

The Future of the Bornean Orangutan Serge A. Wich, Matthew J. Struebig, Johannes Refisch, Andreas Wilting, Stephanie Kramer-Schadt, E. Meijaard, 2015 This report assesses the impacts of land cover change and climate change on Borneo's endangered orangutans. It also examines the major driver of deforestation – the expansion of oil palm – and analyses how various land-use scenarios might impact the region through different climate change projections.

*Orangutan* David Orme, 2005 Introduction to orangutans and the reasons that their numbers have been declining.

*Orangutans* Sheila Dalton, 1990 Describes the life of the orangutan in the wild, including its physical and behavioral characteristics, its mating habits, and its habitat.
