Probe Power Ailynn Collins,2019-08 Probes can explore the depths of space in ways that would kill human beings. The information they provide can spur countless innovations here on Earth. Learn how probes work and the exciting possibilities that their discoveries may inspire.

Great Ball of Fire: Studying the Sun Jonathan Bard,Mariel Bard,2020-07-15 Our solar system would fall apart without the sun. Its gravity is what keeps planets and other celestial bodies moving in orbit. The sun also plays a big role in Earth's weather, climate, and seasons. We wouldn't know of this if we hadn't spent a lot of time over hundreds of years studying the sun. Your young explorers will head to the yellow dwarf star that is our sun with satellites, probes, and through high-powered telescopes. They'll discover what the amazing information missions to and around the sun have taught NASA and space scientists around the world.

The Sun (A True Book) Cody Crane,2021-03-23 It's bright and it's hot. It's the center of our solar system. It is our Sun. As readers journey through this book, they will discover how this amazing star came into existence, and they will learn everything about its size and makeup, its solar winds and flares, and how its light and heat affect Earth. The workings of the sun's magnetic field, sun spots, and the latest technology used to study the sun will also captivate our readers. Planets and stars, moons and galaxies! The universe is a vast and mysterious place with much to explore. And there's no better way to make amazing discoveries about space than with this reimagined series. With the latest NASA imagery, the classic structure and features of A True Book, and lively text, the titles in Our Universe bring the awe of the cosmos directly to readers. Students will come away with a wealth of knowledge about the incredible celestial bodies in our universe. This series covers Next Generation Science Standards core ideas including The Universe and its stars and Earth and the solar system.

The Sun Beth Alesse,2019-06-14 The Sun: Images from Space has extraordinary images of beauty with over 130 incredible details of our Sun taken from space. These images come from Solar Dynamics Observatory (SDO) Mission instruments in conjunction with other various instruments such as those on the Mars Rover. Our Sun, a yellow dwarf star, is the main source of energy for life on Earth. Life grows and thrives because of it. The sun is at the middle of our solar system. Yet until recently, we have not been able to see much of it or even observe its basic characteristics because of its blinding electromagnetic energy. Taken from space, these images were assembled using data collected by NASA and their partners showing our Sun as has not been revealed to us here on Earth, 93 million miles away. See the coronal mass ejections, electric currents, magnetic fields, solar wind, photosphere the chromosphere, the corona, and the hot plasma soup.

A Close-up of the Sun Marcia Neugebauer,R. W. Davies,1978

The Sun to the Earth -- and Beyond National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Solar and Space Physics Survey Committee,2003-07-01 The sun is the source of energy for life on earth and is the strongest modulator of the human physical environment. In fact, the Sun's influence extends throughout the solar system, both through photons, which provide heat, light, and ionization, and through the continuous outflow of a magnetized, supersonic ionized gas known as the solar wind. While the accomplishments of the past decade have answered important questions about the physics of the Sun, the interplanetary medium, and the space environments of Earth and other solar system bodies, they have also highlighted other questions, some of which are long-standing and fundamental. The Sun to the Earth and Beyond organizes these questions in terms of five challenges that are expected to be the focus of scientific investigations in solar and space physics during the coming decade and beyond.

Space Probes David Jefferis,2009 With Space Probes: Exploring Beyond Earth, young readers can learn what a space probe is, what planets have been explored, what is a rover, and what future missions are planned. Includes a How-to Young Astronomer spread, and Internet links that act as stepping-stones to lead inquiring young minds further into the high-tech universe of space exploration. Young readers will thrill at the exciting color photographs of deep space and the machines that probe it.

Solar and Space Physics and Its Role in Space Exploration National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on the Assessment of the Role of Solar and Space Physics in NASA's Space Exploration Initiative,2004-11-11 In February 2004, the President announced a new goal for NASA; to use humans and robots together to explore the Moon, Mars, and beyond. In response to this initiative, NASA has adopted new exploration goals that depend, in part, on solar physics research. These actions raised questions about how the research agenda recommended by the NRC in its 2002 report, The Sun to the Earth and Beyond, which did not reflect the new exploration goals, would be affected. As a result, NASA requested the NRC to review the role solar and space physics should play in support of the new goals. This report presents the results of that review. It considers solar and space physics both as aspects of scientific exploration and in support of enabling future exploration of the solar system. The report provides a series of recommendations about NASA's Sun-Earth Connections program to enable it to meet both of those goals.

Vehicle Technology Considerations for a Solar Probe John A. Foschetti,1963

The Sun Stephen Feinstein,2005 Presents information about the Sun's origins, characteristics, future, and importance to the Earth.

Solar and Space Physics National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on a Decadal Strategy for Solar and Space Physics (Heliophysics),2014-09-25 In 2010, NASA and the National Science Foundation asked the National Research Council to assemble a committee of experts to develop an integrated national strategy that would guide agency investments in solar and space physics for the years 2013-2022. That strategy, the result of nearly 2 years of effort by the survey committee, which worked with more than 100 scientists and engineers on eight supporting study panels, is presented in the 2013 publication, Solar and Space Physics: A Science for a Technological Society. This booklet, designed to be accessible to a broader audience of policymakers and the interested public, summarizes the content of that report.

A Performance Assessment of NASA's Heliophysics Program National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Heliophysics Performance Assessment,2009-04-24 Since the 1990s, the pace of discovery in the field of solar and space physics has accelerated, largely owing to NASA investments in its Heliophysics Great Observatory fleet of spacecraft. These enable researchers to investigate connections between events on the Sun and in the space environment by combining multiple points of view. Recognizing the importance of observations of the Sun-to-Earth system, the National Research Council produced a solar and space physics decadal survey in 2003, laying out the Integrated Research Strategy. This strategy provided a prioritized list of flight missions, plus theory and modeling programs, that would advance the relevant physical theories,

incorporate those theories in models that describe a system of interactions between the Sun and the space environment, obtain data on the system, and analyze and test the adequacy of the theories and models. Five years later, this book measures NASA's progress toward the goals and priorities laid out in the 2003 study. Unfortunately, very little of the recommended priorities will be realized before 2013. Mission cost growth, reordering of survey mission priorities, and unrealized budget assumptions have delayed nearly all of the recommended NASA spacecraft missions. The resulting loss of synergistic capabilities in space will constitute a serious impediment to future progress.

Deep Space Probes Gregory L. Matloff,2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun. Deep-Space Probes Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey. Many technical problems remain to be solved, among them propulsion systems to permit far higher velocities, and technologies to build vehicles a fraction of the size of today's spacecraft. Beyond the range of effective radio control, robot vehicles for exploring deep space will need to be intelligent, 'thinking' craft - able to make vital decisions entirely on their own. Gregory Matloff also looks at the possibility for human travel into interstellar space, and some of the immense problems that such journeys would entail. This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes - a NASA-funded project.

Star Power #2 Cathy Hapka, Ellen Vandenberg,2021-01-12 Can Astronaut Girl save the day with a little help from science? Find out as she and her space crew blast off on new adventures in this chapter book series! Everyone knows that humans can't travel to the sun...at least that's true in the year 2020. But when Astronaut Girl, Wallace, and the Astro crew find themselves orbiting the sun in a solar probe, they soon discover that they've gone almost one thousand years into the future! As they are zipping through space, the heat shields on their spacecraft come loose. They must find a way to fix it and get back to Earth in time for Wallace's family barbecue and before their probe gets baked like a potato! Exciting, easy-to-read books are the stepping stone a young reader needs to bridge the gap between being a beginner and being fluent.
