Brad Elward

Strike Fighters Bill Sweetman, 2008 Introduces the military aircraft known as the F-18 Super Hornet, along with its missions, equipment, weapons, and use in the military.

Super Hornet Lynn Stone, 2004-08-01 Exploring The Us Navy's Newest And Best Multi-Role Fighter Aircraft That Are Fast, Highly Maneuverable, And Are Loaded With Flying Features.

F/A-18E/F Super Hornets Carlos Alvarez, 2011-01-01 The United States Navy uses the Super Hornet to carry out bombing missions and to protect the fleet. Young learners will read about the Super Hornet in action, the history of the Super Hornet, and the weapons and features that make the Super Hornet an effective fighter plane.

F/A-18E/F Super Hornets Denny Von Finn, 2011-08-01 An enemy ship is spotted 30 miles away from a United States Navy aircraft carrier. Sailors scramble to the deck to get F/A-18E/F Super Hornets airborne. Streaking into the sky, the Super Hornets confront the enemy ship and force it to leave U.S. waters. In this title, students will discover the components of the F/A-18E/F Super Hornet and how the Navy uses the jet fighter on different missions.

The Boeing F/a-18E/F Super Hornet and EA-18G Growler Brad Elward, 2012 The story of how the Super Hornet and Growler came into existence is the focus of this new book. The F/A-18E/F has its roots in the late-1980s Hornet 2000 study, which itself evaluated ways to enhance the range, payload, and bring-back capability of the existing F/A-18 Hornet. Through a series of trade-offs imposed by largely limited defense funds, what emerged was a versatile, affordable strike fighter aircraft that has served the Navy well since its fleet introduction in 2002. The Growler has a similar history. Itself an offshoot of the Super Hornet program, the EA-18G brought many of the Super Hornet's attributes - speed, maneuverability, self-defense capability, and advanced systems - into the electronic attack community and is now posed to assume all such missions from the venerable EA-6B Prowler within the next few years. The book draws on interviews with many of the key players in the F/A-18E/F and EA-18G program and on many press reports of the day to tell the story of how these aircraft were designed, developed, and deployed. Moreover, the book provides insights into the problems faced by these key individuals as well as the management methods they used to produce aircraft that have consistently been delivered at or ahead of schedule, under cost, and under weight.

F/A-18 Super Hornet John Hamilton, 2012-01-01 This title explores the development and use of the US Navy's multi-role F/A-18 Super Hornet strike fighter. Readers will follow the history of its origins from the F/A-18 Hornet. Chapters also detail the aircraft's military and performance specifications as well as its features and advantages in the field, such as its flight range, its digital control-by-wire flight control system, its engine, its stealth technology, its aerial refueling system, and its many powerful guns, missiles, and bombs. Aligned to Common Core Standards and correlated to state standards. A&D Xtreme is an imprint of Abdo Publishing, a division of ABD0.

The Introduction of F/A-18 E/F (Super Hornet) Aircraft to the East Coast of the United States ,2003

F/a-18 Hornet-Super Hornet Illustrated ,2017-02-17 A fully illustrated history of the McDonnell Douglas/Boeing F/A-18 Hornet series of attack aircraft, including the EA-18G Growler and export Hornets. Updated in print format to include many more photos and illustrations. This history contains over 200 photos and several of the paintings of the author.

Hornet Orr Kelly,2014-06-24 The fascinating true story of the controversial development and deployment of the supersonic fighter jet that changed aerial warfare forever The McDonnell Douglas F/A-18 Hornet was born in 1978, a state-of-the-art supersonic fighter and attack aircraft with a top speed of Mach 1.8, more than one thousand miles per hour. It was versatile, fast, and reliable, and no war machine in the air could match it. The marines adopted it first, followed by the navy, impressed by its incomparable ability to engage in close aerial combat while at the same time efficiently delivering explosive payloads to designated enemy targets. It became the aircraft of choice for the US Navy's famous Blue Angels flight demonstration squadron in 1986 and served ably in combat from its first mission—America's launched air strike against Libya that same year—through 1991's Operation Desert Storm and well beyond. Yet the Hornet has always been shrouded in controversy, and while still in its planning stages, it sparked an unprecedented political battle that nearly doomed the miraculous machine before it could take flight. Orr Kelly, the acclaimed military author who has notably chronicled the remarkable histories of the US Navy SEALs and other branches of America's Special Forces, tells the fascinating true story of the F/A-18 Hornet—how it came to be, how it almost wasn't, and how it forever altered the way our nation's wars are fought.

F/A-18E/F Super Hornet and EA-18G Growler Ken Neubeck,2020 The Boeing F/A-18 E/F Super Hornet is an evolutionary redesign of the McDonnell Douglas F/A-18 A/B Hornet. The Legacy F/A-18 Hornet first flew in 1980 and met the requirement for a multirole fighter to complement the larger and more expensive Grumman F-14 Tomcat, serving in fleet defense interceptor and air superiority roles. The Hornet proved to be effective, but it was limited in combat radius due to fuel capacity. This would be corrected with the newer and larger F/A-18 Super Hornet design, which is now the primary fighter/attack aircraft used in the US Navy carrier fleet and has replaced both the legacy Hornet and the F-14 Tomcat. Additionally, the Super Hornet airframe design was used for the design of the EA-18G Growler, which took over the electronic countermeasures (ECM) role of the EA-6B Prowler.

The Air Forces Book of the F/A-18 Hornet Tim Senior,2003 The F/A-18 Hornet has been in service over 20 years and has developed into an effective multi-role combat aircraft. With its array of weapon options the Hornet is capable of engaging targets on land, sea, and in the air and its ability to swing-role from one target type to another is impressive. The aircraft is in service with a number of air arms worldwide in both carrier-based and land-based variants.

Boeing Super Hornet & Growler: F/A-18e/F - EA-18g Hugh Shrakin,2014-12-06 F/A-18E/F Super Hornet & EA-18G Growler The Boeing F/A-18E/F Super Hornet

program was born out of a requirement to find a replacement for the cancelled A-12 Avenger II strike aircraft and, through various twists and turns, it became an Grumman F-14 Tomcat replacement and would supplement the smaller, less capable, F/A-18C/D in USN service. Conducting its first flight in prototype form in 1995, Production deliveries commenced in 1998 and the aircraft entered full operational service in the first years of the 21st Century. As well as being the USN's premier strike fighter, the F/A-18F is also operated by the Royal Australian Air Force, deliveries commencing in 2010. The EA-18G Growler was developed as a replacement for the EA-6B Prowler in the electronic warfare role. The prototype was flown in 2006 and the Growler achieved initial operational capability in 2009. The Super Hornet has a number of pluses and minuses, but the bottom line is that the aircraft can do the job it was designed for and has potential for future growth as evidenced by the emergence of the Advanced Super Hornet, a growth development of the Block II Super Hornet, primarily aimed at increasing range and reducing the aircraft's radar signature. In the Boeing F/A-18E/F Super Hornet the USN got the aircraft that they asked for; no 'silver bullet', but an affordable evolution from the F/A-18C/D Hornet. This volume recounts the Super Hornet and Growler programs genesis and development and describes the aircraft and systems along with entry into service details, with an overview of customer usage and potential future growth in the shape of the Advanced Super Hornet which emerged in 2013. All facts and figures used in the preparation of this volume come from official sources such as manufacturers, operators, government agencies and test organisations. The volume is copiously supported by black and white photographs and technical drawings

The Introduction of F/A-18 E/F (Super Hornet) Aircraft to the East Coast of the United States ,2003

Boeing (McDonnell Douglas) F/A-18 E/F Super Hornets Vol. II Salvador Mafé Huertas,2022-01-31 The FACA program (Future Fighter and Attack Aircraft) was once the largest investment in armaments made in Spain. When choosing the F-18 of McDonnell Douglas (today Boeing), the Air Force has had since 1986 - for the first time in its history - one of the most advanced fighter planes ever designed, with very wide possibilities for adapting new systems throughout its operational life, as evidenced by the Retrofit made in the early 1990s and the current MLU. The FACA program (which ultimately remained in 72 aircraft), followed by the CX program (for 24 aircraft), was the most important challenge faced by the Spanish Air Force since its creation. The professionalism demonstrated by the commission in charge of flight and technical evaluations won the admiration of the countries involved in the program. The F-18 Hornet has proven to be the ideal aircraft for air forces in countries with large territorial areas and wide coastlines or extreme weather conditions.

McDonnell Douglas F/A-18 Hornet and Super Hornet Steve Davies,2017-03-01 The US-designed and built McDonnell Douglas F/A-18 Hornet is one of the most important Fourth Generation fighters in the world. Its twin-engine, twin-tails (canted outwards), and leading edge root extensions make it one of the most recognizable fighters in operation. The latest version is the enlarged Super Hornet. It was controversial in being chosen as the replacement for the much loved F-14 Tomcat, but the truth is that it is a potent and fearsome fighter that boasts one of the most capable radars in service and a weapons loadout that takes full advantage of it. The Super Hornet currently performs

the bulk of the Western world's airstrikes on the nefarious terrorist group 'ISIS' in Iraq and Syria. Developed initially by Northrop as the P-530 Cobra in response to the US Air Force's Light Weight Fighter competition (winner: the General Dynamics F-16), the Hornet had a troubled start in life. Designated the YF-17 for the LWF fly-off in 1974, it failed to impress the Air Force. However, contractor McDonnell Douglas stepped in confident that it could be improved sufficiently to make it a contender for the US Navy's new fighter competition. McAir, as was often the case, were right. Re-designed and re-designated the F/A-18 (fighter/attack), it won the competition and entered service with the US Navy as a carrier-borne, multi-role fighter, marking the beginning of the Hornet's journey from Air Force 'reject' to 'king' of the US Navy's Fleet Defenders

The Boeing F/A-18E and F/A-18F Super Hornet are twin-engine, carrier-capable variants based on the McDonnell Douglas F/A-18 Hornet. The F/A-18E single-seat variants are larger and more advanced derivatives of the F/A-18C and D Hornet.
