**Building the 21st Century Home** David Rudlin, Nicholas Falk, 1999 The book reviews the way that planning policies, architectural trends and economic forces have undermined the viability of urban areas in Britain since the Industrial Revolution. Now that much post-war planning philosophy is being discredited we are left with few urban models other than garden city inspired suburbia. Are these appropriate in the 21st century given environmental concerns, demographic change, social and economic pressures? The authors suggest that these trends point to a very different urban future. If the 19th century home was the terrace and the 20th century was the suburban semi, what will be the 21st century home? In the 21st century it is likely that a change will take place in the way that we build our towns and cities, as dramatic as that brought about by the garden city pioneers a hundred years ago. Change should not, however, be brought about by regulation or by forcing people against their will to return to towns and cities. Instead, this book argues that we must reform our towns and cities so that they become attractive, humane places where people will choose to live. The Sustainable Urban Neighbourhood is a model for such reform and the book describes what this would look like and how it might be brought about. David Rudlin BA, MTP and Dr Nicholas Falk MBA are directors of URBED (The Urban and Economic Development Group), a not-for-profit consultancy which has been working since 1976 to devise practical solutions to the problems of urban areas. They were responsible for the '21st Century Homes: Building to Last' report for the Joseph Rowntree Foundation which first developed the notion of the Sustainable Urban Neighbourhood. David Rudlin is a town planner and urban designer and has been closely involved in the redevelopment of the 'Hulme Guide to Development'. He was also a member of an advisory panel responsible for drawing up the 'Manchester Guide to Development'. Nicholas Falk is an economist and strategic planner who formerly worked for the Ford Motor Company before establishing URBED in 1976. He has written and lectured widely on urban issues and was the principle author of 'Vital and Viable Town Centres: Meeting the Challenge' for the Department of the Environment. · Explore how to combine social, environmental and economic thinking with urban design · Benefit from Rudlin and Falk's expertise in urban planning and development

*Sustainable Urban Neighbourhood* David Rudlin, Nicholas Falk, 2010-05-14 This successful title, previously known as 'Building the 21st Century Home' and now in its second edition, explores and explains the trends and issues that underlie the renaissance of UK towns and cities and describes the sustainable urban neighbourhood as a model for rebuilding urban areas. The book reviews the way that planning policies, architectural trends and economic forces have undermined the viability of urban areas in Britain since the Industrial Revolution. Now that much post-war planning philosophy is being discredited we are left with few urban models other than garden city inspired suburbia. **Sustainable Urban Planning** Helmut Bott, Gregor C. Grassl, Stephan Anders, 2019 Life in the city is popular and creating liveable urban space is undoubtedly a priority for planners. Yet what makes a city worth living in? How do we define sustainable neighbourhoods that will function properly and continue to attract people in the future? What does Smart City or resilience really mean? The completely revised, new edition of this publication provides the answers. It addresses the fundamental challenges of urban planning today and offers planners essential knowledge, implementation strategies and ways toward holistic concept development. Examples of international neighbourhood developments clearly show how aspects of sustainable urban planning can be implemented in practice.

**Shaping Neighbourhoods** Hugh Barton, Marcus Grant, Richard Guise, 2021-06-29 Shaping Neighbourhoods is unique in combining all aspects of the spatial planning of neighbourhoods and towns whilst emphasising positive outcomes for people's health and global sustainability. This new edition retains the combination of radicalism, evidence-based advice and pragmatism that made earlier editions so popular. This updated edition strengthens guidance in relation to climate change and biodiversity, tackling crises of population health that are pushing up health-care budgets, but have elements of their origins in poor place spatial planning – such as isolation, lack of everyday physical activity, and respiratory problems. It is underpinned by new research into how people use their localities, and the best way to achieve inclusive, healthy, low-carbon settlements. The guide can assist with:

- Understanding the principles for planning healthy and sustainable neighbourhoods and towns
- Planning collaborative and inclusive processes for multi-sectoral working
- Developing know-how and skills in matching local need with urban form
- Discovering new ways to integrate development with natural systems
- Designing places with character and recognising good urban form

Whether you are a student faced with a local planning project; a public health professional, planner, urban designer or developer involved in new development or regeneration; a council concerned with promoting healthy and sustainable environments; or a community group wanting to improve your neighbourhood – you will find help here.

**Urban Development and Civil Society** Michael Carley, Harry Smith, 2013-11-05 The world's population is rapidly urbanizing but the affluence and development often associated with cities are far from equitably or sustainably distributed. Where it was once taken for granted that responsibility for urban development lay with the state, increasingly the emphasis has shifted to market-driven and public-private sector initiatives, which can marginalize the intended beneficiaries – the urban poor – from decision making and implementation. This text outlines the essential conditions for effective urban planning and management by placing bottom-up community initiatives at the heart of the push for equitable and sustainable development in cities. Crucially, the state must engage with both the market and civil society in pursuit of sustainable cities. Presenting a wide-ranging selection of case studies in rapidly urbanizing and transitional countries, from the poorest parts of Africa and Asia to the relatively developed United Kingdom, the authors describe and analyze innovations in how globally disadvantaged urban communities can be engaged in improving their living environments.

*Sustainable Neighbourhoods in Australia* Raymond Charles Rauscher, Salim Momtaz, 2015-04-21 This book examines the planning and implementation of policies to create sustainable neighborhoods, using as a case study the City of Sydney. The authors ask whether many past planning and development practices were appropriate to the ways that communities then functioned, and what lessons we have learned. The aim is to illustrate the many variations within a city and from neighborhood to neighborhood regarding renewal (rehabilitation), redevelopment (replacement) and new development. Case study examples of nine City of Sydney neighborhoods note

the different histories of planning and development in each. Features of the studies include literature searches, field work (with photography), and analysis. The authors propose a set of sustainability principles which incorporate elements of the twenty seven principles of the 1992 Rio Declaration on Environment and Development Part One explores sustainable urban planning, and the importance of planning tools that enable best planning outcomes for communities and investors. Common factors in the nine case study neighborhoods are renewal, redevelopment and development pressures affecting Sydney from the 1970s to 2014. Also discussed are the differing circumstances of planning faced by authorities, developers and communities in each of the study areas. Part Two of the book is focused on the case study areas in City of Sydney East area: Woolloomooloo and Kings Cross. Part Three covers case study areas in Sydney's Inner South area: Chippendale, Redfern and Waterloo District. Part Four surveys the Inner West suburb of Erskineville. Part Five looks at the City West area, including the Haymarket District and the Pyrmont and Ultimo District. Part Six concentrates on the North West area suburb of Glebe. Part Seven of the book looks at the growth area of South Sydney District, which includes the suburbs of Beaconsfield, Zetland and the new localities of Victoria Park and Green Square. The authors recount lessons learned and outline directions of planning for sustainable neighborhoods. Finally, the authors challenge readers to apply the lessons of these case studies to further advances in sustainable urban planning.

**Sustainable Communities** Hugh Barton, 2013-12-02 'This book re-addresses the concepts of neighbourhood and community in a refreshing and challenging way. It will be of immense benefit, not only to town planners but also to all those professional and voluntary groups and politicians who seek to create the new communities of tomorrow' From the Foreword by Jed Griffiths, Past President of the Royal Town Planning Institute. There is widespread support for the principle of creating more sustainable communities, but much hazy, wishful-thinking about what this might mean in practice. In reality, we witness more the death of local neighbourhoods than their creation or rejuvenation, reflecting an increasingly mobile, privatized and commodified society. Sustainable Communities examines the practicalities of re-inventing neighbourhoods. It is neither an idealistic, utopian tract nor a designer's manual, but is, rather, a serious attempt to address the real issues. This collection of expert contributions: \* examines the nature of local community and methods of building social capital \* presents the findings of a world-wide survey of eco-neighbourhoods and eco-villages with case studies from the United Kingdom, Europe, America and Australia \* develops a fresh perspective on the planning and design of neighbourhoods in urban areas, based on the eco-system approach \* explores practical programmes for local resource management and the implications for community-based decision-making \* provides a detailed appendix listing current eco-village and eco-neighbourhood schemes by country Written by an interdisciplinary team of social and environmental scientists, town planners and urban designers, this is a thought-provoking and important contribution to both the theory and practice of the development of sustainable communities.

**Urban Social Sustainability** M. Reza Shirazi, Ramin Keivani, 2019-01-22 This ground breaking volume raises radical critiques and proposes innovative solutions for social sustainability in the built environment. Urban Social Sustainability provides an in-depth insight into the discourse and argues that every urban intervention has a social sustainability dimension that needs to be taken into consideration, and incorporated into a comprehensive and cohesive 'urban agenda' that is built on three principles of recognition, integration, and monitoring. This should be achieved through a dialogical and reflexive process of decision-making. To achieve sustainable communities, social sustainability should form the basis of a constructive dialogue and be interlinked with other areas of sustainable development. This book underlines the urgency of approaching social sustainability as an urban agenda and goes on to

make suggestions about its formulation. Urban Social Sustainability consists of original contributions from academics and experts within the field and explores the significance of social sustainability from different perspectives. Areas covered include urban policy, transportation and mobility, urban space and architectural form, housing, urban heritage, neighbourhood development, and urban governance. Drawing on case studies from a number of countries and world regions the book presents a multifaceted and interdisciplinary understanding from social sustainability in urban settings, and provides practitioners and policy makers with innovative recommendations to achieve more socially sustainable urban environment.

Neighbourhoods in Transition Emmanuel Rey, Martine Laprise, Sophie Lufkin, 2021-09-25 This open access book is focused on the intersection between urban brownfields and the sustainability transitions of metropolitan areas, cities and neighbourhoods. It provides both a theoretical and practical approach to the topic, offering a thorough introduction to urban brownfields and regeneration projects as well as an operational monitoring tool. Neighbourhoods in Transition begins with an overview of historic urban development and strategic areas in the hearts of towns to be developed. It then defines several key issues related to the topic, including urban brownfields, regeneration projects, and sustainability issues related to neighbourhood development. The second part of this book is focused on support tools, explaining the challenges faced, the steps involved in a regeneration process, and offering an operational monitoring tool. It applies the unique tool to case studies in three selected neighbourhoods and the outcomes of one case study are also presented and discussed, highlighting its benefits. The audience for this book will be both professional and academic. It will support researchers as an up-to-date reference book on urban brownfield regeneration projects, and also the work of architects, urban designers, urban planners and engineers involved in sustainability transitions of the built environment.

*Sustainable Urban Planning* Joy Sen, 2013-01-01 Developing an approach for sustainable planning framework in the Indian context is extremely complex due to the diversity in the urban and metropolitan regions in the country. Sustainable Urban Planning attempts to clarify the planning process and sets a broad framework of urban planning in the country. The book focuses on the planning reality of fundamental dimensions of sustainability and explains a work framework of the dynamics of sustainable planning in India. The present book clarifies the planning process to students, who are trying to work in the Indian context. It presents in three sections a set of interwoven discussions. Section one operates on the corpus of planning reality to disentangle the sutras of fundamental dimensions of sustainability and the interrelationship between these sutras to re-explain a working framework of the dynamics of sustainable planning in India. Section two expands on each of the dimensions, explaining their divergent parameters and their indispensable roles in the making of such a framework. Section three synthesizes all of them to form the framework itself.

**Promise and Betrayal** John I. Gilderbloom, R. L. Mullins Jr., 2012-02-01 Traditionally, institutions of higher education have been viewed as the gateway to a better future, despite the fact that so many of the neighborhoods surrounding them have been filled with hopelessness and despair. In Promise and Betrayal, the authors want nothing less than to start a revolution in higher education, calling

on partnerships between town and gown to create sustainable urban neighborhoods. John I. Gilderbloom and R. L. Mullins Jr. detail how higher education institutions can play an important role in helping to revitalize our poor neighborhoods by forming partnerships with public, private, and nonprofit groups. They advocate leaving the ivory tower and supplying the community with expert knowledge as well as creative and technical resources.

*Sustainable Communities and Urban Housing* Montserrat Pareja-Eastaway, Nessa Winston, 2016-12-08 Since the start of the twenty-first century, urban communities have faced increasing challenges in housing affordability, with environmental issues causing additional concern. It is clear that changes to urban housing are needed to enhance the resilience of cities and improve the economic, social and physical well-being of residents. This book provides a comparative cross-national perspective on urban housing and sustainability in Europe, exploring the key barriers and drivers associated with sustainable urban development and community regeneration. Country-specific chapters allow for easy comparison, with each summarizing how sustainable housing operates in the country in question, before going on to discuss the key barriers and drivers at play. This book brings a sustainability perspective to the comparative housing literature which frequently fails to integrate the social, economic and environmental pillars of sustainability. The book outlines many of the changes that professionals and residents will need to make to their practices and cultures in order to enhance housing resilience. Students, researchers and professionals with an interest in sustainable housing creation and regeneration will find this book an invaluable reference.

**Brooklyn's Bushwick - Urban Renewal in New York, USA** Raymond Charles Rauscher, Salim Momtaz, 2014-05-05 This book offers an extended case study of the urban community of Bushwick, located in the Brooklyn borough of New York City. The authors begin with a broad review of the history of Bushwick and Brooklyn, from before the earliest European settlements of the 1600s, through the 18th and 19th centuries and up to the 1960s. Chapter Two begins by tracing the steep decline of the community, which culminated in catastrophic fires and looting in the wake of New York's electrical blackout of 1977 and goes on to describe the beginnings of urban planning and renewal efforts which launched the recovery of Bushwick in the 1980s to early 2000s. Chapter Three steps back from the immediacy of the community to discuss urban change from a theoretical perspective. The authors outline advances in 'sustainable urban planning' and describe how these apply to Bushwick and the wider Brooklyn community. Chapter Four offers a detailed examination of the intent and function of New York's community board planning system, known as the Charter 197-a program. In Chapter Five the authors examine the 197-a planning process and its application in the areas of Bushwick, Williamsburg and Greenpoint in Northeast Brooklyn; Brooklyn Downtown and in Southeast Brooklyn including Coney Island. The following chapter examines a number of innovative Bushwick high schools that offer practical experience in urban planning. Drawing the urban planning experiences together, the book concludes with a look at future directions in city renewal. Emphasis here is placed on 'sustainable urban planning' and the lessons to be learned from the experience of Bushwick and Brooklyn. The specifics of urban planning and renewal are illustrated with tables and figures. The details of planning are informed by an overarching sense of history, beginning with the dedication of the book to the memory of six Universalist writers associated with New York: Henry Thoreau, Helena Blavatsky, Henry George, Henry Miller, Arthur Miller and Walt Whitman. A rich trove of historical materials, ranging from family sketches to school rosters to rarely seen photographs, helps to keep the survey and analysis of urban planning grounded in the lives of Bushwick's residents, past, present and future.

**A Sustainable Urban Neighbourhood** Peng Peng, 1999

*Pathways to Urban Sustainability* National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Pathways to Urban Sustainability: Challenges and Opportunities, 2016-10-11 Cities have experienced an unprecedented rate of growth in the last decade. More than half the world's population lives in urban areas, with the U.S. percentage at 80 percent. Cities have captured more than 80 percent of the globe's economic activity and offered social mobility and economic prosperity to millions by clustering creative, innovative, and educated individuals and organizations. Clustering populations, however, can compound both positive and negative conditions, with many modern urban areas experiencing growing inequality, debility, and environmental degradation. The spread and continued growth of urban areas presents a number of concerns for a sustainable future, particularly if cities cannot adequately address the rise of poverty, hunger, resource consumption, and biodiversity loss in their borders. Intended as a comparative illustration of the types of urban sustainability pathways and subsequent lessons learned existing in urban areas, this study examines specific examples that cut across geographies and scales and that feature a range of urban sustainability challenges and opportunities for collaborative learning across metropolitan regions. It focuses on nine cities across the United States and Canada (Los Angeles, CA, New York City, NY, Philadelphia, PA, Pittsburgh, PA, Grand Rapids, MI, Flint, MI, Cedar Rapids, IA, Chattanooga, TN, and Vancouver, Canada), chosen to represent a variety of metropolitan regions, with consideration given to city size, proximity to coastal and other waterways, susceptibility to hazards, primary industry, and several other factors.

**Sustainable Urbanism** Douglas Farr, 2012-01-09 Written by the chair of the LEED-Neighborhood Development (LEED-ND) initiative, *Sustainable Urbanism: Urban Design with Nature* is both an urgent call to action and a comprehensive introduction to sustainable urbanism--the emerging and growing design reform movement that combines the creation and enhancement of walkable and diverse places with the need to build high-performance infrastructure and buildings. Providing a historic perspective on the standards and regulations that got us to where we are today in terms of urban lifestyle and attempts at reform, Douglas Farr makes a powerful case for sustainable urbanism, showing where we went wrong, and where we need to go. He then explains how to implement sustainable urbanism through leadership and communication in cities, communities, and neighborhoods. Essays written by Farr and others delve into such issues as: Increasing sustainability through density. Integrating transportation and land use. Creating sustainable neighborhoods, including housing, car-free areas, locally-owned stores, walkable neighborhoods, and universal accessibility. The health and environmental benefits of linking humans to nature, including walk-to open spaces, neighborhood stormwater systems and waste treatment, and food production. High performance buildings and district energy systems. Enriching the argument are in-depth case studies in sustainable urbanism, from BedZED in London, England and Newington in Sydney, Australia, to New Railroad Square in Santa Rosa, California and Dongtan, Shanghai, China. An epilogue looks to the future of sustainable urbanism over the next 200 years. At once solidly researched and passionately argued, *Sustainable Urbanism* is the ideal guidebook for urban designers, planners, and architects who are eager to make a positive impact on our--and our descendants'--buildings, cities, and lives.

*New York Neighborhoods - Addressing Sustainable City Principles* Raymond Charles Rauscher, 2018-08-18 This book examines the neighborhoods of New York City to determine to what extent planning in New York addresses Sustainable City Principles (SCPs). Part I looks at the background to planning urban areas in the face of global urban changes. These changes (i.e. population movements and densification of cities) are placing pressures on cities worldwide. Chapter 1 provides a background to these global pressures (i.e. population growth) and their implications. Chapter 2 looks closer at New York planning and introduces Sustainable City Principles

(SCPs). Part II introduces nine selected neighborhoods within Manhattan and examines to what extent planning of these neighborhoods addresses the SCPs. For each chapter a neighborhood background is provided and results of the author's field survey are reviewed. Part III examines the selected neighborhoods within Brooklyn to determine to what extent planning of those neighborhoods addresses the SCPs. Part IV examines the last three neighborhoods (in Queens) and addresses the SCPs. Part V examines conclusions reached from examining the nine neighborhoods. These conclusions are used to determine the extent that the City Council (and the community) are addressing SCPs in planning neighborhoods. Finally, lessons learned from these conclusions are assessed for their relevance to planning neighborhoods anywhere in the world.
