The Self at Work D. Lance Ferris, Russell E. Johnson, Constantine Sedikides, 2017-12-14 The Self at Work brings researchers in industrial and organizational psychology and organizational behavior together with researchers in social and personality psychology to explore how the self impacts the workplace. Covering topics such as self-efficacy, self-esteem, self-control, power, and identification, each chapter examines how research on the self informs and furthers understanding of organizational topics such as employee engagement, feedback-seeking, and leadership. With their combined expertise, the chapter authors consider how research on the self has influenced management research and practice (and vice-versa), limitations of applying social psychology research in the organizational realm, and future directions for organizational research on the self. This book is a valuable resource for researchers, graduate students, and professionals who are interested in how research on the self can inform industrial/organizational psychology.

Strangeness Nuclear Physics Il-Tong Cheon, Seung-Woo Hong, Toshio Motoba, 2000 The unique role of strangeness in nuclear physics has recently attracted much attention, from both the theoretical and experimental viewpoints. This is due not only to the broad spectrum of possible hadron many-body systems with strangeness, but also to the fact that strangeness gives us an opportunity to study fundamental baryon-baryon interactions in a new perspective. Our knowledge of this subject has widened as the scope of hypernuclear experiments has expanded from strangeness exchange and the associated production reactions to hypernuclear weak decays, Λ decays, cascade hypernuclei, double- Λ events, electroproduction of strangeness, etc. This trend will be accelerated by the full operation of new laboratories such as TJLab, COSY, DAÈNE, JHF, MAMI, and others. Various aspects of those important and exciting topics are discussed in this book in order to get a perspective of this fast developing area of nuclear physics.

Lucero del Alba Miguel Ángel Ruíz, 2023-09-18 Tres décadas han transcurrido desde que el pastor del Alba pisó las inescrutables tierras de Lucero del Alba. El miedo, el rencor y la obsesión se han encargado de custodiar las almas de los ahora habitantes de La Señora Latente, y desde aquel entonces ninguno de ellos se paró a meditar en el posible regreso de Lord Bethuz, salvo por los pobres desgraciados que alguna vez tuvieron la osadía de humillarlo. Pesadillas, visiones, apariciones. El momento de la venganza ha sido hilvanado con paciencia y muerte. Sin nada más por lo que luchar. Sin nada más por lo que esperar. Sin nada más por lo que creer. A lo lejos se escuchan las laudes que, enarbolados como el sol, guían al Lucero hacia su advenimiento final... "El territorio albaño ahora es un enorme lienzo, el cual, poco a poco, se revestirá de un tono carmesí..."

Shonen Knife's Happy Hour Brooke McCorkle Okazaki, 2021-01-14 Shonen Knife-an all-female punk trio from Osaka, Japan-cultivated a global fan base that has included the likes of Nirvana's Kurt Cobain and Sonic Youth's Thurston Moore. Their 1998 album Happy Hour, filled with tunes about delicacies ranging from sushi to banana chips, encapsulates the band's charming fusion of cuteness with punk rock cool. Tracing histories of food and jasei rock in Japan, McCorkle Okazaki outlines the ways Shonen Knife has, over the last forty years, consistently used seemingly straightforward songs about food to comment on gender stereotypes in popular culture.

Hemoglobin Disorders Ronald L. Nagel, 2008-02-01 Hemoglobin and Hemoglobinologists This volume, Hemoglobin Disorders: Molecular Methods and Protocols, will be introduced with a review of the great milestones in the field, and the scientists responsible for those achievements. The history of hemoglobin can be divided into three periods: the Classical period, the Modern period, and the Post-Modern period. I am inclined to include as the four major members of the classical period Francis Roughton, Quentin Gibson, Jeffries Wyman, and Linus Pauling, not only because of their achievements, but also because of the superb scientists they trained and/or influenced. Francis John Worsely Roughton (1899–1972) (Fig. 1), in his laboratory at Trinity College in Cambridge, England, made the first measurements of the rapid reaction of oxygen with hemoglobin at the millisecond scale, at first by flow-mixing methods and later by flash photolysis. He not only opened an era of molecular research of hemoglobin, but also invented the methodology for fast reactions through the use of laser technology, which was later improved by others so that even faster reactions could be detected. Another contribution of Roughton was the education of Quentin H. Gibson (Fig. 2), his favorite student, who, in his laboratory in Sheffield, continued to expand the horizon of ligand binding to hemoglobin, defining the oxygen binding constants for each of the hemes of hemoglobin. Though this did not, as expected, solve the underlying mechanism of ligand cooperativity as discussed below, it was nonetheless an important milestone.
