Swine Flu John,2014-10-24 Words Swine Flu brings up a lot of extra fear and worry. Swine Flu is caused by Swine Influenza Virus (SIV). Origin of swine influenza virus is elusive. What You'll Get Inside: - Chapter 1: Swine Flu classification - Chapter 2: Swine Flu virus history - Chapter 3: Swine Flu virus today - Chapter 4: Swine Flu vaccine - Chapter 5: Swine Flu influenza (H1N1) symptoms - Chapter 6: Swine Flu treatment - Chapter 7: Swine Flu related information Swine Flu: Symptoms, Vaccine, Virus Treatment looks into Swine Flu and explores classification, history, symptoms, vaccine and treatment. This book provides the reader significant and substantial basic knowledge about Swine Flu. Take A Sneak Peak Inside: (Page 6) Before Spanish flu outbreak, Swine Flu was not known as a disease of pigs. Recent phylogenetic studies of recent virus strains in human, birds and swine suggest that human flu virus of 1918 came about after a reassortment event in some mammal. However, the exact strain of virus of 1918 still remains elusive. Next significant events in the history of Swine Flu were - a) isolation of Swine Flu virus from a pig in Iowa in 1931 and b) first isolation of human flu virus at Mill Hill in London in 1933. Clinical studies of these viruses revealed that these viruses - one in swine and the other in humans - had evolved and they were already genetically apart. Asian flu pandemic broke out in 1957. This time, the flu was caused by another strain of virus, namely, H2N2. Following this pandemic, which killed 1 - 1.5 million people worldwide, H1N1 strain was completely replaced by H2N2. Since Spanish flu, H1N1 virus has been circulating in humans. Now, they have disappeared: in their place, H2N2 viruses have come. The virus is reassortment of human flu H1N1 and an avian flu virus strain H2N2. Buy Now & Give Me Opportunity To Develop My Skills. Swine Influenza Jürgen A. Richt,Richard J. Webby,2014-07-08 From the first detailed clinical description of the disease in the Midwestern United States in 1918, to the isolation of the causative agent, the first of any influenza virus, in 1930 to its role in the genesis of the 2009 human pandemic, swine have played a central role in the ecology of influenza. Although not considered the major natural reservoir for influenza A viruses, swine are host to a limited but dynamic assortment of viruses. A number of subtypes of influenza A viruses of human and avian origin, including H1, H2, H3, H4, H5, H7, and H9, have been isolated from global swine populations. Most of these isolations have, however, been limited in number and it is only H1 and H3 influenza viruses that are known to have formed stable lineages in swine. In this respect, swine influenza viruses (SIV) are similar to their counterparts in humans where H1 and H3 viruses have also been maintained. The nature of these H1 and H3 viruses differ between the two host populations, however, and, as discussed throughout this book, are even different in swine populations in different geographic regions of the world due to multiple introductions of avian and human influenza viruses.

Swine Flu Julia C. Marie,Thomas B. Johnson (Editor),2013 Swine-origin influenza A (H1N1), better known as swine flu, was declared by the World Health Organization as a global pandemic in June 2009. The highly contagious influenza A H1N1 virus can cause either a mild influenza-like infection that is similar to seasonal influenza, or less frequently, a rapidly progressing community-acquired pneumonic illness that can cause acute respiratory failure and even death. This book addresses the signs/symptoms, epidemiology, preventive methods and treatment options for swine flu.

The Domestic and International Impacts of the 2009-H1N1 Influenza A Pandemic Institute of Medicine,Board on Global Health,Forum on Microbial Threats,2010-07-04 In March and early April 2009, a new, swine-origin 2009-H1N1 influenza A virus emerged in Mexico and the United States. During the first few weeks of surveillance, the virus spread by human-to-human transmission worldwide to over 30 countries. On June 11, 2009, the World Health Organization (WHO) raised the worldwide pandemic alert level to Phase 6 in response to the ongoing global spread of the novel influenza A (H1N1) virus. By October 30, 2009, the H1N1 influenza A had spread to 191 countries and resulted in 5,700 fatalities. A national emergency was declared in the United States and the swine flu joined SARS and the avian flu as pandemics of the 21st century. Vaccination is currently available, but in limited supply, and with a 60 percent effectiveness rate against the virus. The story of how this new influenza virus spread out of Mexico to other parts of North America and then on to Europe, the Far East, and now Australia and the Pacific Rim countries has its origins in the global interconnectedness of travel, trade, and tourism. Given the rapid spread of the virus, the international scientific, public health, security, and policy communities had to mobilize quickly to characterize this unique virus and address its potential effects. The World Health Organization and Centers for Disease Control have played critical roles in the surveillance, detection and responses to the H1N1

virus. The Domestic and International Impacts of the 2009-H1N1 Influenza A Pandemic: Global Challenges, Global Solutions aimed to examine the evolutionary origins of the H1N1 virus and evaluate its potential public health and socioeconomic consequences, while monitoring and mitigating the impact of a fast-moving pandemic. The rapporteurs for this workshop reported on the need for increased and geographically robust global influenza vaccine production capacities; enhanced and sustained interpandemic demand for seasonal influenza vaccines; clear triggers for pandemic alert levels; and accelerated research collaboration on new vaccine manufacturing techniques. This book will be an essential guide for healthcare professionals, policymakers, drug manufacturers and investigators.

Swine Flu : Pandemic Strikes (The New H1N1 Threat) Sunaina Chaturvedi,2009-08-01 The first case of this novel H1N1 influenza was dismissed by us as being a one-off incident, and being far away from where we were. Yet somehow, in a very short span of time, and in the 'age of communication' the virus has traversed all across the world to grow into a pandemic. Such a tumultuous growth of an unknown disease has created fear among people; leading to irrational actions as a result of a lack of understanding. With this book, we have attempted to bring back sanity amidst the unfolding chaos which otherwise has the potential to spiral out of control. Our aim is to make the administration, the medical authorities, the media and the people at large to understand that there is no need to panic. We want to make all of them aware that the infection is preventable, treatable and even curable; in most cases the symptoms have usually been mild. They need to know that there are systems in place for the early detection, surveillance and treatment of the infection; all that now remains is their proper execution. The book is based on facts which can go a long way in clearing any myths and misnomers that are being harboured. It contains all that you need to know about H1N1 Influenza pertaining to: *Modes of transmission *Pathology of the disease *Prophylaxis *Prevention *Natural Remedies *Helpline numbers in India New Guidelines for Schools *Discourage Assemblies/any gathering of Students in School *Stress on Hygiene *Routine Cleaning in School *Quarantine in Student/Staff *Early treatment of High risk Students and staff
