**The USS Swordfish** George J. Billy, 2020-01-17 Among the more than 260 American submarines that patrolled the Pacific during World War II, the USS Swordfish in 1941 was the first to sink a Japanese armed merchant ship, marking the beginning of the submarine's colorful history. A series of seven commanders led Swordfish's 13 war patrols. Each skipper had a distinct leadership style. Some were successful in sinking enemy ships; others returned to port empty-handed. Yet all patrols risked dangerously close encounters with the enemy and the unforgiving nature of the open sea. Drawing on archival sources and interviews with veteran sailors, this first full-length history of the Swordfish provides detailed accounts of each patrol and covers the mysterious disappearance of the legendary submarine on its final mission.

Combat Codes Vic Flintham, Andrew Thomas, 2008-07-15 The authors of 'Combat Codes' have painstakingly researched the codes used by the RAF to replace unit markings during World War II in order to attempt to confuse the enemy.

**A Century of Naval Aviation, 1909–2009** David Wragg, 2009-08-19 Above the Waves is the history of the first century of British Naval aviation, with personal accounts adding color to the achievements both in technology, such as angled flight decks, mirror deck landing systems, helicopter assault and vertical take-off, and in operations, including the sinking of the Konigsberg and the daring attack on the Italian fleet at Taranto, convoy protection, operations with the United States Navy in the Pacific, then, post-war, Suez, and later the recovery of the Falklands from Argentine invasion. The Royal Navy was in the forefront of aviation from a very early stage. As the author reveals Officers such as the legendary Admiral of the Fleet Lord Fisher quickly recognized the strategic and tactical importance of air power. Winston Churchill, as First Lord of the Admiralty, volunteered the Navy for the air defense of the UK in WW1 but with the formation of the RAF in 1918 the Navy had a fierce fight to retain its own air arms and this is a struggle that has continued up to the present day. Not only are there many thrilling accounts of operations but this fascinating book also includes a chronology of major events. Above the Waves will appeal to those who have served, those who serve today and those who intend to serve in the future, and for their relatives and the many enthusiasts who sense the particular excitement of air operations at sea.

*A History of the Mediterranean Air War, 1940–1945* Christopher Shores,Giovanni Massimello,Russell Guest,Frank Olynyk,Winfried Bock,2016-08-05  
The third volume in the epic military aviation series focuses on the Allied invasion of North Africa during World War II. This work of WWII history takes us to November 1942 to explain the background of the first major Anglo-American venture: Operation Torch, the invasion of French North Africa. Describing the fratricidal combat that followed the initial landings in Morocco and Algeria, it then considers the unsuccessful efforts to reach northern Tunisia before the Germans and Italians could get there to forestall the possibility of an attack from the west on the rear of the Afrika Korps forces, then beginning their retreat from El Alamein. The six months of hard fighting that followed, as the Allies built up the strength of their joint air forces and gradually wrested control of the skies from the Axis, are recounted in detail. The continuing story of the Western Desert Air Force is told, as it advanced from the east to join hands with the units in the west. Also covered are the arrivals over the front of American pilots and crew, the P-38 Lightning, the Spitfire IX, and the B-17 Flying Fortress—and of the much-feared Focke-Wulf Fw 190. The aerial activities over Tunisia became one of the focal turning points of World War II, yet are frequently overlooked by historians. Here, the air-sea activities, the reconnaissance flights, and the growing day and night bomber offensives are examined in detail.
