Ultrafast Dynamics at the Nanoscale Stefan Haacke, Irene Burghardt, 2017-01-06 Ultrafast Dynamics at the Nanoscale provides a combined experimental and theoretical insight into the molecular-level investigation of light-induced quantum processes in biological systems and nanostructured (bio)assemblies. Topics include DNA photostability and repair, photoactive proteins, biological and artificial light-harvesting systems, plasmonic nanostructures, and organic photovoltaic materials, whose common denominator is the key importance of ultrafast quantum effects at the border between the molecular scale and the nanoscale. The functionality and control of these systems have been under intense investigation in recent years in view of developing a detailed understanding of ultrafast nanoscale energy and charge transfer, as well as fostering novel technologies based on sustainable energy resources. Both experiment and theory have made big strides toward meeting the challenge of these truly complex systems. This book, thus, introduces the reader to cutting-edge developments in ultrafast nonlinear optical spectroscopies and the quantum dynamical simulation of the observed dynamics, including direct simulations of two-dimensional optical experiments. Taken together, these techniques attempt to elucidate whether the quantum coherent nature of ultrafast events enhances the efficiency of the relevant processes and where the quantum-classical boundary sets in, in these high-dimensional biological and material systems. The chapters contain well-illustrated accounts of the authors' research work, including didactic introductory material, and address a multidisciplinary audience from chemistry, physics, biology, and materials sciences. The book is, therefore, a must-have for graduate- and postgraduate-level researchers who wish to learn about molecular nanoscience from a combined spectroscopic and theoretical viewpoint.

The Ubiquitous Siva John Nemec, 2011-07-22 John Nemec examines the beginnings of the non-dual tantric philosophy of the famed Pratyabhijñā or Recognition [of God] School of tenth-century Kashmir, the tradition most closely associated with Kashmiri Shaivism. In doing so it offers, for the very first time, a critical edition and annotated translation of a large portion of the first Pratyabhijñā text ever composed, the Sivadrsti of Somananda. In an extended introduction, Nemec argues that the author presents a unique form of non-dualism, a strict pantheism that declares all beings and entities found in the universe to be fully identical with the active and willful god Siva. This view stands in contrast to the philosophically more flexible panentheism of both his disciple and commentator, Utpaladeva, and the very few other Saiva tantric works that were extant in the author's day. Nemec also argues that the text was written for the author's fellow tantric initiates, not for a wider audience. This can be adduced from the structure of the work, the opponents the author addresses, and various other editorial strategies. Even the author's famous and vociferous arguments against the non-tantric Hindu grammarians may be shown to have been ultimately directed at an opposing Hindu tantric school that subscribed to many of the grammarians' philosophical views. Included in the volume is a critical edition and annotated translation of the first three (of seven) chapters of the text, along with the corresponding chapters of the commentary. These are the chapters in which Somananda formulates his arguments against opposing tantric authors and schools of thought. None of the materials made available in the present volume has ever been translated into English, apart from a brief rendering of the first chapter that was published without the commentary in 1957. None of the commentary has previously been translated into any language at all.
