Ordnance Maintenance ,1947

M7 Priest 105mm Howitzer Motor Carriage Steven J. Zaloga, 2013-07-20 Based upon the ubiquitous Grant/Sherman tank, the M7 Priest is the iconic Allied self-propelled howitzer. It was the most widely manufactured vehicle of its type in World War II and was utilized by the US, British, Canadian and Free French forces. Its combat debut was with Montgomery's Eighth Army at El Alamein and it fought subsequently in every major campaign through Sicily, Italy, Normandy and the final battles in Germany. In addition to covering all variants of the Priest, this book also looks at the major derivatives, including the British/Canadian Sexton and the US M12 155mm GMC.

Service of the Piece 105-MM Howitzer Motor Carriage M7 Priest Field Manual: FM 6-74 War Department, 2013-09 The 105-mm Howitzer Motor Carriage M7 was an American self-propelled artillery vehicle produced during World War II. It was called the Priest by the British Army, due to the pulpit-like machine gun ring. The first M7s produced were modified M3 Lee medium tanks. The M7 went through a fairly rapid shift from being based on the M3, to having more in common with the M4 Sherman. The first major example was an adoption of the M4's three piece housing, single piece casting and suspension. In British service, some M7s carried a radio set, which took the place of twenty-four rounds of ammunition. In U.S. service, the M7 was a resounding success. During the Battle

of the Bulge, each U.S. armored division had three battalions of M7s, giving them unmatched mobile artillery support. A total of 3,490 M7s were built and they proved to be reliable, continuing to see service in the U.S. and allied armies well past World War II. Created in 1944, this field manual reveals a great deal about the Priest's design and capabilities. The manual prescribes the duties to be performed in the service of the M7, by firing battery personnel. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

**M40 Gun Motor Carriage and M43 Howitzer Motor
Carriage in WWII and Korea** David Doyle,2017-10-18
The M40 Gun Motor Carriage and M43 Howitzer Motor Carriage are featured in over 200 photographs, providing a detailed study of the conception, development, testing, and combat use of these key vehicles. As the US entered WWII, the nation lacked heavy self-propelled artillery, instead relying heavily on towed artillery, much of it WWI-surplus. Only 100 examples of the nation's first heavy self-propelled gun, the M12, were built. Finding favor once deployed, attention was turned to developing an improved model. Initially designated the T83, and later as the M40, the new 155mm Gun Motor Carriage was first fielded in the closing months of WWII. Already scheduled for mass production, the M40, and its companion 8-inch howitzer-armed M43, continued to see extensive use during the Korean War, providing crucial support

to infantry and armor formations. Historic period images, as well as, meticulously photographed surviving examples, provide a detailed look at this important piece of US military hardware.

Stuart Tank Vol. 2 David Doyle,2019-10-28 The

Stuart light tanks were the first tanks taken into combat by US troops during WWII. Production of these vehicles can be broken into two categories: the early tanks powered by air-cooled radial engines, and late vehicles powered by twin V-8 engines. This volume explores the late vehicles with Cadillac water-cooled engines, the M5 and M5A1, as well as the M8 Howitzer Motor Carriage. Widely used by both the US Army and US Marines, as well as many Allied nations, these tanks, though lightly armed and armored, were mechanically sound and were widely used by US forces in Europe and the Pacific, as well as by Allied nations. Through dozens of archival photos, including previously unpublished images, as well as detailed photographs of some of the finest existing examples of these vehicles, this early-war combat vehicle is explored, and its history is explained. A companion volume explores the early M3, M3A1, and M3A3 versions.

M7 Priest David Doyle, 2018-12 The M7 Howitzer Motor Carriage, dubbed the Priest, was the most successful and widely used example of American self-propelled artillery during WWII. Examples continued to be used by the U.S. Army during the Korean war, and beyond, even serving Allied countries into the 1970s. Coined the Priest due to its pulpit-like structure for the gun commander, this armored fighting vehicle would see action in North Africa, Italy, and the D-Day landings in Normandy and all the way to Germany.

Basic Half-Track Vehicles M2, M3 Technical Manual War Department, 2011-09-01 Prior to the outbreak of WWII, the U.S. Army Ordnance Department began testing prototype half-track vehicles, including a White Motor Co. design that combined an M3 Scout Car with a White chassis. With armored bodies, an armored radiator shutter and bulletproof glass windscreen, the half-track offered crew protection and endurance under fire, while its speed - up to 45 mph - added a new dimension to infantry mobility. After testing and acceptance, the White design was standardized and during the war built by White, Autocar and Diamond T as the M3 half-track. Nearly 41,000 would be produced during the war, along with an additional 13,500 units of the smaller M2. Variants included the M13, M15 and M16 gun motor carriage, the M21 mortar carrier, and the T19 and T30 Howitzer motor carriages. Created in 1944, this TM 9-710 technical manual includes many photos and over 350 pages of text that reveal a great deal about the weapon's design and capabilities. Intended as a manual for those charged with operation and maintenance, this manual shows many aspects of its engine, cooling, power train and other systems.

Kings of Battle US Self-Propelled Howitzers, 1981-2022 David Grummitt, 2023-12-30 It is for good reason that artillery is known as the 'king of battle'. In World War II the United States made good use of self-propelled howitzers, including those based on the chassis of the M4 Sherman tank. After 1945 the US developed both light and medium self-propelled howitzers, based on the M24 Chaffee, M41 Walker Bulldog and Sherman chassis. The first designs were plagued with problems and self-propelled artillery played only a minor role in the Korean War. By the mid 1960s, however, the M107 175mm, M109 155mm and M110 203mms self-propelled howitzers had entered service, and they proved their effectiveness during the Vietnam War. The M107 was relatively short-lived in US service, being retired in the late 1970s, but it played an important role with the Israel defense Forces. The M109 served with the US Army, as well as in many NATO armies and elsewhere, and saw action in the Middle East, in the Balkans, during the liberation of Kuwait, and in the invasion of Iraq. The M109 has now been in service for some sixty years and remains, in the guise of the M109A7, the current self-propelled howitzer of the US Army. The larger M110 203mm self-propelled howitzer similarly saw

widespread service before it was retired in the early 1990s. Despite the emergence of rocket artillery, such as the Multiple Launch Rocket System, the self-propelled howitzer will remain one of the principal weapons systems of US military in the decades to come. The M107, M109 and M110 have proved popular subjects among modellers with a variety of kits available from the major manufacturers. As well as describing in detail the technical development and operational history of these guns, this book gives a full account of the wide range of modelling kits and accessories available in all the popular scales. Included is a modelling gallery which covers a range of variants and a section of large-scale color profiles which provide both information and inspiration for modellers and military enthusiasts alike.

Tm9-1729c Ordnance Maintenance Light Tank M24 Chaffee: And 155-MM Howitzer Motor Carriage M41

Technical Manual War Department, 2013-05-07 The Light Tank M24 was an American tank used during the later part of World War II and in postwar conflicts including the Korean War and, with the French, in the War in Algeria and the First Indochina War. In British service it was given the service name Chaffee, after the United States Army General Adna R. Chaffee, Jr., who helped develop the use of tanks in the United States armed forces. In April 1943, the Ordnance Corps, together with Cadillac division of General Motors, started work on the new project, designated Light Tank T24. Every effort was made to keep the weight of the vehicle under twenty tons. The armor was kept light, with the glacis plate only twenty five mm thick (but sloped at sixty degrees from the vertical). A new lightweight 75 mm gun was developed, a derivative of the gun used in the B-25H Mitchell bomber. The gun had the same ballistics as the M3, but used a thinly walled barrel and different recoil mechanism. The design also featured wider (sixteen inch) tracks and torsion bar suspension. It had a relatively low silhouette and a three-man turret. On October 15, 1943 the first pilot vehicle was delivered and production began in 1944 under the designation Light Tank M24. By the time production was stopped in August 1945, 4,731 M24s had left the assembly lines. The M41 155-mm Howitzer Motor Carriage was based on the M24 Chaffee Light Tank fitted with an M1 155-mm Howitzer. In addition to the Howitzer, the M41 carried twenty two rounds of 155-mm ammunition. Also known as the Gorilla, the M41 eventually saw action in Korea. Created in 1947,

this technical manual reveals a great deal about both the Chaffee's and M41's design and capabilities. Intended as a manual for those charged with maintenance, it details many aspects of the Chaffee's track and suspension, hull, turret and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.
