American Tanks & AFVs of World War II Michael Green,2014-07-20 The entry of the US into World War II provided the Allies with the industrial might to finally take the war to German and Japanese forces across the world. Central to this was the focus of the American military industrial complex on the manufacture of tanks and armoured fighting vehicles. Between 1939 and 1945, 88,140 tanks and 18,620 other armored vehicles were built – almost twice the number that Germany and Great Britain combined were able to supply. In this lavishly illustrated volume, armour expert Michael Green examines the dizzying array of machinery fielded by the US Army, from the famed M4 Sherman, M3 Stuart and M3 Lee through to the half-tracks, armored cars, self-propelled artillery, tank destroyers, armored recovery vehicles and tracked landing vehicles that provided the armoured fist that the Allies needed to break Axis resistance in Europe and the Pacific. Publishing in paperback for the first time and packed with historical and contemporary colour photography, this encyclopedic new study details the design, development, and construction of these vehicles, their deployment in battle and the impact that they had on the outcome of the war.

American Thunder Richard C. Anderson Jr.,2024-05-01 If the machine gun changed the course of ground combat in the First World War, it was the tank that shaped ground combat in World War II. The tank was introduced in World War I in an effort to end the stalemate of the machine gun versus barbed-wire trenches, and by World War II, the tank's mobility and firepower became a rolling, thundering difference-maker on the battlefield. In this detailed, deeply researched, and heavily illustrated book, tank expert Richard Anderson tells the story of how the United States developed its armored force, turning it into a war-winning weapon in World War II that powered American ground forces and supplied armies around the world, including the British and Soviets. For decades, American tanks of World War II have been undervalued in comparisons with German and Soviet tanks—and it's true that the best of American armor tended to underperform the best of German and Soviet armor during the war. That's because the U.S. had a different goal: not only to create battleworthy tanks like the Sherman, and to develop other tanks, but also to supply American allies with serviceable, combat-ready tanks. The United States did all this, but until now the complete story of American tanks in World War II has yet to be told. Anderson's book is deeper and more thorough a chronicle of American tanks in World War II than has ever been done. This book is colorful, vivid, and thought-provokingly insightful on how the U.S. produced a tank force capable of conducting its own battlefield efforts and sustaining key allies around the world. This will be the go-to volume on American tanks for years to come.

Handbook of Glycosyltransferases and Related Genes Naoyuki Taniguchi,Koichi Honke,Minoru Fukuda,2011-06-28 The so-called postgenomic research era has now been launched, and the field of glyco biology and glycotechnology has become one of the most important areas in life science because glycosylation is the most common post-translational modification reaction of proteins in vivo. On the basis of Swiss-Prot data, over 50% proteins are known to undergo glycosylation, but in fact the actual functions of most of the sugar chains in the glycoconjugates remain unknown. The complex carbohydrate chains of glycoproteins, glycolipids, and proteoglycans represent the secondary gene products formed through the reactions of glycosyl transferases. The regulation of the biosynthesis of sugar chains is under the control of the expression of glycosyltransferases, their substrate specificity, and their localization in specific tissue sites. There is a growing body of evidence to suggest that these enzymes play pivotal roles in a variety of important cellular differentiation and developmental events, as well as in disease processes. Over 300 glycosyltransferases appear to exist in mammalian tissues. If the genes that have been purified and cloned from various species such as humans, cattle, pigs, rats and mice are counted as one, approximately 110 glyco genes that encode glycosyltransferases and related genes have been cloned at present, and this number continues to grow each day. However, most of the functions of the glycosyltransferase genes and related genes are unknown. This fact has stimulated numerous new and interesting approaches in molecular biological investigations.

Allied Tanks of the Second World War Michael Green,2017-03-30 Expert author Michael Green has compiled a full inventory of the tanks developed and deployed by the Allied armies during the six year war against Nazi Germany and her Axis partners. There were four categories of tank: Light, Medium, Heavy and Super Heavy. Combat experience proved Light tanks (such as the Stuart and T-26) to be ineffective. Medium tanks (the US M4 series, named Sherman by the British, and Russian T-34) soon dominated with their fire power, protection and mobility. The later stages of the War required the Allies to answer the Axis Panther and Tiger tanks with up-gunned and up-armoured second generation M4s, T-34-85s and the Sherman Firefly. Totally new heavy tanks such as the M-26, Pershing, Soviet KV-1 series and the British Centurion only saw action in the final months. Allied Tanks of the Second World War covers all these categories in detail as well as the few super heavy tanks such as the French Char 2C and the TOG. For an informed and highly illustrated work this book has no comparable rival.

Pershing vs Tiger Steven J. Zaloga,2017-09-21 During the final battles on World War II's Western Front, the legendary German Tiger I heavy tank clashed with the brand-new M26 Pershing fielded by the United States. The Tiger I had earned a formidable reputation by the end of 1944, although its non-sloped armour and poor mobility meant it was being superseded by the Tiger II or 'King Tiger'. While the Tiger I had been in the front lines since 1942, the US Pershing first entered combat in late February 1945, and more than 20 Pershings would see action before war's end. This book examines the dramatic Tiger/Pershing duel at Elsdorf in Germany, and also assesses the clashes between German armour and the sole 'Super Pershing' deployed to Europe. Featuring full-colour artwork, carefully chosen photographs and specially commissioned maps, this is the story of the first US heavy tanks in combat with the fearsome Tiger I during the last months of World War II in Europe.

Multiplets of Transition-Metal Ions in Crystals Satoru Sugano,2012-12-02 Multiplets of Transition-Metal Ions in Crystals provides information pertinent to ligand field theory. This book discusses the fundamentals of quantum mechanics and the theory of atomic spectra. Comprised of 10 chapters, this book starts with an overview of the qualitative nature of the splitting of the energy level as well as the angular behavior of the wavefunctions. This text then examines the problem of obtaining the energy eigenvalues and eigenstates of the two-electron systems, in which two electrons are accommodated in the t_{2g} and e_g shells in a variety of ways. Other chapters discuss the ligand-field potential, which is invariant to any symmetry operation in the group to which symmetry of the system belongs. This book discusses as well the approximate method of expressing molecular orbitals (MO) by a suitable linear combination of atomic orbitals (AO). The final chapter discusses the MO in molecules and the self-consistent field theory of Hartree-Fock. This book is a valuable resource for research physicists, chemists, electronic engineers, and graduate students.

The Patton Tank Michael Green,2012-12-19 The military historian and tank expert examines the evolution of the Patton tank through archival photographs across four decades of armored warfare. In the early Cold War years, a tank more powerful than the Sherman or Pershing was needed. The first Patton tanks—the M46s—were converted Pershings which saw service in Korea. The M47, with a more effective 90mm gun and turret, was then developed to counter the Soviet military threat. Later, the diesel-powered M48A3 was used by the US Marine Corps and US Army in South Vietnam. Further Patton models emerged in the coming decades, including the diesel-powered M60 series with its British-designed 105mm gun. Pattons were also made into specialist vehicles, including anti-aircraft, flame throwers, recovery and combat engineer vehicles. Other countries, notably Israel, made their own modifications to their M48s as well. In this volume full of superbly detailed wartime photographs, American tank expert Michael Green discusses all of these variations and their uses in combat zones around the world.

Another River, Another Town John P. Irwin,2013-03-27 Many narrative accounts of men in combat during World War II have conveyed the horrors and emotions of warfare. However, not many reveal in such an intimate way the struggle of innocent youth to adapt to the primitive code of “kill or be killed,” to transform from lads into combat soldiers. Another River, Another Town is the story of John P. Irwin, a teenage tank gunner whose idealistic desire to achieve heroism is shattered by the incredibly different view of life the world of combat demands. He comes to the realization that the realm of warfare has almost nothing in common with the civilian life from which he has come. The interminable fighting, dirt, fatigue, and hunger make the war seem endless. In addition to the killing and destruction on the battlefield, Irwin and his crew are caught up in the unbelievable depravity they encounter at Nordhausen Camp, where slave laborers are compelled to work themselves to death manufacturing the infamous V-rockets that have been causing so much destruction in London, and that are expected one day to devastate Washington, D.C. At the end of the war, the sense of victory is, for these men, overshadowed by the intense joy and relief they experience in knowing that the fighting is at last over.

Death Traps Belton Y. Cooper,2007-12-18 “An important contribution to the history of World War II . . . I have never before been able to learn so much about maintenance methods of an armored division, with precise details that underline the importance of the work, along with descriptions of how the job was done.”—Russell F. Weigley, author of Eisenhower’s Lieutenants “Cooper saw more of the war than most junior officers, and he writes about it better than almost anyone. . . . His stories are vivid, enlightening, full of life—and of pain, sorrow, horror, and triumph.”—Stephen E. Ambrose, from his Foreword “In a down-to-earth style, Death Traps tells the compelling story of one man’s assignment to the famous 3rd Armored Division that spearheaded the American advance from Normandy into Germany. Cooper served as an ordnance officer with the forward elements and was responsible for coordinating the recovery and repair of damaged American tanks. This was a dangerous job that often required him to travel alone through enemy territory, and the author recalls his service with pride, downplaying his role in the vast effort that kept the American forces well equipped and supplied. . . . [Readers] will be left with an indelible impression of the importance of the support troops and how dependent combat forces were on them.”—Library Journal “As an alumnus of the 3rd, I eagerly awaited this book’s coming out since I heard of its release . . . and the wait and the book have both been worth it. . . . Cooper is a very polished writer, and the book is very readable. But there is a certain quality of ‘you are there’ many other memoirs do not seem to have. . . . Nothing in recent times—ridgerunning in Korea, firebases in Vietnam, or even the one hundred hours of Desert Storm—pressed the ingenuity and resolve of American troops . . . like WWII. This book lays it out better than any other recent effort, and should be part of the library of any contemporary warrior.”—Stephen Sewell, *Armor Magazine* “Cooper’s writing and recall of harrowing events is superb and engrossing. Highly recommended.”—Robert A. Lynn, *The Stars and Stripes* “This detailed story will become a classic of WWII history and required reading for anyone interested in armored warfare.”—Publishers Weekly (starred review) “[Death Traps] fills a critical gap in WWII literature. . . . It’s a truly unique and valuable work.”—G.I. Journal
