CRC Handbook of Avian Body Masses, Second Edition John B. Dunning, Jr.,2007-12-05 See what's new in the Second Edition: · Number of species included is increased from 6300 to over 8700, about 85% of the world's birds · Better data for many of the species included in the first edition — an exhaustive compilation of new data published from 1992 through 2007 · More comprehensive coverage of Latin America, Japan, Taiwan, Southeast Asia, and more coverage of research published in non-English language journals In 1992 the CRC Handbook of Avian Body Masses broke new ground by providing a compilation of body masses for 6300 species, about two-thirds of the world's species. The handbook instantly became the gold standard, cited in hundreds of scientific studies and a prominent fixture on the shelves of many ornithologists. Keeping the format that made the first edition so popular, the second edition features dramatic changes both in species coverage and the data quality. The new edition compiles the results of new samples that have been published for many of the birds included in the first edition, and data found for about 2400 new species, increasing the coverage to over 8700 species, about 85% of the world's birds. The order of species and families has been revised in the text to fit with the latest publications in avian taxonomy and systematics. The second edition includes an accompanying CD-ROM with a searchable electronic database.

A Photographic Field Guide to the Birds of India, Pakistan, Nepal, Bhutan, Sri Lanka, and Bangladesh Bikram Grewal,Garima Bhatia,2017-04-25 This is the only comprehensive photographic field guide to the birds of the entire Indian subcontinent. Every distinct species and subspecies—some 1,375 in all—is covered with photographs, text, and maps. The guide features more than 4,000 stunning photographs, many never before published, which have been carefully selected to illustrate key identification features of each species. The up-to-date facing-page text includes concise descriptions of plumage, voice, range, habitat, and recent taxonomic changes. Each species has a detailed map reflecting the latest distribution information and containing notes on status and population density. The guide also features an introduction that provides an overview of birdlife and a brief history of ornithology in India and its neighbors. The result is an encyclopedic photographic guide that is essential for everyone birding anywhere in the subcontinent. Covers all 1,375 subcontinental bird species Features more than 4,000 stunning photographs to aid quick field identification Includes up-to-date facing-page text and range maps Contains concise descriptions of plumage, voice, habitat, and much more

A Field Guide to the Birds of China John Ramsay MacKinnon,Karen Phillipps,2000-06-08 China is one of the largest countries in the world, covering 7% of the earth's land surface, and encompassing a hugely diverse range of habitats. As a result it boasts a rich and diverse avifauna, including some of the most spectacular and fascinating birds to be found anywhere in the world. This is the first truly comprehensive, taxonomically modern, and fully illustrated field guide to the Chinese birds. Over 1300 species are illustrated in 128 colour paintings, and fully described in the text. Colour distribution maps are provided for all illustrated species. The authors have both lived and worked in the region for many years, and have extensive experience of writing and illustrating bird guides. This important book will be a landmark in field guide publishing.

Robins and Chats Peter Clement,2016-01-28 This authoritative handbook, part of the Helm Identification Guides series, looks in detail at the world's 170 species of robins and chats. This large family of small passerines was formerly considered to be part of the thrush

family (Turdidae), but is now usually treated as a separate family, Muscicapidae, together with the Old World flycatchers. The vast majority of species are Eurasian or African, with only a handful of species straying into the New World or Australasia. The Australian Robins, although superficially similar, have long been regarded as a separate family. Robins and chats are a diverse family comprising both highly colourful and visible species, such as the robin-chats of Africa, as well as some of the most skulking and elusive birds, such as the shortwings of Asia. Many chats, such as the well-known Nightingale, are renowned songsters, and a good number are highly sought-after by world listers for their extreme rarity or simply because they are hard to see. This book discusses the identification and habits of these birds on a species-by-species basis, bringing together the very latest research with accurate range maps, more than 600 stunning colour photographs that illustrate age and racial plumage differences, and 64 superb colour plates by the internationally renowned artist, Chris Rose. This authoritative and sumptuous book will be an essential purchase for all chat enthusiasts, and will become the standard reference on the subject for many years to come.

Handbook of Western Palearctic Birds, Volume 1 Hadoram Shirihi, Lars Svensson, 2018-08-27 This unique and spectacular handbook is the most complete and comprehensive photographic guide to the passerines of the Western Palearctic. Written by two of the world's most respected ornithologists, Hadoram Shirihi and Lars Svensson, it contains the most up-to-date information available on bird identification covering all aspects of plumage, moult, ageing and sexing, with sections on voice and other identification criteria, and detailed taxonomic notes. This first volume covers larks, hirundines, pipits and wagtails, bulbuls, accentors, robins, chats, wheatears, thrushes, prinias and cisticolas, and warblers. The exceptional text is backed up by a remarkable collection of almost 2,500 photographs, featuring a comprehensive range of plumages that illustrate every race and morph of each species in the region. This stunning handbook will be the definitive reference for the region for years to come - no birder's shelf will be complete without it.

The Status of Birds in Britain and Ireland David Parkin, Alan Knox, 2010-01-01 A detailed and up to date assessment of the status and distribution of every species of bird in Britain and Ireland.

The Birds World Nicolae Sfetcu, 2014-11-27 Birds are among the most extensively studied of all animal groups. Hundreds of academic journals and thousands of scientists are devoted to bird research, while amateur enthusiasts (called birdwatchers or, more commonly, birders) probably number in the millions. Birds are categorised as a biological class, Aves. The earliest known species of this class is *Archaeopteryx lithographica*, from the Late Jurassic period. According to the most recent consensus, Aves and a sister group, the order Crocodilia, together form a group of unnamed rank, the Archosauria. Phylogenetically, Aves is usually defined as all descendants of the most recent common ancestor of modern birds (or of a specific modern bird species like *Passer domesticus*), and *Archaeopteryx*. Modern phylogenies place birds in the dinosaur clade Theropoda. Modern birds are divided into two superorders, the Paleognathae (mostly flightless birds like ostriches), and the wildly diverse Neognathae, containing all other birds.

Coniferous Forests F.A. Andersson, 2005-12-15 Starting with an account of the history and distribution of the conifers, this volume describes the most important areas in Asia, Europe, North and South America with conifer forests. The last in the Ecosystem of the World series, it deals with the functional aspects of the conifer forests, such as physiology, production, biomass, and more.

Field Guide To The Birds Of South-East Asia Craig Robson, 2020-02-06 This is the first-time flexi-cover edition of this classic field guide, which is the definitive volume on the region's birdlife. This award-winning book, which was first published in 2000, was fully updated in 2009 to include 76 new species for the region that were recent new discoveries for science, taxonomic 'splits' or had been recorded there for the first time. This comprehensive field guide to the birds of South-East Asia covers all of the 1,327 species recorded in the region and each has been fully illustrated. This edition has many new artworks and 16 more colour plates than the original guide, and the text has been meticulously updated to take in all the most recent information. The vast diversity of South-East Asian birdlife attracts increasing numbers of birdwatchers each year. Covering Thailand, Vietnam, Singapore, Peninsular Malaysia, Myanmar, Laos and Cambodia, this unique and indispensable guide covers in detail the identification, voice, breeding, status, habitat and distribution of all the species and distinctive subspecies of the region.

A World Checklist of Birds Burt L. Monroe, Charles G. Sibley, 1997-02-27 Many field ornithologists record where and when they identify species of birds, especially when they encounter a species out of its normal range or for the first time. Until now, however, a checklist based on the Sibley-Ahlquist-Monroe classification has not been available. In this book, Burt L. Monroe, Jr., and Charles G. Sibley provide a list of 9,702 living avian species based on their 1990 book *Distribution and Taxonomy of Birds of the World* and its 1993 Supplement.

A Checklist of the World's Bird Species David Boyd, 2006-05 A checklist of the world's 9900+ bird species with Latin and English names. Subspecies are not covered. Boxes are also provided for the reader to record their own observations.
