Tatra military vehicles from 1918 to 1945 Radomír Zavadil,2008

Tatra Ivan Margolius,John G. Henry,1990

Život s erbem Tatry Milan Galia,Milan Švihálek,2009-01-01 Život hlavního konstruktéra Tatry Kopřivnice - ing. Milana Galii - lze v pravém slova smyslu charakterizovat jako život s erbem Tatry. Dvacet čtyři let ve funkci je nejdelší doba ze všech jeho předchůdců a velmi těžko někdo tento rekord překoná. Vzpomínky Milana Galii populárním způsobem přibližují dobrodružství vynalézání a hledání nových technických principů, dobové souvislosti i osudy jednotlivých vozů v 2. polovině 20. století, v době, kdy Tatra patřila k největším výrobcům terénních automobilů v Evropě.

*Arctic and Alpine Mycology II* Gary A. Laursen,Joseph F. Ammirati,Scott A. Redhead,2013-03-09 During the summer of 1980, the First International symposium on Arctic and Alpine Mycology (ISAM-I) was held at the then extant Naval Arctic Research Laboratory near Barrow, Alaska, U.S.A., well within the Arctic Circle (Laursen and Ammirati, *Arctic and Alpine Mycology. The First International symposium on Arcto-Alpine Mycology. Univ. Wash. Press, 1982*). The facility is currently owned and operated by the Utkeagvik Inupiat community and is named the National Academic and Research Laboratory, thus retaining its acronym NARL. Twenty-five scientists participated in that historic first meeting. Their interests in the fungi spanned a vast geographic area of cold dominated habitats in both the northern and southern hemispheres that included four continents (N. and S. America, Eurasia,and Antarctica), nine countries, and numerous islands

ranging from Greenland to Jan Mayen in the Svalbard group. ISAM-I helped to develop ongoing interests and initiate others. This is what ISAM-I founders hoped would happen. As a result, the organizing committee for ISAM-II was formed. Its mandate was to: involve a maximum of one third new participants in future ISAM meetings: divide the responsibility for organizing future meetings at sites located in areas of interest to research thrusts in Arctic and alpine environments: keep the number of participants small enough to ensure manageability, taking full advantage of field collecting opportunities with minimal complications and cost.

**The Excretory Function of Higher Plants** Victoria V Roshchina, Valentina D.

Roshchina,2012-12-06 The secretory activity of plants is a manifestation of the fundamental property of all living organisms: the ability to exchange substances and energy with the environment. This book summarizes today's knowledge of all such secretory activities of higher plants. It equally considers the cellular aspects, intracellular and external secretion, gas excretion and the excretion of substances under extreme conditions as well as the biological effects of plant excreta.

**Second Assessment of Climate Change for the Baltic Sea Basin** The BACC II Author

Team,2015-04-03 This book is an update of the first BACC assessment, published in 2008. It offers new and updated scientific findings in regional climate research for the Baltic Sea basin. These include climate changes since the last glaciation (approx. 12,000 years ago), changes in the recent past (the last 200 years), climate projections up until 2100 using state-of-the-art regional climate models and an assessment of climate-change impacts on terrestrial, freshwater and marine ecosystems. There are dedicated new chapters on sea-level rise, coastal erosion and impacts on

urban areas. A new set of chapters deals with possible causes of regional climate change along with the global effects of increased greenhouse gas concentrations, namely atmospheric aerosols and land-cover change. The evidence collected and presented in this book shows that the regional climate has already started to change and this is expected to continue. Projections of potential future climates show that the region will probably become considerably warmer and wetter in some parts, but dryer in others. Terrestrial and aquatic ecosystems have already shown adjustments to increased temperatures and are expected to undergo further changes in the near future. The BACC II Author Team consists of 141 scientists from 12 countries, covering various disciplines related to climate research and related impacts. BACC II is a project of the Baltic Earth research network and contributes to the World Climate Research Programme.

*Karmasiddhiprakarana* Vasubandhu, 1988 Under the influence of his teacher, Louis de la Valle Poussin, Prof. Lamotte published several works in French, which were primarily editions, translations and commentaries on Tibetan and Chinese Buddhist texts. The theories and concepts contained in this particular work are closely related to those of the *Abhidharmakosa*, and as such it makes a valuable companion to that larger work. Here Prof. Pruden has provided a masterful English translation of Prof. Lamotte's work, and has added a brief biography of Prof. Lamotte and his scholarly accomplishments to familiarize the reader with this great scholar of Buddhism.

**Advanced Linear Modeling** Ronald Christensen, 2019-12-20 This book introduces several topics related to linear model theory, including: multivariate linear models, discriminant analysis,

principal components, factor analysis, time series in both the frequency and time domains, and spatial data analysis. This second edition adds new material on nonparametric regression, response surface maximization, and longitudinal models. The book provides a unified approach to these disparate subjects and serves as a self-contained companion volume to the author's *Plane Answers to Complex Questions: The Theory of Linear Models*. Ronald Christensen is Professor of Statistics at the University of New Mexico. He is well known for his work on the theory and application of linear models having linear structure.

*Limnology of Mountain Lakes* J. Fott, 2013-03-09 This volume contains papers presented either in oral or poster form at the international symposium 'Limnology of Mountain Lakes', held at Stará Lesná (Slovakia) between 1 and 7 July 1991. Several papers covered contributions from the fields of physical and chemical limnology, palaeolimnology, zooplankton, phytoplankton and phytobenthos, and bacteria. Acidification, a process affecting water chemistry and biota of many mountain lakes in Europe was dealt with also. A series of papers on the lakes in Sumava has highlighted different aspects of these lakes, which are in the last stage of acidification. Other geographical areas covered extensively were the Tatras and the Alps.

Soil and Water Pollution Monitoring, Protection and Remediation Irena Twardowska, Sebastian Stefaniak, Herbert E. Allen, Max M. Häggblom, 2007-04-30 This book details the state-of-the art in early warning monitoring of anthropogenic pollution of soil and water. It is unique with regard to its complex, multidisciplinary, mechanistic approach. Top scientists establish links and strengthen weak

connections between specific fields in biology, microbiology, chemistry, biochemistry, toxicology, sensoristics, soil science and hydrogeology.

**Global Glacier Changes** Michael Zemp, United Nations Environment Programme, World Glacier Monitoring Service, 2008 This publication is about the world's surface ice on land outside the two polar ice sheets. It provides a sound and well illustrated review on the basis of available data, the global distribution of glaciers and ice caps and their changes since maximum extents of the so-called Little ice Age. The work also presents the latest state of knowledge on glacier changes and discusses the challenges of the 21st century for the monitoring of glaciers and ice caps.
