*Aries Rocket Flight Vibration Environment, TEM-2, Multispectral Measurements Program* Russell G. Steeves, 1980 An in-flight vibration measurement was made on the second Aries rocket launch of a series. The data are analyzed and presented in this paper. Results here validate those obtained in the first test and confirm that the Aries has a very mild vibration environment. (Author).

*Scanning Transmission Electron Microscopy* Stephen J. Pennycook, Peter D. Nellist, 2011-03-24 Scanning transmission electron microscopy has become a mainstream technique for imaging and analysis at atomic resolution and sensitivity, and the authors of this book are widely credited with bringing the field to its present popularity. Scanning Transmission Electron Microscopy (STEM): Imaging and Analysis will provide a comprehensive explanation of the theory and practice of STEM from introductory to advanced levels, covering the instrument, image formation and scattering theory, and definition and measurement of resolution for both imaging and analysis. The authors will present examples of the use of combined imaging and spectroscopy for solving materials problems in a variety of fields, including condensed matter physics, materials science, catalysis, biology, and nanoscience. Therefore this will be a comprehensive reference for those working in applied fields wishing to use the technique, for graduate students learning microscopy for the first time, and for specialists in other fields of microscopy.

Handbook on Antimicrobial Resistance Mukteswar Prasad Mothadaka, Murugadas Vaiyapuri, Madhusudana Rao Badireddy, Chandragiri Nagarajrao Ravishankar, Rajesh Bhatia, Joykrushna Jena, 2023-07-18 Antimicrobial resistance (AMR) is a global public health threat. The menace of antimicrobial resistance is present across health, animal, agriculture, food, and environment sectors. It, therefore, requires an interdisciplinary combat approach- the one health approach, envisaged by the FAO-UNEP-WHO-WOAH Quadripartite (Food and Agriculture Organization of the United Nations (FAO), the UN Environment Programme (UNEP), the World Health Organization (WHO) and the World Organisation for Animal Health (WOAH). This comprehensive reference book provides a thorough understanding of antimicrobial resistance across different sectors. It presents deep insights and gives a global perspective on antimicrobial resistance for policymakers. The book offers essential and up-to-date information that enables researchers from multiple fields to design research on antimicrobial resistance. The book discusses molecular mechanisms and antibiotic resistance genes of significant antimicrobial-resistant pathogens, regulatory frameworks available worldwide, and mitigation strategies across the sectors, including probiotics, prebiotics, antimicrobial peptides, bacteriophages, phytochemical compounds, immunostimulants, vaccines, bacteriocins, etc. It

compiles essays from leading experts in the field of antimicrobial resistance research. The book is meant for students and researchers in microbiology, medical microbiology, and public health. It is also helpful for clinicians and policymakers.

*The application of in situ liquid cell TEM in advanced battery research* Yi Yuan, Shengda D. Pu, Xiangwen Gao, Alex W. Robertson, 2023-07-05 The fast development of modern battery research highly relies on advanced characterisation methods to unveil the fundamental mechanisms of their electrochemical processes. The continued development of in situ characterisation techniques allows the study of dynamic changes during battery cycling rather than just the initial and the final phase. Among these, in situ transmission electron microscopy (TEM) is able to provide direct observation of the structural and morphological evolution in batteries at the nanoscale. Using a compact liquid cell configuration, which allows a fluid to be safely imaged in the high vacuum of the TEM, permits the study of a wide range of candidate liquid electrolytes. In this review, the experimental setup is outlined and the important points for reliable operation are summarised, which are critical to the safety and

reproducibility of experiments. Furthermore, the application of in situ liquid cell TEM in understanding various aspects, including dendrite growth, the solid electrolyte interface (SEI) formation, and the electrode structural evolution in different battery systems, is systematically presented. Finally, challenges in the current application and perspectives of the future development of the in situ liquid cell TEM technique are briefly addressed.

**A Case Frame Grammar and Lexicon for the Book of Revelation** Paul L. Danove,2022-06-02 Paul Danove presents a case frame grammar and lexicon for the Book of Revelation, with three major goals. He first provides a step-by-step introduction to case frame analysis, incorporating various adaptations and extensions to address the needs of the study of the Greek of the New Testament. He then supplies a comprehensive case frame grammar and description of the syntactic, semantic, and lexical requirements that each predicator imposes on its complements. He finally generates a case frame lexicon that guides the interpretation and translation of each predicator occurrence in its grammatical contexts. Danove begins with the

method of analysis and description, with an overview of case frame grammar, an analysis of the events grammaticalized by the predicators in the Book of Revelation, descriptions of the usages of these events, and further specification of these descriptions. He then provides illustrative examples of the predicators with each usage, discusses the distinctive grammatical characteristics of Revelation, sets forth the protocols for generating lexicon entries, and concludes with the case frame lexicon for predicators in the text of Revelation.

*Vacuum Ultraviolet Airglow and Stellar Observations on the MSMP/TEM-1 Rocket Flight*  
Robert E. Huffman, 1980 This report describes airglow and stellar observations made on the TEM-1 rocket flight as a part of the Multispectral Measurements Program (MSMP). The observations were in the 1100 to 3000 Å wavelength range from 65 to about 230-km altitude, and they include a number of scans of the viewing direction through the earth's horizon. Night airglow emissions observed include the hydrogen Lyman alpha geocorona and the oxygen Herzberg bands. A number of stars were observed including alpha-Eridanus, which is found to match previous intensity measurements. The

instrumentation consists of filter photometers with 10 x 10 element digicon spatial detectors and a spectrometer using a 1 x 36 element digicon for spectral resolution. The report describes the instrumentation, discusses the observations, and compares the results with previous measurements. (Author).

Biology of Root Formation and Development Arie Altman, Yoav Waisel, 2012-12-06 This book contains the majority of the presentations of the Second International Symposium on the Biology of Root Formation and Development that was held in Jerusalem, Israel, June 23---28, 1996. Following the First Symposium on the Biology of Adventitious Root Formation, held in Dallas, USA, 1993, we perceived the need to include all kinds of roots, not only the shoot-borne ones. The endogenous signals that control root formation, and the subsequent growth and development processes, are very much alike, regardless of the sites and sources of origin of the roots. Therefore, we included in the Second Symposium contributions on both shoot-borne (i.e., adventitious) roots and root-borne (i.e., lateral) roots. Plant roots have remained an exciting and an intriguing field of science. During the years that followed the first symposium, an exceptional proliferation of interest in root biology has developed, associated with the intensive research activity in this field and the contemporary developments in the understanding of root function and development. New methods have been applied, and old ideas and interpretations were reexamined. Altogether, it became necessary to update our viewpoints and to

expand them.
