The Politics of English Second Language Writing Assessment in Global Contexts Todd Ruecker,Deborah Crusan,2018-04-17 Reflecting the internationalization of the field of second language writing, this book focuses on political aspects and pedagogical issues of writing instruction and testing in a global context. High-stakes assessment impacts the lives of second language (L2) writers and their teachers around the world, be it the College English Test in China, Common Core-aligned assessments in the U.S., English proficiency tests in Poland, or the material conditions (such as access to technology, training, and other resources) affecting a classroom. With contributions from authors working in ten different countries in a variety of institutional contexts, the chapters examine the uses and abuses of various writing-related assessments, and the policies that determine their form and use. Representing a diverse range of contexts, methods, and disciplines, the authors jointly call for more equitable testing systems that consider the socioeconomic, psychometric, affective, institutional, and needs of all students who strive to gain access to education and employment

these case studies, this volume demonstrates that the suburbs are a crucial nexus for sustainability in the United States. Because suburbs have been overlooked in most green initiatives, and because they play such a vital role in the future of American housing and development, these essays call for more research and continued creative innovation in these areas. Imagerie fonctionnelle par positons en oncologie nucléaire Jean-Luc

Moretti,Pierre Weinmann,Feyzi Tamgac,Pierre Rigo,2004-05-12 La tomographie à émission de positons au 18 Fluorodesoxyglucose (TEP 18FDG) est devenue une technique incontournable dans la prise en charge de la plupart des cancers. Après un rappel sur les indications et les performances de la TEP en cancérologie, les auteurs, grâce à une iconographie riche, démontrent l'intérêt de ce mode d'imagerie dans le choix de la stratégie thérapeutique,

la définition des champs de radiothérapie et le suivi thérapeutique.

Comprehensive Organometallic Analysis T.R. Crompton,2012-12-06 It is now some sixteen years since the author's first series of books on the analysis

of organometallic compounds. Many developments in the subject have occurred since that time and a new book on the subject is now overdue. The present book aims to provide a comprehensive review of the subject. It covers not only all aspects of the analysis of organometallic compounds but also contains two additional chapters, dealing with environmental analysis and the use of chelates of metals in the determination of very low concentrations of organic metals. Whilst reviewing the literature for the present book, it was observed that whereas papers published prior to 1973 dealt almost exclusively with various forms of analysis, a high proportion of those published during the past ten years were concerned with the application of proven or newly developed methods to the determination of organometallic compounds in environmental samples such as water, air, soil, river and ocean sediments, fish life and biota samples. An increasing range of elements including mercury, lead, arsenic, tin, antimony, selenium and manganese are now being found in organically bound forms in the environment, some resulting from pollution, others formed in nature by bacterial processes. As many of these substances have appreciable implications to human and animal health and the ecosystem as a whole, it was considered that it would be timely to include a separate chapter in the book devoted entirely to this subject.

Reverse Osmosis Membrane Research H. Lonsdale, 2012-12-06 This book had its origin in the symposium on Polymers for Desalination sponsored by the Division of Polymer Chemistry of the American Chemical Society and held in September, 1971 in Washington D. C. at the 162nd national meeting of the Society. However, the book is not simply the proceedings of that symposium. A number of additional papers were contributed by other workers in the field, and the original papers presented at the symposium have, for the most part, been expanded. The book thus represents a broad cross section of membrane research and development activities in the United States and abroad within the field of reverse osmosis. The purposes of the book are to bring attention to important new developments in this field, to suggest what the next generation of reverse osmosis equipment may look like, and to indicate where further research and development are needed. The vast majority of the papers collected here represent work supported by the Office of Saline Water of the United States Department of the Interior, and the emphasis here is clearly on the application of the reverse osmosis process to water purification. However, many of the concepts, methods, and conclusions are expected to be useful in other areas of membrane science and technology.
