Fishes of the Cambodian Mekong Walter J. Rainboth,Food and

Agriculture Organization of the United Nations,1996 This field guide covers the major resource groups likely to be encountered in the fisheries of the Cambodian Mekong. These groups include sharks, batoid fishes and bony fishes. The introduction outlines the geographical, environmental and ecological factors influencing fisheries, and the basic components of the fisheries of the Cambodian Mekong. As an aid to identification to higher taxonomic levels, a pictorial index to families and an illustrated guide to orders and families are included. Each species account provides scientific nomenclature, FAO names in English, local names, sizes, notes on fisheries, habitat and biology, and one or more illustrations. The guide is fully indexed and a list of related literature is appended. Finally, 27 colour plates are presented.

Vertebrate Genomes Jean-Nicolas Volff,2006-01-01 The publication of the first draft of the human genome five years ago marked the start of a new era of vertebrate comparative genomics. Genome draft sequences for chimpanzee, mouse, rat, dog, chicken as well as for several fish species are now available for the reconstruction of the evolutionary history of vertebrate genomes over the last 450 million years. This volume of *Genome Dynamics* presents a timely update on the past, present and future of major vertebrate genome projects. In 16 chapters, renowned specialists provide informative reviews on the current status of mammalian, bird, amphibian and fish genomics. In addition, a chapter on urochordate genomes is included. The reader will also find a useful overview of resources available for each genome as well as a description of the medical and economical perspectives opened by the different projects. This book is recommended reading for biologists interested in genetics, genomics, evolution and zoology.

Genome Mapping and Genomics in Laboratory Animals

Paul Denny,Chittaranjan Kole,2013-01-13 Mapping of animal genomes has generated huge databases and several new concepts and strategies, which are useful to elucidate origin,

evolution and phylogeny. Genetic and physical maps of genomes further provide precise details on chromosomal location, function, expression and regulation of academically and economically important genes. The series Genome Mapping and Genomics in Animals provides comprehensive and up-to-date reviews on genomic research on a large variety of selected animal systems, contributed by leading scientists from around the world. Laboratory animals are those species that by accident of evolution, domestication and selective breeding are amenable to maintenance and study in a laboratory environment. Many of these species are studied as 'models' for the biology and pathology of humans. Laboratory animals included in this volume are sea-urchin, nematode worm, fruit fly, sea squirts, puffer fishes, medaka fish, African clawed frog, mouse and rat.

The Fishes of the Indo-Australian Archipelago: Scleroparei, Hypostomides, Pediculati, Plectognathi, Opisthomi, Discocephali, Xenopterygii Max Weber, Lieven Ferdinand de Beaufort, 1962

Osteology, Phylogeny, and Higher Classification of the Fishes of the Order Plectognathi (Tetraodontiformes) James C. Tyler, 1980
The osteology of over 160 species of fossil and Recent plectognath or tetraodontiform fishes is described and illustrated in relation to the supposed phylogeny and proposed higher classification (subfamilial to ordinal levels) of this group of approximately 320 Recent species of primarily tropical and temperate forms of the Atlantic, Pacific, and Indian oceans. The history of the classification and of the previous work on the osteology of the order is reviewed, while one new species (*Acanthopleurus collettei*, Oligocene of Canton Glarus, Switzerland) and one new genus (*Eotetraodon*, Eocene of Monte Bolca, Italy) are described. Comparative inclusive and exclusive definition are given for all higher categories based on both external and internal anatomical features. The Order Plectognathi (Tetraodontiformes) is divided into two suborders, the Sclerodermi or Balistoidei and the Gymnodontes or Tetraodontoidei, with a variety of other infraordinal and

superfamilial categories, and 10 families, with subfamilial groupings in 4 of the latter.
