

The Mad Chemist

Experiland

The Mad Scientist teaches: Chemistry Experiland, 2010-09-23 Chemistry is the study of matter in the form of atoms, molecules, and the interactions that happen between them called chemical reactions. In its vast sense, chemistry is actually the science of all the available materials that make up the world around you. This includes all 'matter' that you can see, hear, smell, taste, and touch! Matter is everything that has mass and occupies space and all matter is composed out of the basic building blocks we call 'atoms'. Understanding how to predict and explain how matter change when they react to form new substances, is what chemistry and chemists are all about! The 50 projects contained in this science experiment e-book cover a wide range of Chemistry topics; from Chemical reactions to Elements & Compounds... there are even experiments on chemical power and endothermic reactions all designed for young students from grade 1 to 8! With this book, you are sure to find a project that interests you. When you are interested in a certain science topic, you will have more fun, and learn more, too! With the help of this book, you will construct many weird, wonderful and wacky experiments that you can have hours of fun with! Amongst many others, you will use chromatography to predict the 'fall' colour of a green leaf tree, make your own stalactites to learn about evaporation, make glue, toothpaste and caramel to experiment with chemical reactions, and use various substances to test if a substance is an acid or base! Other fun experiments include: growing your own crystals on

a piece of string, testing for the presence of iron in breakfast cereals, writing secret messages to your friends with your own invisible ink, using iodine to test for the presence of starch in foods, making a detector to predict the possibility of rain, making an exothermic reaction with vinegar & steel wool, using chemistry to make your dull coins shine, electro-plating a nail, making a 'lava lamp' with oil & water, making a fluid for copying newsprint to blank sheets of paper, making paper, snuffing out a candle by 'pouring' carbon dioxide gas over it, Testing how much Vitamin C is contained in various fruit juices and many, many more! When making these gadgets, you'll discover that science is a part of every object in our daily lives, and who knows, maybe someday you will become a famous inventor too! Science can be real simple and is actually only about understanding the world you live in! Science certainly does not need to be complicated formulas, heavy text books and geeky guys in white lab coats with thick glasses. Science experiments are an awesome part of science that allows you to engage in cool and exciting hands on learning experiences that you are sure to enjoy and remember! By working through the science experiments in this book, you will learn about science in the best possible way – by doing things yourself. Designed with safety in mind, most of the items you will need for the experiments, such as jars, aluminium foil, scissors and sticky tape, you can find around your home. Others, such as magnets, lenses or a compass, you will be able to buy quite cheaply at a hobby shop or hardware store.

The Mad Scientist teaches: Physics Experiland, 2010-09-23 Physics is all around us. It is in the electric light you turn on at night; the bicycle you ride to school; your wristwatch, CD player, or that swing ball set you got for Christmas! Physics is the branch of science concerned with the nature and properties of matter, energy, space and time. If you can name it, chances are physics is involved. Everything in the universe has some effect on every other thing. Physicists study those effects. The 78 projects contained in this science experiment e-book cover a wide range of Physics topics; from Optics & Light to Air pressure & Acoustics... there are also experiments on forces & motion, thermodynamics and mechanics all designed for young students from grade 1 to 8! With this book, you are sure to find a project that interests you. When you are interested in a certain science topic, you will have more fun, and learn more, too! With the help of this book, you will construct many weird, wonderful and wacky experiments that you can have hours of fun with! Amongst many others, you will make use of the power of air pressure to lift objects, make a tin can that will come back like a boomerang to learn about kinetic energy, use ice cubes to test if dark colours absorb more heat than light colours to experiment with thermodynamics, and make pulleys, levers and gears to study mechanics! Other fun experiments include: Making your own guitar out of an ordinary shoebox, using sound waves to make beautiful patterns on a wall, propelling a small boat with compressed air, learning about the power of moving air by making a windmill, launching your

own rocket with the power of air pressure, making a depth indicator similar to the gauges used on ships, a kaleidoscope, periscope, telescope, water turbine, cartesian diver, camera obscura, magnifying glass, thaumatrope and many, many more! When making these gadgets, you'll discover that science is a part of every object in our daily lives, and who knows, maybe someday you will become a famous inventor too! Science can be real simple and is actually only about understanding the world you live in! Science certainly does not need to be complicated formulas, heavy text books and geeky guys in white lab coats with thick glasses. The Mad Scientist teaches: Electricity & Magnetism Experiland, 2010-09-23 Electricity and magnetism has been the focus of research and study throughout history and despite its huge importance in our daily lives; we hardly ever stop to think what life would be like without electricity. Even though we take electricity for granted, it is used to enhance our lives in many areas from lighting, heating, and cooling our homes to powering our televisions,

computers and many other appliances we depend on every day! The 50 projects contained in this science experiment e-book cover a wide range of Electricity & Magnetism topics; from Static electricity & Electrical current to Resistance & Magnetism... there are even experiments on electro-magnetism and solid state electronics all designed for young students from grade 1 to 8! The Public Image of Chemistry Joachim Schummer, Bernadette Bensaude-Vincent, Brigitte van Tiggelen, 2007 Stem cells have the ability to differentiate into cells that are found throughout the body. This fundamental property of stem cells suggests that they can potentially be used to replace degenerative cells within the body, and regenerate the functional capacity of organ systems that have deteriorated because of disease or aging. This authoritative textbook provides an overview of the latest advances in the field of stem cell biology, spanning topics that include nuclear reprogramming, somatic cell cloning, and determinants of cell fate; embryonic stem cells for hematopoietic and pancreatic repair; adult stem cells for cardiovascular, neural, renal, and hepatic repair; and manufacturing of stem cells for clinical use.

The Mad Science Book Reto U. Schneider, 2008 You don't have to be an eccentric obsessive to be a scientist, but it helps... In The Mad Science Book, Reto Schneider tells the extraordinary tales of 100 of the more unusual experiments conducted across seven centuries of science. From the attempts of the 14th-century Dominican monk Theodoric von Freiberg to discover the cause of the rainbow, to the efforts of the 20th-century psychologist Harry Harlow

to be the perfect mother to a family of reluctant rhesus monkeys, these are stories that are often bizarre, sometimes mind-boggling - occasionally stomach-churning - but always diverting, informative and enlightening. Among the myriad delights on display in this cabinet of scientific curiosities are the renowned doctor from Padua who sat in a pair of scales for 30 years, recording the minutest changes in his weight; the sheep, the duck and the rooster who became the world's first air passengers; the disgusting Dr Stubbins Ffirth, who swallowed other people's vomit in an attempt to prove that yellow fever cannot be transmitted from one person to another; the hapless soldier Alexis St Martin, left with a hole in his stomach after an accident with a musket; and the ever-optimistic Charles-Édouard Brown-Séquard, who injected himself with essence of guinea pigs' testicles as an anti-ageing remedy. There is trivia here in abundance, but also quirky, but genuinely influential, science, notably Merrill Flood's and Melvin Dresher's experiments with choices of outcomes, which have been widely influential as game theory. A fizzing cocktail of fascinating science and rich entertainment, *The Mad Science Book* tells the extraordinary stories of some truly, madly, geeky people. It should be top of every self-respecting science buff's Christmas 2008 wishlist.

A Cultural History of Chemistry in the Nineteenth Century Peter J. Ramberg, 2023-12-14 *A Cultural History of Chemistry in the Nineteenth Century* covers the period from 1815 to 1914 and the birth of modern chemistry. The

elaboration of atomic theory - and new ideas of periodicity, structure, bonding, and equilibrium - emerged in tandem with new instruments and practices. The chemical industry expanded exponentially, fuelled by an increasing demand for steel, aluminium, dyestuffs, pharmaceuticals, and consumer goods. And the chemical laboratory became established in its two distinct modern settings of the university and industry. At the turn of the century, the discovery of radioactivity took hold of the public imagination, drawing chemistry closer to physics, even as it threatened to undermine the whole concept of atomism. The 6 volume set of the Cultural History of Chemistry presents the first comprehensive history from the Bronze Age to today, covering all forms and aspects of chemistry and its ever-changing social context. The themes covered in each volume are theory and concepts; practice and experiment; laboratories and technology; culture and science; society and environment; trade and industry; learning and institutions; art and representation. Peter J. Ramberg is Professor of the History of Science at Truman State University, USA. Volume 5 in the Cultural History of Chemistry set. General Editors: Peter J. T. Morris, University College London, UK, and Alan Rocke, Case Western Reserve University, USA.

Stories About Science in Law David S. Caudill, 2016-04-01 Presenting examples of how literary accounts can provide a supplement to our understanding of science in law, this book challenges the view that law and science are completely different. It focuses on stories which explore the relationship between law and science, especially cultural images of science that prevail in legal contexts. Contrasting with other studies of the transfer and construction of expertise in legal settings, this book considers the intersection of three interdisciplinary projects: law and science, law and literature, and literature and science. Looking at the appropriation of scientific expertise into law from these perspectives, this book presents an original introduction into how we can gain insight into the use of science in the courtroom and in policy and regulatory settings through literary sources.

The Public Image of Chemistry Joachim Schummer, Bernadette Bensaude-Vincent, Brigitte van Tiggelen, 2007 Popular associations with chemistry range from poisons, hazards, chemical warfare and environmental pollution to alchemical pseudoscience, sorcery and mad scientists, which gravely affect the public image of science in general. While chemists have merely complained about their public image, social and cultural studies of science have largely avoided anything related to chemistry. This book provides, for the first time, an in-depth understanding of the cultural and historical contexts in which

the public image of chemistry has emerged. It argues that this image has been shaped through recurring and unlucky interactions between chemists in popularizing their discipline and nonchemists in expressing their expectations and fears of science. Written by leading scholars from the humanities, social sciences and chemistry in North America, Europe and Australia, this volume explores a blind spot in the science-society relationship and calls for a constructive dialog between scientists and their public.

A Cultural History of Chemistry in the Modern Age Peter J. T. Morris, 2023-12-14 A Cultural History of Chemistry in the Modern Age covers the period from 1914 to the present. The impact of chemistry and the chemical industry on science, war, society, and the economy has made this era the "Chemical Age". Having prospered in the West, chemical science spread across the globe and slowly became more diversified in terms of its ethnic and gendered mix. After flourishing for sixty years, the chemical industry was impacted by the Oil Crisis of the 1970s and became almost invisible in the West. While the industry has clearly delivered many benefits to society-such as new materials and better drugs-it has been excoriated by critics for its impact on the environment. The 6 volume set of the Cultural History of Chemistry presents the first comprehensive history from the Bronze Age to today, covering all forms and aspects of chemistry and its ever-changing social context. The themes covered in each volume are theory and concepts;

practice and experiment; laboratories and technology; culture and science; society and environment; trade and industry; learning and institutions; art and representation. Peter J. T. Morris is Honorary Research Associate at the Science Museum, London, and at University College London, UK Volume 6 in the Cultural History of Chemistry set. General Editors: Peter J. T. Morris, University College London, UK, and Alan Rocke, Case Western Reserve University, USA.

The Mad Scientist Handbook 2 Joey Green, 2002 A collection of experiments that can be performed using ordinary household objects, such as making a battery from money or a beach ball-powered elevator, plus explanations of why each works.

Crazy Chemistry John Townsend, 2007 Describes how chemists throughout history have risked their lives with poisonous gases, lethal liquids, and dangerous reactions.

Horror Literature through History [2 volumes] Matt Cardin,2017-09-21 This two-volume set offers comprehensive coverage of horror literature that spans its deep history, dominant themes, significant works, and major authors, such as Stephen King, Edgar Allan Poe, and Anne Rice, as well as lesser-known horror writers. Many of today's horror story fans—who appreciate horror through movies, television, video games, graphic novels, and other forms—probably don't realize that horror literature is not only one of the most popular types of literature but one of the oldest. People have always been mesmerized by stories that speak to their deepest fears. *Horror Literature through History* shows 21st-century horror fans the literary sources of their favorite entertainment and the rich intrinsic value of horror literature in its own right. Through profiles of major authors, critical analyses of important works, and overview essays focused on horror during particular periods as well as on related issues such as religion, apocalypticism, social criticism, and gender, readers will discover the fascinating early roots and evolution of horror writings as well as the

reciprocal influence of horror literature and horror cinema. This unique two-volume reference set provides wide coverage that is current and compelling to modern readers—who are of course also eager consumers of entertainment. In the first section, overview essays on horror during different historical periods situate works of horror literature within the social, cultural, historical, and intellectual currents of their respective eras, creating a seamless narrative of the genre's evolution from ancient times to the present. The second section demonstrates how otherwise unrelated works of horror have influenced each other, how horror subgenres have evolved, and how a broad range of topics within horror—such as ghosts, vampires, religion, and gender roles—have been handled across time. The set also provides alphabetically arranged reference entries on authors, works, and specialized topics that enable readers to zero in on information and concepts presented in the other sections.

midnight's simulacra nick black, 2024-01-17 Code stoned. Debug sober. Document drunk. And never trust the Nuclear Regulatory Commission. Michael Luis Bolaño is the scion of Mexican oil wealth gone to rut in Texas. Sherman Spartacus Katz is the hyperliterate son of evangelical eccentrics from the North Georgia mountains. One hopes to restore what's been lost, the other to attain what never was. Together at an elite Institute of Technology they train as engineers. Together in the dark they study forbidden teachings. By graduation, they're formidably competent, audacious to a fault, and wholly

ungovernable. Need LSD precursors? Biosynthesize them in yeast. Need souped-up wheelchairs? Disarm the governors. Need enriched uranium? CO₂ TEA lasers in the garage. Where there's a black market, they disrupt it. Where there's no black market, they create one. midnight's simulacra is a hysterical, scientifically rigorous, and fastpaced thriller, a modern picaresque, a portrait of autists as young men, and unlike any other novel you've read.

Science Images and Popular Images of the Sciences Peter Weingart, Bernd Huppauf, 2012-10-12 What is a popular image of science and where does it come from? Little is known about the formation of science images and their transformation into popular images of science. In this anthology, contributions from two areas of expertise: image theory and history and the sociology of the sciences, explore techniques of constructing science images and transforming them into highly ambivalent images that represent the sciences. The essays, most of them with illustrations, present evidence that popular images of the sciences are based upon abstract theories rather than facts, and, equally, images of scientists are stimulated by imagination rather than historical knowledge.
