**Mary Meinking**

In the Country of Gazelles Fritz R. Walther,1995 When Fritz Walther was a young boy growing up in Dresden, his grandfather took him to the zoo, where he immediately fell in love with gazelles and dreamed of going to Africa to study them. He finally realized this dream in the 1960s, when he began a series of research field trips in the Serengeti National Park. His work led to numerous important studies in animal behavior and communication, especially on Thomson's and Grant's gazelles. Now, almost thirty years after his field research, Walther gives us a memoir of his experiences - the challenges, problems, and romance of studying animals on the Serengeti at a time when it was still one of the great wild areas of the world. This is a book for everyone who loves nature, cares about the environment, and wants to learn how a dedicated scientist unlocks the secrets of animal behavior.

Lion Vs. Gazelle Mary Meinking,2011-01-01 Discusses the physical characteristics and predatory behavior of lionesses in their hunt for gazelles and the things that gazelles do to escape from lionesses.

**The Behavior Guide to African Mammals** Richard Estes, 1991 A work of tremendous scope. . . . Amateur naturalists and tourists to the parks of Africa and finally professionals will find this a stimulating, well-documented summary.--John F. Eisenberg, Florida Museum of Natural History We have seen in the field how very helpful and informative The Behavior Guide is. Our knowledgeable safari guides turned often to their prized and already well-thumbed copies, and we continue to refer to ours now that we are back home.--Douglas F. Williamson, Jr., National Council, World Wildlife Fund, U.S. A fascinating, perceptive, and enjoyable travel companion heightens the pleasure of being afield. The Behavior Guide to African Mammals is that ideal companion. Lucid, accurate, and marvelously illustrated, the book is a basic reference for anyone interested in natural history.--George B. Schaller, author of The Serengeti Lion and The Deer and the Tiger A remarkable review of what is known about the larger African mammals.--A.R.E. Sinclair, The Ecology Group, University of British Columbia

Productivity Comparison Between Thomson's Gazelle and Cattle, and Their Relation to the Ecosystem in Kenya  
David Hopcraft, 1976

Gazelles and Their Relatives Fritz R. Walther, Elizabeth Cary Mungall, Gerald A. Grau, 1983-01-01 Gazelles and their relatives are important game animals in Africa and Asia; they have been successfully introduced into the US and they are also kept in zoos throughout the world. The occurrence of territorial behavior and its importance for the

reproduction of gazelles has been recognized for some time; thus specific information on their territorial behavior is desirable both for scientific and for practical reasons. This book provides the first concrete information on territory size and shape, duration of territorial periods, reoccupation of territories, phases of territoriality, the process of becoming territorial and of abandoning the territory, favorable and unfavorable environmental factors for territorial establishment, and territoriality as antagonist of migratory behavior. Also included are many previously unknown details of traditional territorial behavior, such as differences in the aggression of owners of territories toward (male) conspecifics of different age and social class, the structure of a marking system within a territory, etc.

Principles of Animal Locomotion R. McNeill

Alexander, 2003 This text provides an up-to-date overview of how animals run, walk, jump, crawl, swim, soar, hover, and fly. It covers all animals that power their movements with muscle, excluding only the tiny creatures that use cilia.

*Serengeti II* A. R. E. Sinclair, Peter Arcese, 1995-08

*Serengeti II: Dynamics, Management, and Conservation of an Ecosystem* brings together twenty years of research by leading scientists to provide the most thorough understanding to date of the spectacular Serengeti-Mara ecosystem in East Africa, home to one of the largest and most diverse populations of animals in the world. Building on the groundwork laid by the classic *Serengeti: Dynamics of an Ecosystem*, published in 1979 by the University of Chicago Press, this new book integrates studies of the ecosystem at every level—from the plants at the bottom of the visible food chain, to the many species of herbivores and predators, to the system as a whole. Drawing on new data from many long-term studies and from more recent research initiatives, and applying new theory and computer

technology, the contributors examine the large-scale processes that have produced the Serengeti's extraordinary biological diversity, as well as the interactions among species and between plants and animals and their environment. They also introduce computer modeling as a tool for exploring these interactions, employing this new technology to test and anticipate the effects of social, political, and economic changes on the entire ecosystem and on particular species, and so to shape future conservation and management strategies.

Bovids of the World José R. Castelló, 2016-04-12 The most comprehensive guide to the bovids of the world Bovids are a diverse group of ruminant mammals that have hooves and unbranched hollow horns. Bovids of the World is the first comprehensive field guide to cover all 279 bovid species, including antelopes, gazelles, cattle, buffaloes, sheep, and goats. From the hartebeest of Africa and the takin of Asia to the muskox of North America, bovids are among the world's most spectacular animals and this stunningly illustrated and easy-to-use field guide is an ideal way to learn more about them. The guide covers all species and subspecies of bovids described to date. It features more than 300 superb full-color plates depicting every kind of bovid, as well as detailed facing-page species accounts that describe key identification features, horn morphology, distribution, subspeciation, habitat, and conservation status in the wild. This book also shows where to observe each species and includes helpful distribution maps. Suitable for anyone with an interest in natural history, Bovids of the World is a remarkable and attractive reference, showcasing the range and beauty of these important mammals. The first comprehensive field guide to all 279 bovid species 337 full-color plates, with more than 1,500 photographs Detailed species accounts describe key identification features,

distribution, subspeciation, habitat, behavior, reproduction, and conservation status Fully updated and revised taxonomy, with common and scientific names Easy-to-read distribution maps

*Gazelles* Lynette Robbins, 2011-08-15 Graceful gazelles are known for being able to run at extremely high speeds. This is an important skill to possess when lions and cheetahs are in fast pursuit, hoping to make them dinner. Gazelles are also known to jump high into the air in a behavior called pronking or stotting. This exciting volume will explain the reason why gazelles do this and how they survive in a world full of predators.

*The Safari Companion* Richard D. Estes, 1999-12-01 The best field guide to observing and understanding the behavior of African mammals and an indispensable tool for naturalists traveling to Africa! The Second Edition has been fully revised and includes a new preface. The Safari Companion enables readers to recognize and interpret visible behavioral activities, such as courtship rituals, territorial marking, aggression, and care of young. Each account of over 80 species includes a behavioral table in which the unique actions of the hoofed mammals, carnivores, and primates are described for easy reference. Other features include: Expert Illustrations Useful maps showing major national boundaries, vegetation zones, and game parks An extensive glossary Tips on wildlife photography A list of organizations working to protect African wildlife The best behavioral field guide ever.—Sy Montgomery, author of *Tamed and Untamed* The book is more than a field guide; it is a valuable tool for conservation.—Kathryn S. Fuller, President, World Wildlife Fund (U.S.A.)

Wildlife Conservation by Sustainable Use H.H.T Prins, Jan Geu Grootenhuis, Thomas T. Dolan, 2012-12-06 One of the major challenges of sustainable development is the interdisciplinary nature of the issues involved. To this end, a team of conservation biologists, hunters, tourist operators, ranchers, wildlife and land managers, ecologists, veterinarians and economists was convened to discuss whether wildlife outside protected areas in Africa can be conserved in the face of agricultural expansion and human population growth. They reached the unequivocal - if controversial - conclusion that wildlife can be an economic asset, especially in the African savannas, if this wildlife can be sustainably utilized through safari hunting and tourism. Using the African savannas as an example, Wildlife Conservation by Sustainable Use shows that in many instances sustainable wildlife utilization comprises an even better form of land use than livestock keeping. Even when population pressure is high, as in agricultural areas or in humid zones, and wild animal species can pose a serious cost to agriculture, these costs are mainly caused by small species with a low potential for safari hunting. Although ranching has a very low rate of return and is hardly ever profitable, the biggest obstacle to the model of sustainable wildlife use outlined in Wildlife Conservation by Sustainable Use is from unfair competition from the agricultural sector, such as subsidies and lack of taxation, resulting in market distortion for wildlife utilization. This book thus gives valuable evidence for a different way of working, providing arguments for removing such distortions and thereby facilitating financially sound land use and making it a rationally sound choice to conserve wildlife outside protected areas. The expert team of authors, most of whom came together at a workshop to thrash out the ideas that were then developed into the various chapters, has written

a superb account of recent research on this complex subject, resulting in a book that is a major contribution to our understanding of sustainable use of land. The important conclusion is that wildlife conservation can be possible for landholders and local communities if they have a financial interest in protecting wildlife on their lands.

**Mixed-Species Groups of Animals** Eben Goodale, Guy Beauchamp, Graeme D. Ruxton, 2017-04-26 Mixed-Species Groups of Animals: Behavior, Community Structure, and Conservation presents a comprehensive discussion on the mixed-species groups of animals, a spectacular and accessible example of the complexity of species interactions. They are found in a wide range of animals, including invertebrates, fish, mammals and birds, and in different habitats, both terrestrial and aquatic, throughout the world. While there are more than 500 articles on this subject scattered in separate categories of journals, there has yet to be a general, cross-taxa book-length introduction to this subject that summarizes the behavior and community structure of these groups. The authors first survey the diversity of spatial associations among animals and then concentrate on moving groups. They review the major classes of theories that have been developed to explain their presence, particularly in how groups increase foraging efficiency and decrease predation. Finally, they explore the intricacies of species interactions, such as communication, that explain species roles in groups and discuss what implications these social systems have for conservation. Functions as a single resource for readers inside and outside of academia on mixed-species groups, serving as a foundation for future research in this field Begins with an empirical summary of mixed-species distribution and reviews how the theories explaining their adaptive benefits are supported by the evidence Includes

many aspects of mixed-group behavior (e.g. foraging, communication, collective decision-making, dominance, social roles of species and leadership, relationship to conservation) that were not previously or easily accessible

### **The Kingdon Field Guide to African Mammals**

Jonathan Kingdon, 2015-04-23 Jonathan Kingdon, one of the world's foremost authorities on African mammals, has both written and illustrated this landmark field guide. The unique combination of his extensive field experience and artistic talent has produced a stunning work that sets new standards. The concise text provides full information on identification, distribution, ecology, relationships and conservation status, with introductory profiles that summarise the characteristics of each mammal group. All known species of African land mammal are covered, with coverage of several of the more complex groups of small mammals simplified by reference to genera. Classification has been fully updated and this new edition includes many newly recognised species. With over 780 colour illustrations, numerous line drawings and more than 520 maps, this book will be an essential companion to anyone visiting Africa or with an interest in the mammals of the continent. Competition note: There are regional mammal books covering southern Africa, for example, but none that covers the whole continent in a portable format. The smaller-format and more concise Kingdon Pocket Guide to African Mammals may be more appealing to a more general safari market, but is much less comprehensive and more out of date.

Index-catalogue of Medical and Veterinary Zoology, 1981

*Mammals of Africa: Volume VI* Jonathan Kingdon, 2014-11-20 Mammals of Africa (MoA) is a series of six volumes which describes, in detail, every currently

recognized species of African land mammal. This is the first time that such extensive coverage has ever been attempted, and the volumes incorporate the very latest information and detailed discussion of the morphology, distribution, biology and evolution (including reference to fossil and molecular data) of Africa's mammals. With more than 1,160 species and 16-18 orders, Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format, with detailed profiles of every species and higher taxa. The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned, as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Edited by Jonathan Kingdon, David Happold, Tom Butynski, Mike Hoffmann, Meredith Happold and Jan Kalina, and written by more than 350 authors, all experts in their fields, *Mammals of Africa* is as comprehensive a compendium of current knowledge as is possible. Extensive references alert readers to more detailed information. Volume VI, edited by Jonathan Kingdon and Michael Hoffmann, comprises a single order, currently subdivided into three suborders, containing the hippopotamuses, pigs, chevrotains, deer, Giraffe, Okapi, buffalos, spiral-horned antelopes, dwarf antelopes, duikers, grysboks, Beira, dik-diks, gazelles, Klipspringer, Oribi, reduncines, Impala, alcelaphines, horse-like antelopes, sheep and goats; the volume contains 98 species profiles.
