Interdisciplinary Applications of Kinematics Andrés Kecskeméthy,Francisco Geu Flores,Eliodoro Carrera,Dante A. Elias,2019-05-16 This is the proceedings of the Third Conference on Interdisciplinary Applications of Kinematics (IAK 2018) held in Lima, Peru, March 5–7, 2018. The conference brought together scientists from several research fields, such as computational kinematics, multibody systems, industrial machines, robotics, biomechanics, mechatronics, computational chemistry, and vibration analysis, and embraced all key aspects of kinematics, namely, theoretical methods, modeling, optimization, experimental validation, industrial applications, and design. Kinematics is an exciting area of computational mechanics and plays a central role in a great variety of fields and industrial applications nowadays. Apart from research in pure kinematics, the field deals with problems of practical relevance that need to be solved in an interdisciplinary manner in order for new technologies to develop. The results presented in this book should be of interest for practicing and research engineers as well as Ph.D. students from the fields of mechanical and electrical engineering, computer science, and computer graphics.

Three-dimensional Portrayal of Aircraft Instrument Approach Procedures Duane O. Main,1965 The report discusses the development of an improved manner of portraying instrument approach and landing (AL) procedures through the use of a modified three-dimensional (3-D) charting technique. Previous AL charting development efforts as well as the geometric projection and photographic techniques considered are described. Analysis of instrument procedures formed the basis for the concept of using pre-drawn symbols for chart compilation which is explained in detail. The Navy and Air Force approaches to 3-D development are compared and discussed with the aid of sample graphics. The report concludes that 3-D approach and landing charts have been operationally evaluated to be a significant improvement and can be produced at a cost saving. (Author).

Comparison of Aircraft Controls for Prone and Seated Position in Three-dimensional Pursuit Task Clarence W. Brown,Edwin Ernest Ghiselli,Rheem F. Jarrett,Edward W. Minium,Robert M. U'Ren,1949 One hundred and eleven university students were divided into four groups. Each group was tested on the same psycho-motor pursuit task but utilized different controls. Two of the groups operated their controls from the seated position, and two from the prone position. One of the seated groups used the

conventional stick and rudder controls, and the second seated group together with one of the prone--position groups employed a three--dimensional hand control. The second prone--position group used the Amptmann three--dimensional control. The results indicated that for either of the positions, seated or prone, the type of control utilized made little or no difference as far as performance on the pursuit task was concerned. However, performance in the prone position was found to be significantly inferior to that in the seated position. The indications are, therefore, that for this kind of task the type of control is relatively unimportant but the position of the pilot's body may be a prime consideration.--Abstract.

Air-Mech-Strike BG (R) David L. Grange, BG (R) Huba Wass de Czege, LTC Richard D. Liebert USAR, Major Charles A. Jarnot, Major Al Huber, LT Mike Sparks, 2002-01-01 This book outlines how to reorganize the U.S. Army into a fully 2 and 3-Dimensional maneuver capable, ground force with terrain-agile, armored fighting vehicles sized to rapidly deploy by fixed-wing and rotary-wing aircraft to the scene of world conflicts and strike at the heart of freedom's enemies. The plan to build the Army into Air-Mech-Strike Forces, exploiting emerging information-age technologies, as well as America's supremacy in aircraft and helicopter delivery systems--at the lowest cost to the taxpayers, is described in detail. These Army warfighting organizations, using existing and some newly purchased equipment, will shape the battlefield to America's advantage, preserving the peace before it is lost; if not, then winning fights that must be fought quickly. The dangerous world we live in moves by the speed of the AIR, and the 21st Century U.S. Army 2D/3D combat team will dominate this medium by Air-Mech-Strike!
