The TIROS II Radiation Experiment R. A. Hanel,W. G. Stroud,1961 The TIROS II meteorological satellite was placed into orbit on November 23, 1960. It contains two television cameras and equipment for a family of electromagnetic radiation experiments, including a medium resolution radiometer. The medium resolution radiometer is a cluster of five sensors which have their optical axes inclined 45 degrees to the spin axis of the satellite. The spin of TIROS II provides the scanning motion. The five radiometer channels are sensitive to the following spectral bands: 6 to 6.5; 8 to 12; 0.2 to 6; 8 to 30; and 0.55 to 0.75 microns. (Author).
Final Report on the TIROS I Meteorological Satellite System Goddard Space Flight Center,1962 This report is divided into two parts: Part I includes the design, development, operation, and engineering evaluation of Tiros I; Part II is concerned with the meteorological uses of the television data. The developments leading to the design of the Tiros I meteorological satellite, the technical design and development of the Tiros I spacecraft and its instruments, the details of launch, tracking, and data acquisition, and an engineering evaluation of the satellite system and its instrumentation are described in detail in Chapters 1-7. The uses of the television pictures from Tiros I are discussed in a series of 11 articles (Chapters 8-18) by the staff members of the U.S. Weather Bureau, Meteorological Satellite Laboratories. Methods for using cloud pictures to identify synoptic scale and mesoscale phenomena and limited detection of wind patterns are described in case studies. Appendix A shows some of the basic photogrammetry used to locate geographically the cloud features in the television pictures.
Northern Hemisphere Cloud Cover for Selected Late Fall Seasons Using TIROS Nephanalyses Philip F. Clapp,1968 Northern Hemisphere fields of mean cloudiness were constructed using TIROS nephanalyses for the late-fall seasons (Oct. to Dec.) of 3 years, 1962-64. These may be useful in studies of cloud climatology and year-to-year variations of the earth-atmosphere heat budget; and for designing and testing cloud-modeling procedures in numerical experiments. Shortcomings were revealed in the present subjective nephanalysis documentation which hopefully will soon be corrected by the promising work now going on in digitizing the video pictures.
