The Composition of Video Games Johansen Quijano,2019-10-11 Video games are a complex, compelling medium in which established art forms intersect with technology to create an interactive text. Visual arts, architectural design, music, narrative and rules of play all find a place within, and are constrained by, computer systems whose purpose is to create an immersive player experience. In the relatively short life of video game studies, many authors have approached the question of how games function, some focusing on technical aspects of game design, others on rules of play. Taking a holistic view, this study explores how ludology, narratology, visual rhetoric, musical theory and player psychology work (or don't work) together to create a cohesive experience and to provide a unified framework for understanding video games.

It was an adventure of a lifetime, leading them across hundreds of miles and deep into an enchanting but dangerous winter wonderland. At the heart of the amazing journey was the extraordinary relationship they shared, one that blurred the line between man and dog. *Following Atticus* is an unforgettable true saga of adventure, friendship, and the unlikeliest of family, as one remarkable animal opens the eyes and heart of a tough-as-nails newspaperman to the world's beauty and its possibilities.

Traveling through Video Games Tom van Nuenen, 2023-10-25 This book unlocks an understanding of video games as virtual travel. It explains how video game design increasingly takes cues from the promotional language of tourism, and how this connection raises issues of power and commodification. Bridging the disciplinary gap between game and tourism studies, the book offers a

comprehensive account of touristic gazing in games such as The Legend of Zelda: Breath of the Wild, Minecraft, and Microsoft Flight Simulator 2020. Traveling through video games involves a mythological promise of open-ended opportunity, summarized in the slogan you can go there. Van Nuenen discusses the scale of game worlds, the elusive nature of freedom and control, and the pivotal role of work in creating a sense of belonging. The logic of tourism is fundamentally consumptive—but through design choices, players can also be invited to approach their travels more critically. This is the difference between moving through a game world, and being moved by it. This interdisciplinary and innovative study will interest students and scholars of digital media studies, game studies, tourism and technology, and the Digital Humanities.

Persuasive Games Ian Bogost, 2010-08-13 An exploration of the way videogames mount arguments and make expressive statements about the world that analyzes their unique persuasive power in terms of their computational properties. Videogames are an expressive medium, and a persuasive medium; they represent how real and imagined systems work, and they invite players to interact with those systems and form judgments about them. In this innovative analysis, Ian Bogost examines the way videogames mount arguments and influence players. Drawing on the 2,500-year history of rhetoric, the study of persuasive expression, Bogost analyzes rhetoric's unique function in software in general and videogames in particular. The field of media studies already analyzes visual rhetoric, the art of using imagery and visual representation

persuasively. Bogost argues that videogames, thanks to their basic representational mode of procedurality (rule-based representations and interactions), open a new domain for persuasion; they realize a new form of rhetoric. Bogost calls this new form procedural rhetoric, a type of rhetoric tied to the core affordances of computers: running processes and executing rule-based symbolic manipulation. He argues further that videogames have a unique persuasive power that goes beyond other forms of computational persuasion. Not only can videogames support existing social and cultural positions, but they can also disrupt and change these positions themselves, leading to potentially significant long-term social change. Bogost looks at three areas in which videogame persuasion has already taken form and shows considerable potential: politics, advertising, and learning.
