Trabant, the final days of production Martin Roemers,2007

Trabant Trek Dan Murdoch,2011-06-07 Cambodia is a long way from Germany - thousands of miles, as it turns out. And in between are some of the world's highest mountains, most inhospitable deserts and least welcoming countries. Trying to make the journey overland was always going to be difficult. But one group of twenty-somethings, bored with the predictable wanderings of the backpacker generation, thought they'd spice things up a little. They would go by car. The worst car in the world. The infamous Soviet-era Trabant. This would be no whimsical meander across the globe, but a mission with a cause—to raise money for the Cambodian children they had met on previous visits to the country. From their base in Central Europe, east through Turkey and the gateway to Asia, then into the Caucasus, the five men and three women ferried across the Caspian Sea and into the forgotten world of Central Asia, the police state of Turkmenistan, the beautiful Silk Road cities of Uzbekistan, the stunning mountain passes of Tajikistan and Kyrgyzstan and the endless flat of the Kazakh steppe. They took on Russia's freezing Siberian winter and Mongolia's icy plains, crossed booming China before hitting the sun-speckled hills of Laos and the jungles of Cambodia. This book, based on the explosive blog from award-winning travel writer and journalist Dan Murdoch, tells the inside story of the Trabant Trek, and how a group of near strangers coped with the challenge of their lives. Ten percent of the royalties will be donated to the Trabant Trek charities.

Duroplast in Pastell Colours: the Trabant ,1997

Lizcohenbodywork Liz Cohen,2006 This instantly collectible limited edition artist's book, featuring rounded edges and nine blown-in, four-color photographic images, documents a recent project by the daring and witty young American artist, Liz Cohen. In 2002, the artist began the process of importing the Trabant, once the most common car in East Germany, to the United States. Upon their arrival, Cohen set to work converting these Communist-era workhorses into supped-up hybrid American El Caminos. Black-and-white photographs and the artist's notes explain the process, and the glossy, blown-in photographs show the scantily clad, stiletto-shod artist posing in typical calendar-shot, car-model form on top of and alongside her works in progress, sometimes accompanied by the real-life mechanics who helped her to reach her dream.

Cars with 2-Stroke Engines Mark Telford,2018-11-21 This book covers what I consider to be the best cars (& vans) with 2-Stroke engines that were made by conventional car makers. The marques covered are D.K.W, Saab, Subaru, Suzuki, Wartburg, Trabant, I.F.A, Framo, Barkas, F.S.O, Lloyd, Goliath, Goggomobil and Melkus. I have tried to stick to cars with enough room for a small family as well as small commercial vehicles. This means I didn't include very many microcars. I had to draw the line somewhere! 2-Stroke cars were made from 1928 to 1990 and the book is a celebration of a bygone era when cars were a lot simpler and easier to maintain. The book covers the history, specifications, road tests, model changes, buyers guides, period adverts, prototypes and often the political climate that was prevalent at the time. It is not meant to be a workshop manual.It includes my own experiences buying and owning a number of these cars and the stories are told in a light-hearted and conversational style. 2-Stroke cars today make a highly entertaining choice of classic car that's somewhat different from more mainstream choices. Some are still very affordable too.Formerly published as Two Stroke Cars Of The Past in 2012, the book has been edited, proof-read, revised and has had a new layout in November 2018. What used to be an A4 size book has been resized to 6x9 which is large paperback size. It now has 464 pages. This has reduced the printing costs, so the book is now cheaper to buy. It is also available on Kindle at half the price of the printed book. The only difference in the two is that the Kindle version has a mixture of both colour and black and white photos and the printed copy has only black & white due to the high cost of colour printing. Early criticisms of the original book largely concerned typos, and bad layout. These issues have been addressed and the whole book has had a thorough going over. I hope you enjoy it!

Car Wars Jonathan Mantle,1995 Ferdinand Porsche, widely revered as the inventor of the VW Beetle, stole the plans for the people's car from a Czech designer with Hitler's help. General Motors manufactured jet engines for Hitler's army, then got \$33 million in tax exemptions from the U.S. government for damages sustained by Allied bombing of its German factories. Packed with these and other tales of greed and treachery, Car Wars is a must-read lesson in industrial strategy and a fascinating, behind-the-scenes history of the world's best-known automobiles.

Vico's New Science of Ancient Signs Jürgen Trabant,2021-04-29 Jürgen Trabant reads the profound insights into human semiosis contained in Vico's 'sematology' as both a spirited rejection of Cartesian philosophy and an early critique of enlightened logocentrism. Sean Ward's translation makes this work available to an English-reading audience for the first time.

Communicating Mobility and Technology Ehren Helmut Pflugfelder,2016-07-07 Winner of the 2018 CCCC Technical and Scientific Communication Award in the category of Best Book in Technical or Scientific Communication Responding to the effects of human mobility and crises such as depleting oil supplies, Ehren Helmut Pflugfelder turns specifically to automobility, a term used to describe the kinds of mobility afforded by autonomous, automobile-based movement technologies and their ramifications. Thus far, few studies in technical communication have explored the development of mobility technologies, the immense power that highly structured, environmentally significant systems have in the world, or the human-machine interactions that take place in such activities. Applying kinaesthetic rhetoric, a rhetoric that is sensitive to and developed from the mobile, material context of these technologies, Pflugfelder looks at transportation projects such as electric taxi cabs from the turn of the century to modern day, open-source vehicle projects, and a large case study of an autonomous, electric pod car network that ultimately failed. Kinaesthetic rhetoric illuminates how mobility technologies have always been persuasive wherever and whenever linguistic symbol systems and material interactions enroll us, often unconsciously, into regimes of movement and ways of experiencing the world. As Pflugfelder shows, mobility technologies involve networks of sustained arguments that are as durable as the bonds between the actors in their networks.
