The American Railroad Passenger Car John H. White,1985 The American Railroad Passenger Car recaptures the lost, but not-too-distant past when 98 percent of all intercity travel in the United States was by rail. It documents in extraordinary detail the ingenuity and splendor of the classic trains as well as the rattle and clatter, the dust and cinders of early rail travel. With clarity and precision, White explains the methods of construction of wood, iron, steel, and aluminum cars. He traces the evolution of wheels and brakes, dining cars and sleeping compartments. And he follows the revolutions in taste and technology that dramatically altered the appearance of the railroad passenger car over the century and a half that it dominated American travel. Detailed plans and diagrams accompanying the text make it possible for model-builders to reconstruct many famous passenger cars themselves.

**American Passenger Trains and Locomotives Illustrated** Mark Wegman,2008-11-15 The period from the 1890s to the mid-1950s is generally considered the “golden era” of passenger rail travel in America. It was a time of celebrated locomotives and luxurious passenger service, a time when rail technology saw its greatest advances and railroads became the nation’s favored mode of transportation. These glory years come alive in American Passenger Trains and Locomotives Illustrated, 1889–1971. For this volume, author and illustrator Mark Wegman has researched original railroad drawings and in some cases even paint chips to render more than 160 profiles, front and top views, and interior layouts depicting the steam, diesel, and electric locomotives, along with passenger cars, of three dozen of the nation’s most celebrated trains of the golden age. Accompanying the author’s drawings are histories of each train, period photographs, postcards, menus, luggage stickers, vintage print ads, and detailed captions. The book is a lavishly appointed journey back in time to the bygone heyday of passenger-train travel.

Mystery of the Sunken Train Car Jeremy Biesecker,2022-04-19 When strange things happen, even your best friends may never believe you. Travis Mortley learns this the hard way when he is injured and nearly killed by a mysterious train car rolling down a mountain into lake Wiloko. Like searching for a needle in a sea of haystacks, Travis sets out on a mission to try to find the train car and figure out what happened. Going up the mountain to investigate is out of the question, until his friend Diane decides to go herself. Travis must face his fear as he helps her on a mission that could cost them their lives.

Train Chris Oxlade,1998 Using an electric express train as an example, describes the different parts and cars of a train and how they work, including the wheels, suspension, cab, controls, carriages, buffet car, and freight wagons.

*The Electric Pullman* Lawrence A. Brough,2013-04-18 A history of the Ohio railroad car and equipment company and its 16-year run. Entering an already crowded and established industry, the Niles Car & Manufacturing Company in Ohio began business with surprising success, producing well over 1,000 electric and steam railway cars—cars so durable they rarely needed to be replaced. That durability essentially put the company out of business, and it vanished from the scene as quickly as it had appeared, leaving little behind except its sturdy railway cars. The story of this highly regarded company spans just 16 years, from Niles’s incorporation in 1901 to the abandonment of railway car production and sale of the property to a firm that would briefly build engine parts during World War I. Including unpublished photographs and rosters of railway cars produced by the company and still in existence in railroad museums, *The Electric Pullman* will appeal to railroad enthusiasts everywhere. Praise for *The Electric Pullman* “Required reading for anyone interested in interurban history. It holds additional appeal for those interested in Ohio history or the junction point between business, society, and technology.” –*Lexington Quarterly* “Although not one of the major manufacturers in its field, the Niles company produced some notable and well-remembered equipment during the height of the electric interurban railway era. Indeed, among some interurban railway historians, Niles cars are sacred objects. As such, its story deserves to be told and theoretically would be a logical complement to IUP’s books on the Brill and Jewett companies. Brough himself is a serious historian who knows his subject and has clearly mined all the sources that seem to exist.” –Herbert H. Harwood, Jr., author of *The Railroad that Never Was* and *The New York, Westchester & Boston Railway*

**Baltimore & Ohio's Capitol Limited and National Limited** Joe Welsh, In 1923 the Baltimore & Ohio's Capitol Limited started its travels between Baltimore, Washington, D.C., and Chicago. Two years later the B&O's National Limited linked the nations capital to St. Louis. Almost at once the two lines became household names, famous for the outstanding service and cuisine offered in their Pullman sleepers and renowned dining cars. This authoritative, illustrated history takes readers back to the B&O's glory years, with a wealth of images, route information, details of the trains passenger motive power, and the inside story on the frugal railroads means of streamlining its equipment with innovative and aesthetically striking results. Against a backdrop of dozens of black-and-white archival images and period color photos depicting uniforms, dinnerware, stations, period ads and route maps, and interior views of passenger cars, award-winning rail author Joe Welsh discusses how B&O passenger operations led to the demise of at least one of its rival Pennsylvania Railroads passenger trains; and how, ultimately, market forces did in the B&O's passenger trains as well. Here is the whole story, with the National Limited's failure under Amtrak's auspices--and the 1981 rebirth of the Capitol Limited as one of Amtrak's most popular trains, keeping a legend alive.

*Trains and Technology: Cars* Anthony J. Bianculli,2001 Volume 2 of 'Trains and Technology' is devoted to railroad cars of nineteenth-century America. Since the

variety of cars used during the nineteenth century was huge, the book is divided into three sections- passenger, freight, and non-revenue cars. The easily understood, jargon-free discussions and explanations throughout the book are accompanied by over 225 illustrations and accurate scale drawings of the various equipment.

**Auto-Train** Wally Ely,2009 Although most Americans have heard of the Auto Train, many have uncertain ideas regarding what it is and where it operates. The longest passenger train in the world provides a luxury auto-ferry service between Lorton, Virginia, and Sanford, Florida. The original Auto-Train Corporation, founded by Dr. Eugene Garfield, struggled financially in spite of its immense popularity. The company faced numerous crises, including financial setbacks and equipment problems due to damages that occurred during several derailments, which led to the corporation's demise in 1981. Although the corporation sold off its corporate assets, the concept was revived when Amtrak added the Auto Train service to its East Coast schedule. *Images of Rail: Auto-Train* presents photographs from the early operations to today, including pictures from the Amtrak era.

**Dynamic Responses of Railroad Car Models to Vertical and Lateral Rail Inputs** John L. Sewall,Russell V. Parrish,Barbara J. Durling,1971 Simplified dynamic models were applied in a study of vibration in a high-speed railroad car. The mathematical models used were a four-degree-of-freedom model for vertical responses to vertical rail inputs and a ten-degree-of-freedom model for lateral response to lateral or rolling (cross-level) inputs from the rails. Elastic properties of the passenger car body were represented by bending and torsion of a uniform beam. Rail-to-car (truck) suspensions were modeled as spring-mass-dashpot oscillators. Lateral spring nonlinearities approximating certain complicated truck mechanisms were introduced. The models were excited by displacement and, in some cases, velocity inputs from the rails by both deterministic (including sinusoidal) and random input functions. Results were obtained both in the frequency and time domains. Solutions in the time domain for the lateral model were obtained for a wide variety of transient and random inputs generated on-line by an analog computer. Variations in one of the damping properties of the lateral car suspension gave large fluctuations in response over a range of car speeds for a given input. This damping coefficient was significant in reducing lateral car responses that were higher for nonlinear springs for three different inputs.

The Story of the Pullman Car (Classic Reprint) Joseph Husband,2017-09-12 Excerpt from The Story of the Pullman Car The elementary principle still remains. The Wheel and the paved way of Roman days correspond to the four-tracked route of level rails and the pon derons steel wheels of the mighty Mogul of today. In speed, scope, capacity, and comfort has the change been wrought. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
