The Rebirth of the Russian Space Program Brian Harvey, 2007-11-25 This, fifty years after Sputnik, is the definitive book on the Russian space program. The author covers all the key elements of the current Russian space program, including both manned and unmanned missions. He examines the various types of unmanned applications programs as well as the crucial military program, and even analyzes the infrastructure of production, launch centres and tracking. You'll also find discussion of the commercialization of the program and its relationship with western companies. Russia's current space experiment is also put in a comparative global context. Strong emphasis is placed on Russia's future space intentions and on new programs and missions in prospect.

Russia in Space Brian Harvey, 2000-12-21 Until the Apollo-Soyuz flight of 1972, the Russian Space Program was shrouded in such complete secrecy that only rumors of failures (or catastrophes) reached the West. This comprehensive history of the Russian Space Program, from its Sputnik origins to the privatized Mir Space Station, addresses the technical, political, historical, human, and organizational issues and provides a balanced focus on the manned and unmanned programs. It is the first book to assess the Russian Space Program including the 10-year period since the fall of communism.

The Complete Book of Spaceflight David Darling, 2008-04-21 A commanding encyclopedia of the history and principles of spaceflight-from earliest conceptions to faster-than-light galaxy-hopping Here is the first truly comprehensive guide to space exploration and propulsion, from the first musings of the Greeks to current scientific speculation about interstellar travel using warp drives and wormholes. Space buffs will delight in its in-depth coverage of all key manned and unmanned missions and space vehicles-past, present, and projected-and its clear explanations of the technologies involved. Over the course of more than 2,000 extensively cross-referenced entries, astronomer David Darling also provides fascinating insights into the cultural development of spaceflight. In vivid accounts of the major characters and historical events involved, he provides fascinating tales of early innovators, the cross-pollination that has long existed between science fiction and science fact, and the sometimes obscure links between geopolitics, warfare, and advances in rocketry.

Jane's Space Directory David Baker, 2004-06-21 Profiling hundreds of space programmes and their different technologies, Jane's Space Directory enables you to identify thousands of different commercial and defence applications. Key objectives, developments and technical specifications of available vehicles and systems are reviewed, including the new generation of launch vehicles. Structured around the categorisation of functions and presented for quick comparison and evaluation, each entry comes with accompanying illustrations. Supplier and manufacturer listings help support your market research and procurement requirements. Key content includes: Government and non-government space programmes; Global space industry directory; Civilian operations; Orbital and suborbital launch vehicles; Propulsion; Commercial and military satellites; Planetary and space science; Human space flight; Launch listings; Contractors. For a complete listing of aerospace organisations and personnel around the globe see Jane's International ABC Aerospace Directory.

Observation of the Earth and Its Environment Herbert J. Kramer, 2019-01-30 This book is about spaceborne missions and instruments. In addition, surveys of airborne missions and of campaigns can be found on the accompanying CD-ROM in pdf-format. Compared with the 3rd edition the spaceborne part grew from about 300 to 1000 pages. The complete text - including the electronic-only chapters - contains more than 1900 pages. New chapters treat the history of Earth observation and university missions. The number of commercial Earth imaging missions has grown significantly. A chapter contains reference data and definitions. Extensive appendices provide a comprehensive glossary, acronyms and abbreviations and an index of sensors. An effort has been made to present the information in context, to point out relationships and interconnections. The book may serve as a reference and guide to all involved in the various national and international space programs: researchers and managers, service providers and data users, teachers and students.

Space Microelectronics Volume 1: Modern Spacecraft Classification, Failure, and Electrical Component Requirements Anatoly Belous, Vitali Saladukha, Siarhei Shvedau, 2017-06-30 This authoritative first volume provides a solid understanding of modern spacecraft classification, failure, and electrical component requirements. This book focuses on the study of modern spacecraft, including their classification, packaging and protection, design versions, launch failure and accident analysis, and the main requirements of electronic components used. Readers find comprehensive coverage of the design and development of individual components as well as systems, their packaging, and how to make them last in space. This is a useful resource for military and civil applications. Specific topics include: The manufacturing of electronics for space; The main physical mechanisms of the impact of destabilizing factors of outer space, including various kinds of radiation, high-energy galactic ions, and particles of cosmic dust; The design of advanced space-grade microelectronic products such as memory microcircuits, microprocessors, interface and logic of microcircuits and power control microcircuits; Facts and features about the "space race" that have not been available until now.

Non-Proliferation Incentives for Russia and Ukraine John C Baker, 2013-09-13 Given their protracted economic difficulties, the nuclear and aerospace industries in Russia and Ukraine are tempted to export dual-use technologies that can contribute to the proliferation of weapons of mass destruction and missile systems. John C. Baker proposes using international incentives to discourage irresponsible export behaviour while seeking long-term changes in the non-proliferation attitudes of their managers and government leaders.

Smaller Satellites: Bigger Business? Michael J Rycroft, Norma Crosby, 2013-06-29 Y. Fujimori, Symposium Programme Committee Chair, and Faculty Member, International Space University e-mail: fujimori@isu.isunet.edu M. Rycroft, Faculty Member, International Space University e-mail: rycroft@isu.isunet.edu N. Crosby, International Space University e-mail: norma@bock-crosby.fsbusines.co.uk For the sixth annual ISU Symposium the theme was Smaller Satellites: Bigger Business? Concepts, Applications and Markets for Micro/Nanosatellites in a New Information World. Thus, the Symposium addressed the crucial question: are small satellites the saviour of space programmes around the world It did this from the unique perspective of the International Space today? University - the interdisciplinary, international and intercultural perspective. This Symposium brought together a variety of people working on small satellites - engineers, scientists, planners, providers, operators, policy makers and business executives, together with representatives from regulatory bodies, from national and international organizations, and from the finance sector, and also entrepreneurs. Discussion and debate were encouraged, based on the papers presented and those published here.

Fusées et satellites de Youjnoe Christian Lardier, 2023-04-01 Le bureau d'étude OKB-586/Youjnoe de Dniepropetrovsk en Ukraine a développé un grand nombre de fusées militaires, de lanceurs spatiaux et de satellites, notamment des séries Cosmos et Intercosmos. Ce sont des milliers de fusées et satellites de Youjnoe qui ont été, pour la plupart, produits en série par l'usine n°586/YoujMach. Cette entreprise, créée en 1951, a fêté ses 70 ans en 2021. Elle a été dirigée de 1954 à 1971 par Mikhaïl Yangel qui fut un des trois grands constructeurs soviétiques de la technique fuséo-cosmique avec Sergueï Korolev et Vladimir Tchelomeï. Fusées et satellites de Youjnoe traite des différents programmes qui ont été réalisés pendant les 40 ans de la période soviétique liée à la course aux armements et à la course à l'espace entre les États-Unis et l'Union soviétique, puis pendant les 30 ans de la période ukrainienne caractérisée par la coopération avec l'Occident et l'ouverture de la commercialisation. L'ouvrage intègre les dernières informations issues des archives déclassifiées.

Space Technologies for the Benefit of Human Society and Earth Phillip Olla, 2009-03-18 Overview of Space Technology It has been over 50 years

since the rst satellite was sent into orbit, and the impact of space technology can be felt in many aspects in our day to day life. In addition to the convenience of knowing exactly where we are on the planet via GPS satellites; or deciding what to pack for a trip based on forecasts from weather satellites; watching CNNinaremotevillageviabroadcasting satellites;therearenowsomecrucialen- ronmental uses of Space technologies in the areas of natural resources management and environmental monitoring. Remotely sensed data reveals an unparallel view of the Earth for systems that require synoptic or periodic observations such as inv- tory control, surveying, agriculture, business, mineralogy, hydrography, geology, land mass cover, land utilization and environment monitoring. The advancement of remote sensing has made remote sensed data more affordable and available to merge with a variety of data sources to create mash-ups. The amalgamation of these data sources into disciplines such as agriculture, urban planning, web applications, cartography, geodetic reference systems, and global navigation satellite systems, are an important advancement of space applications and space science. Space Technology and Millennium Development Goals (MDGs) The MDGs are a set of time-bound, measurable goals and targets that are global as well as country-speci c for combating poverty, hunger, diseases, illiteracy, enviro- mental degradation and discrimination against women.

Libration Point Orbits and Applications Gerard G mez,Martin Wen-Yu Lo,Josep J. Masdemont,2003 This book presents the state of the art in numerical and analytical techniques as well as future trends associated with mission design for libration point orbits. It contains papers explaining theoretical developments and their applications, including the accurate description of some actual libration point missions of ESA and NASA. The existing software in the field and some applications beyond the neighborhood of the Earth are also presented. Special emphasis is placed on the use of dynamical systems methodology in the libration-point-orbits mission design.

The Soyuz Launch Vehicle Christian Lardier,Stefan Barensky,2013-03-12 “The Soyuz Launch Vehicle” tells the story, for the first time in a single English-language book, of the extremely successful Soyuz launch vehicle. Built as the world’s first intercontinental ballistic missile (ICBM), Soyuz was adapted to launch not only Sputnik but also the first man to orbit Earth, and has been in service for over fifty years in a variety of forms. It has launched all Soviet manned spacecraft and is now the only means of reaching the International Space Station. It was also the workhorse for launching satellites and space probes and has recently been given a second life in French Guiana, fulfilling a commercial role in a joint venture with France. No other launch vehicle has had such a long and illustrious history. This remarkable book gives a complete and accurate description of the two lives of Soyuz, chronicling the recent cooperative space endeavors of Europe and Russia. The book is presented in two parts: Christian Lardier chronicles the “first life” in Russia while Stefan Barensky explores its “second life,” covering Starsem, the Franco-Russian company and implementation of technology for the French Guiana Space Agency by ESA. Part One has been developed from Russian sources, providing a descriptive approach to very technical issues. The second part of the book tells the contemporary story of the second life of Soyuz, gathered from Western sources and interviews with key protagonists. “The Soyuz Launch Vehicle” is a detailed description of a formidable human adventure, with its political, technical, and commercial ramifications. At a time when a new order was taking shape in the space sector, the players being the United States, Russia, Europe and Asia, and when economic difficulties sometimes made it tempting to give up, this book reminds us that in the global sector, nothing is impossible.
