Tupolev Paul Duffy,A. I. Kandalov,1996 This book focuses on the aircraft designs of the man often referred to as the father of Russian aviation, Andrei Nikolaevich Tupolev. Born in Russia in 1888, Tupolev went on to design aircraft that earned Russia worldwide acclaim for their contributions to aviation in the 1920s, '30s, and '40s.

Tupolev TU-22 Sergey Burdin,2005-11-17 This historic Russian aircraft was first delivered to the Soviet Air Force at the height of the Cold War in 1961. It remained in service until replaced by the much modified Tu-22M Backfire which was introduced in the early 1970s and still remains in service. It was the first Soviet supersonic bomber and was used for reconnaissance and bombing, in the latter role carrying either conventional or nuclear bombs. The early aircraft had a range of 1,800 miles but later models had a much increased radius of action through the introduction of in-flight refuelling. This book looks at the design and development of the aircraft up to the introduction of the type M Backfire. Details of construction, weapon systems, photo-reconnaissance and jamming equipment are included to cover the several variant models. Operational use is explained and the text includes many first-hand accounts from Russian aircrew of the period. The book will be superbly illustrated by unique official photographs and manuals.

Hydrogen Aircraft Technology G.Daniel Brewer,2017-11-22 Liquid hydrogen is shown to be the ideal fuel for civil transport aircraft, as well as for many types of military aircraft. Hydrogen Aircraft Technology discusses the

potential of hydrogen for subsonic, supersonic, and hypersonic applications. Designs with sample configurations of aircraft for all three speed categories are presented, in addition to performance comparisons to equivalent designs for aircraft using conventional kerosine-type fuel and configurations for aircraft using liquid methane fuel. Other topics discussed include conceptual designs of the principal elements of fuel containment systems required for cryogenic fuels, operational elements (e.g., pumps, valves, pressure regulators, heat exchangers, lines and fittings), modifications for turbine engines to maximize the benefit of hydrogen, safety aspects compared to kerosine and methane fueled designs, equipment and facility designs for servicing hydrogen-fueled aircraft, production methods for liquid hydrogen, and the environmental advantages for using liquid hydrogen. The book also presents a plan for conducting the necessary development of technology and introducing hydrogen fuel into the worldwide civil air transport industry. Hydrogen Aircraft Technology will provide fascinating reading for anyone interested in aircraft and hydrogen fuel designs.

Encyclopedia of African Airlines Ben R. Guttery, 1998 The rainy season, terrain, and financial hardships have made the construction of highways and railroads nearly impossible in many parts of Africa. This lack of modern infrastructure has been overcome in some part by the development of air transportation. Hundreds of carriers--both small and large, government owned and private--have connected all parts of the continent. Together, they have had a tremendous impact on the African economy and the people. Country-by-country, this comprehensive reference work provides brief histories of over 700 airlines in 54 African nations. Each entry has the years of operation of the carrier, along with information on its origin, growth, and route

structure. Aircraft usage, including registration numbers and nicknames, is covered in many cases. Any crashes involving aircraft in the carrier's fleet are also noted. An appendix gives the location of all major African airports.

Tupolev Tu-144 E. Gordon, Yefim Gordon, Dmitriy Komissarov, Vladimir Rigmant,2015 Developed in the 1960s/1970s, the Tu-144 was the Soviet Union's only practical venture into supersonic commercial aviation. Though its career was all too brief, it was a major technological achievement for the Soviet aircraft industry. The book provides in-depth coverage of the Concorde, including projected versions, the Tu-144's production and service history, and a comparison with the Concorde. First flown on the last day of 1968 ahead of the Concorde the Tu-144 had to undergo a long gestation period before the production version entered service in November 1977. Unfortunately, its career proved to be brief; two accidents and a powerful anti-Tu-144 lobby caused the type to be withdrawn in May 1978. The book describes the Tu-144's versions (including the Tu-144LL research aircraft developed under a Russian-U.S. program) and touches on the projected military derivatives. It is illustrated with color side views and previously unpublished photographs. -- Publisher marketing.

Tupolev Tu-134 Dmitrii Komissarov,2004 8 1/2 x 11, 260 color & b&w photos, The Tu-134, which has given sterling service for 35 years now, has played a

major role in Soviet/Russian civil aviation. It was the first jet type operated the flag carriers of several nations allied with the Soviet Union. The Tu-134 has seen service in 42 countries in Europe, Southeast Asia, the Middle East, Africa and South America. Apart from passenger flights, its multifarious activities include VIP transportation, support of Air Force, Army and Navy headquarters and miscellaneous research and test work. The type has helped train thousands of military pilots and navigators for the Soviet Air Forces' tactical and long-range bomber components. Compiled from first-hand Russian sources, the book gives an account of the Tu-134 and the type's design, test and operational history. Every known version, including military and various test aircraft, is painstakingly described here. Detailed fleet lists are given of all known Tu-134 operators. The book features a full production list of more than 800 aircraft and accident details.

Tupolev Paul Duffy, A. I. Kandalov, 1996 The international political scene has, for many decades, precluded attempts to create a serious historical evaluation of Russian aircraft and their manufacturers. In recent years the situation has become far more relaxed, and access to records has been opened to Western researchers - a development from which this book greatly benefits.

Red Devils over the Yalu Igor Seidov, Stuart Britton, 2014-03-19 The Korean War (1950-1953) was the first - and only - full-scale air war in the jet age. It was in the skies of North Korea where Soviet and American pilots came together in fierce aerial clashes. The best pilots of the opposing systems, the most powerful air forces, and the most up-to-date aircraft in the world in this period of history came together in pitched air battles. The analysis of the air war showed that the powerful United States Air Force and its

allies were unable to achieve complete superiority in the air and were unable to fulfill all the tasks they'd been given. Soviet pilots and Soviet jet fighters, which were in no way inferior to their opponents and in certain respects were even superior to them, was the reason for this. The combat experience and new tactical aerial combat tactics, which were tested for the first time in the skies of Korea, have been eagerly studied and applied by modern air forces around the world today. This book fully discusses the Soviet participation in the Korean War and presents a view of this war from the opposite side, which is still not well known in the West from the multitude of publications by Western historians. The reason for this, of course, is the fact that Soviet records pertaining to the Korean War were for a long time highly classified, since Soviet air units were fighting in the skies of North Korea incognito, so to speak or even more so to write about this was strictly forbidden in the Soviet Union right up to its ultimate collapse. The given work is in essence the first major work in the post-Soviet era. First published in a small edition in Russian in 1998, it was republished in Russia in 2007. For the first time, the Western reader can become acquainted with the most detailed and informative work existing on the course of the air war from the Soviet side, now in English language. The work rests primarily on the recollections of veterans of this war on the so-called 'Red' side - Soviet fighter pilots, who took direct part in this war on the side of North Korea. Their stories have been supplemented with an enormous amount of archival documents, as well as the work of Western historians. The author presents a literal day-by-day chronicle of the aerial combats and combat work of Soviet fighter regiments in the period between 1950 and 1953, and dedicates this work to all the men on both sides who fought and died in

the Korean air war.

Ambassadors from Earth Jay Gallentine, 2021-11-02 Rewind to the 1950s and ponder: was America's first satellite really built by a college student? How did a small band of underappreciated Russian engineers get pictures of the moon's far side--using stolen American film? As the 1960s progressed, consider: how the heck did people learn to steer a spacecraft using nothing but gravity? And just how were humans able to goose a spaceship through a thirty-year journey to the literal edge of our solar system? *Ambassadors from Earth* relates the story of the first unmanned space probes and planetary explorers--from the Sputnik and Explorer satellites launched in the late 1950s to the thrilling interstellar Voyager missions of the '70s--that yielded some of the most celebrated successes and spectacular failures of the space age. Keep in mind that our first mad scrambles to reach orbit, the moon, and the planets were littered with enough histrionics and cliffhanging turmoil to rival the most far-out sci-fi film. Utilizing original interviews with key players, bolstered by never-before-seen photographs, journal excerpts, and primary source documents, Jay Gallentine delivers a quirky and unforgettable look at the lives and legacy of the Americans and Soviets who conceived, built, and guided those unmanned missions to the planets and beyond. Of special note is his in-depth interview with James Van Allen, the discoverer of the rings of planetary radiation that now bear his name. *Ambassadors from Earth* is an engaging bumper-car ride through a fog of head-banging uncertainty, bleeding-edge technology, personality clashes, organizational frustrations, brutal schedules, and the occasional bright

spot. Confessed one participant, We were making it up as we went along.

The Osprey Encyclopedia of Russian Aircraft Bill Gunston, 2000-05-25
Sweeping away the red herrings and spurious details invented in the West between 1950 and 1970, this exhaustive volume can be offered to the public with the knowledge that it documents the true histories of some 1000 aircraft types. Much of what was believed to be fact has been proven wrong in various degrees, and it can confidently be claimed that no book in the history of aviation has ever contained so much new information. The volume is prefixed by sections on aircraft designations, engines, air launched weapons and much more - this really is the definitive work on Russian aircraft.

Cold War Submarines Norman Polmar, Kenneth J. Moore, 2014-05-14 Submarines had a vital, if often unheralded, role in the superpower navies during the Cold War. Their crews carried out intelligence-collection operations, sought out and stood ready to destroy opposing submarines, and, from the early 1960s, threatened missile attacks on their adversary's homeland, providing in many respects the most survivable nuclear deterrent of the Cold War. For both East and West, the modern submarine originated in German U-boat designs obtained at the end of World War II. Although enjoying a similar technology base, by the 1990s the superpowers had created submarine fleets of radically different designs and capabilities. Written in collaboration with the former Soviet submarine design bureaus, Norman Polmar and K. J. Moore authoritatively demonstrate in this landmark study how differing submarine missions, antisubmarine priorities, levels of technical competence, and approaches to submarine design organizations and management caused the divergence.
