Mathematical Modeling, Simulation and Optimization for Power Engineering and Management Simone Göttlich, Michael Herty, Anja Milde, 2021-02-02 This edited monograph offers a summary of future mathematical methods supporting the recent energy sector transformation. It collects current contributions on innovative methods and algorithms. Advances in mathematical techniques and scientific computing methods are presented centering around economic aspects, technical realization and large-scale networks. Over twenty authors focus on the mathematical modeling of such future systems with careful analysis of desired properties and arising scales. Numerical investigations include efficient methods for the simulation of possibly large-scale interconnected energy systems and modern techniques for optimization purposes to guarantee stable and reliable future operations. The target audience comprises research scientists, researchers in the R&D field, and practitioners. Since the book highlights possible future research directions, graduate students in the field of mathematical modeling or electrical engineering may also benefit strongly.

Energy Research Abstracts, 1977 Semiannual, with semiannual and annual indexes. References to all scientific and technical literature coming from DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies; Biomedical sciences, applied studies; Health and safety; and Fusion energy. Entry gives bibliographical information and abstract. Corporate, author, subject, report number indexes.

Problems in the Design and Development of 750 MW Turbogenerators V. P.

Anempodistov, E. G. Kasharskii, I. D. Urusov, 2014-07-03 Problems in the Design and Development of 750 MW Turbo-Generators covers selected problems mainly related to projected machines in the development of turbo-generators. This book describes the main lines of research at the Electromechanics Institute of the U.S.S.R. Academy of Sciences. This book is divided into six chapters and begins with an overview of the progress in the generation of electricity along with the rapid economic development of the U.S.S.R. The succeeding chapter deals with the use of efficient cooling system of the winding copper to address the problem of electrical machine's unit power performance. The discussion then shifts to a theoretical analysis of the so-called geometric series of large turbo-generators. A chapter examines the problems related to design of these machines, specifically the main mechanical factors limiting the dimensions of turbo-generators. The concluding chapters provide a summary of the results of the planned increase in unit output of the single-shaft 750 MW turbo-generator. This book is intended primarily to engineers, metallurgists, and scientists who deal with

the problems in the development of very large turbo-generators.

Power Transmissions Datong Qin, 2016-11-10 This book presents papers from the International Conference on Power Transmissions 2016, held in Chongqing, China, 27th-30th October 2016. The main objective of this conference is to provide a forum for the most recent advances, addressing the challenges in modern mechanical transmissions. The conference proceedings address all aspects of gear and power transmission technology and a range of applications. The presented papers are catalogued into three main tracks, including design, simulation and testing, materials and manufacturing, and industrial applications. The design, simulation and testing track covers topics

such as new methods and designs for all types of transmissions, modelling and simulation of power transmissions, strength, fatigue, dynamics and reliability of power transmissions, lubrication and sealing technologies and theories, and fault diagnosis of power transmissions. In the materials and manufacturing track, topics include new materials and heat treatment of power transmissions, new manufacturing technologies of power transmissions, improved tools to predict future demands on production systems, new technologies for ecologically sustainable productions and those which preserve natural resources, and measuring technologies of power transmissions. The proceedings also cover the novel industrial applications of power transmissions in marine, aerospace and railway contexts, wind turbines, the automotive industry, construction machinery, and robots.

Advanced Imaging of the Foot and Ankle, An issue of Foot and Ankle Clinics of North America, E-Book Jan Fritz, 2023-08-08 In this issue of Foot and Ankle Clinics, guest editor Dr. Jan Fritz brings his considerable expertise to the topic of Advanced Imaging in Foot and Ankle. Diagnostic imaging and image-guided injections can contribute valuable information for diagnosing and treating a broad spectrum of foot and ankle conditions. In this issue, top experts explore recent substantial technical developments that have considerably expanded the information that can be captured with foot and ankle imaging. Contains 14 practice-oriented topics including multiaxial 3D MRI of foot and ankle; image-guided foot and ankle joint injections; AI-based foot and ankle measurements; new foot and ankle MDCT update: CT arthrography, dual-energy CT, and photon counting CT; and more. Provides in-depth clinical reviews of advanced imaging in foot and ankle, offering actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create clinically significant, topic-based reviews.
