Analog and VLSI Circuits Wai-Kai Chen, 2018-10-08
Featuring hundreds of illustrations and references, this volume in the third edition of the Circuits and Filters Handbook, provides the latest information on analog and VLSI circuits, omitting extensive theory and proofs in favor of numerous examples throughout each chapter. The first part of the text focuses on analog integrated circuits, presenting up-to-date knowledge on monolithic device models, analog circuit cells, high performance analog circuits, RF communication circuits, and PLL circuits. In the second half of the book, well-known contributors offer the latest findings on VLSI circuits, including digital systems, data converters, and systolic arrays.

RapidIO Sam Fuller, 2004-12-27 RapidIO - The Embedded System Interconnect brings together one essential volume on RapidIO interconnect technology, providing a major reference work for the evaluation and understanding of RapidIO. Covering essential aspects of the specification, it also answers most usage questions from both hardware and software engineers. It will also serve as a companion text to the specifications when developing or working with the RapidIO interconnect technology. Including the history of RapidIO and case of studies of RapidIO deployment, this really is the definitive reference guide for this new area of technology.

Automated Fingerprint Identification Systems (AFIS) Peter Komarinski, 2005-01-20 An easy-to-understand synopsis of identification systems,

presenting in simple language the process of fingerprint identification, from the initial capture of a set of finger images, to the production of a Rapsheet. No other single work exists which reviews this important identification process from beginning to end. We examine the identification process for latent (crime scene) prints and how they are identified with these systems. While the primary focus is automated fingerprint identifications, the book also touches on the emergence and use of fingerprints in other biometric systems. Criminal justice administrators, policy makers, and students of forensic science and criminal justice will find a reference to the known limitations and advantages of these systems. This book provides information as to the critical and continual need for properly trained individuals as well as an understanding of the direct and indirect costs associated with maintaining these systems. An understanding of the entire system and what it means will prove invaluable. Why are there missed identifications? Why are identifications made on one database that are not made on another database? Key terms and issues are included, and well as suggestions for improving the overall number of identifications. The book will go beyond process and also discuss issues such as interoperability, management strategies for large databases, contract development, lights out verification and several other issues which impact automated identifications. - The first comprehensive title on this subject area - Outlines in detail the entire process of fingerprint gathering and

identity verification - The future of AFIS will be discussed, including national standards in developing multi-agency cooperation/interoperability (U.S.) in addition to the use of AFIS identification world-wide.

Gajiganna Karl Peter Wendt,2007-11-01 In this volume, Karl Peter Wendt presents the first comprehensive results of a series of archaeological excavations carried out at sites of the earliest food-producing communities known in the Chad Basin of Northeast Nigeria: the so-called Gajiganna Culture. He describes the background of research, sheds light on the information contained in the stratigraphies of the sites examined, and offers exhaustive and advanced statistical analysis on technological, temporal, typological and ornamental aspects of the pottery recovered in course of research. After considering the ceramic sequence in its absolute chronological framework, the author makes an attempt to detect possible cultural relations between the Gajiganna sites and other archaeological locations both within and outside the Chad Basin. The volume is complemented by a photographic documentation of the Gajiganna pottery assemblages.

Digital Workflows in Architecture Scott Marble,2013-01-01 The logics of digital processes in architecture have begun to structure the way that architects design, the way that builders build, and the way that industry is reorganizing. The process of architectural design has become a complex workflow. At the core of the shift toward

more expansive forms of digital production within the design and construction industry is the integration of communication through digital networks. The goal is to develop a continuous, easily accessible and parametrically adaptable body of information that coordinates the process from design through a building's lifecycle. Organized around the key fields of Designing Design, Designing Assembly and Designing Industry, this book is a reference work on digital technologies as key factors in architectural design, fabrication and workflow organization. It presents essays and case studies from some of the leading voices on the topic.

Ten Types of Innovation Larry Keeley, Helen Walters, Ryan Pikkell, Brian Quinn, 2013-07-15
Innovation principles to bring about meaningful and sustainable growth in your organization Using a list of more than 2,000 successful innovations, including Cirque du Soleil, early IBM mainframes, the Ford Model-T, and many more, the authors applied a proprietary algorithm and determined ten meaningful groupings—the Ten Types of Innovation—that provided insight into innovation. The Ten Types of Innovation explores these insights to diagnose patterns of innovation within industries, to identify innovation opportunities, and to evaluate how firms are performing against competitors. The framework has proven to be one of the most enduring and useful ways to start thinking about transformation. Details how you can use these innovation principles to bring about meaningful—and sustainable—growth within your organization Author

Larry Keeley is a world renowned speaker, innovation consultant, and president and co-founder of Doblin, the innovation practice of Monitor Group; BusinessWeek named Keeley one of seven Innovation Gurus who are changing the field. The Ten Types of Innovation concept has influenced thousands of executives and companies around the world since its discovery in 1998. The Ten Types of Innovation is the first book explaining how to implement it.
