Type 5 Heavy Freight Locomotives David

Cable, 2018-01-30 This photographic album portrays the four classes of locomotives introduced to operate on the British Railways system, prior to Privatization in 1994. Increasing loads and deteriorating reliability of older classes necessitated the design of new, higher horsepower classes of diesel locomotives to operate the increasing requirement to operate trains handling loads in bulk, such as coal, minerals, fuels etc. The four classes included one American design the class 59 which set new standards in haulage capacity and reliability. The other three designs classes 56, 58 and 60 were more suitable to their tasks than previous models, but in the case of the class 56, suffered a poor reputation for availability for several years, although the few remaining members of the class have now attained acceptable standards. Of the four classes, a small number of class 56s operate in private ownership, all the class 58s have been withdrawn, but all the class 59s and 60s are in daily use throughout England and Wales. This album has been written by David Cable, author of a series of illustrated books covering railways in the UK as well as overseas. The book shows examples of all four classes working a variety of duties at a wide range of locations.

The Tangam Language Mark W. Post, 2017-05-08

Tangam is a critically endangered Trans-Himalayan language spoken by 150 hilltribespeople in the Far Eastern Himalaya. This work presents a cultural, historical and grammatical introduction to the

Tangam language, a trilingual lexicon in Tangam, English and Minyong, and analysed texts.

Kampfpanzer Maus Michael öhlich,2017-01-28 In 1944 the Maus giant battle tank, weighing almost 190 tons, was supposed to help turn the Wehrmacht's fortunes of war on the Eastern Front. Just two prototypes of this monster were delivered, for its undeniable advantages--tremendous firepower and virtually impenetrable armor--were outweighed by the disadvantages of its slowness, excessive use of materials in construction, and fuel consumption so high that it was, by that time, far beyond the Germans' ability to supply. With this volume, Michael Fröhlich continues the legendary Spielberger series and delves into one of the most curious military vehicles produced by Germany--the Maus super-heavy tank. For the first time, this book tells the complete story of this vehicle, including its inner workings, accompanied by many previously unpublished illustrations. But that is not all: the book includes another novelty, the complete operating instructions for the tank's crew!

Light and Heavy Vehicle Technology M.J. Nunney,2013-10-22 Light and Heavy Vehicle Technology, Second Edition deals with the theory and practice of vehicle maintenance, procedure, and diagnosis of vehicle trouble, including technological advances such as four-wheel drive, four-wheel steering, and anti-lock brakes. The

book reviews the reciprocating piston petrol engine, the diesel engine, the combustion chambers, and the different means of combustion processes. To counter friction, heat and wear, lubrication to the different moving parts is important. To counter excessive heat which can cause breakdown of lubricating oil films and materials such as gaskets, O-rings, the engine is designed with a cooling system that uses air, water, or engine coolants. Petrol engines use the carburation or injection type of fuel delivery; diesel engines use a high pressure system of fuel injection owing to the higher pressures existing in the diesel combustion chamber. The text explains the operation of the other parts of the vehicle including the ignition and starter system, emission controls, layshaft gearboxes, drive lines, and suspension systems. Heavy vehicles need highly efficient air brakes to stop them compared to the hydraulic brake systems used in smaller and lighter vehicles. The book is suitable for mechanical engineers, engine designers, students, and instructors in mechanical and automotive engineering.

British Rail Class 60 Locomotives Edward Glead,2016-07-15 During the mid-1980s, in a drive for greater efficiency, British Rail required another heavy freight locomotive, some of the earlier Type 5 freight locomotives being outdated

and no longer regarded as suitable for heavy freight duties. The new Class 60 locomotive was to be constructed using lessons learned from the Classes 56 and 58. Six organisations were invited to tender but only three did so. The contract was awarded to Brush Electrical Machines (today, Brush Traction, part of the Wabtec Rail Group) for a powerful 60mph Type 5 Co-Co design, which resulted in an order being placed for one hundred Class 60 diesel-electric locomotives. Using original research from the National Archives, *British Rail Class 60 Locomotives* is a high illustrated guide that explores the commissioning of the Class 60s and their construction, testing and running. It undertakes an in-depth technical appraisal of the class and details names, liveries, modifications and preservation and includes the 'Super 60' refurbishment programme and acquisition of ten Class 60s for Colas Rail UK, bringing the timeline to the present day. Of interest to all diesel loco enthusiasts and railway modellers, this book is lavishly illustrated with 280 colour and black & white photographs, many previously unpublished.
