*Kaalkut* Jaidev Jamwal, Wars between nations don't start based on a single incident nor are they fought by just the combatants alone. Starting a war in the shadow of a nuclear umbrella is something that no responsible nation state will consider lightly. Yet, Pakistan has done it once in 1999 with India and its biggest ally China is virtually on the same path. Yet it has the sense to stop from pushing too hard and most such provocations fizzle out in time. But what happens if things don't go as expected? Any wild card like a rogue general, a stronger than usual Indian response by a hawkish regime or any other factor can quickly escalate the minor border clashes to a full-fledged war leading to a nuclear exchange. This book explores these possibilities in two parts. The first one covers the incidents of statecraft, spycraft, provocations, terrorism and perception management which are more or less routine matters for most nations. The last few chapters cover a two-front war involving India on one side and Pakistan and China on the other and

how it could go considering each side has nuclear weapons. The warfare has been described keeping current capabilities and ORBAT (Order Of Battle) of all sides in mind. It is of course not 100% accurate, but close enough for the purpose. Wars between nations don't start based on a single incident nor are they fought by just the combatants alone. Chinese Strategy and Military Modernization in 2015 Anthony H.

Cordesman, Steven Colley, 2016-01-12 China's emergence as a global economic superpower, and as a major regional military power in Asia and the Pacific, has had a major impact on its relations with the United States and its neighbors. China was the driving factor in the new strategy the United States announced in 2012 that called for a "rebalance" of U.S. forces to the Asia-Pacific region. At the same time, China's actions on its borders, in the East China Sea, and in the South China Sea have shown that it is steadily expanding its geopolitical role in the Pacific and having a steadily increasing impact on the strategy and military developments in other Asian powers.

**Chinese Strategy and Military Power in 2014** Anthony H. Cordesman, 2014-11-25 This report tracks and analyzes trends in Chinese military strategy, force structure, and regional activity. Chinese perspectives on their military's role and development are featured, as well as the views of other relevant regional actors.

**Tao of Soldiering** Nihar Kuanr, 2020-03-30 Soldiering is all about the growth and development of human potential in the military organization. The approach to soldiering in China is apparently distinct as compared to Indian or Western military and the shaping of soldiery in China has taken a very unique and somewhat enigmatic course. In the context of PLA, in the ongoing reform era, a clear shift in the approach to HRM is apparent. One of the most

important objectives of the ongoing reforms and restructuring of PLA is to appreciably augment its potential and efficiency for the effective prosecution of Integrated Joint operations (IJO) for winning Local Wars under Informationised Condition (LWUIC). This book attempt has been made to take a holistic look at soldiering and development of human potential in PLA thus progressing understanding in the broadly interpreted field of HRM in the context of the Chinese military. The author argues that PLA has been adopting a very systematic, methodical and focussed approach towards identifying the key issues and addressing them in a time-bound manner to enhance the quality of its personnel to include the enlisted personnel, NCOs, officers, and higher leadership. However, success or failure of HR policies depends as much on several tangible factors(educational qualification, technological prowess, economic and social background), as on various intangible aspects (influence of culture, belief system, traditional practices, political and ideological factors impinging on the morale, motivation and value system). The book would enable interested readers to comprehend and grasp the nuances of the development of human potential in the military in general and PLA in specific. Various HRD themes like organizational culture, leadership, efficient decision making, etc. analyzed in the book can find application in general context as well.

**The Royal Air Force: The Trenchard Years, 1918–1929** Ian M. Philpott, 2005-07-19 The inter-war years between 1918 and 1939 saw the newly created Royal Air Force fighting for its very existence politically, being dispatched to the remotest corners of the British Empire and its Protectorates in various policing roles and then finally engaged in a headlong rush to modernize in the face of the new German Fascist regime that

was threatening British and European freedom. Yet this important period in RAF history and its effect on political and military rationale during the period has never been completely documented. This exhaustive and comprehensive reference is the most detailed work to be published on the subject. The author gives full information on the changing structure of the Force during the period, squadron operations, political machinations and their effects, the airplanes and their equipment, the personnel, technical advances in navigation and breakthroughs achieved in engine performance. The book is cross-referenced throughout, extremely well illustrated and contains an abundance of location maps and other diagrams. This book will become a Bible for anyone interested in the history of the RAF. This work has been reviewed by personnel at the RAF Historical Branch who praise it.

Domain Science and Engineering Dines Bjørner, 2021-11-08 In this book the author explains domain engineering and the underlying science, and he then shows how we can derive requirements prescriptions for computing systems from domain descriptions. A further motivation is to present domain descriptions, requirements prescriptions, and software design specifications as mathematical quantities. The author's maxim is that before software can be designed we must understand its requirements, and before requirements can be prescribed we must analyse and describe the domain for which the software is intended. He does this by focusing on what it takes to analyse and describe domains. By a domain we understand a rationally describable discrete dynamics

segment of human activity, of natural and man-made artefacts, examples include road, rail and air transport, container terminal ports, manufacturing, trade, healthcare, and urban planning. The book addresses issues of seemingly large systems, not small algorithms, and it emphasizes descriptions as formal, mathematical quantities. This is the first thorough monograph treatment of the new software engineering phase of software development, one that precedes requirements engineering. It emphasizes a methodological approach by treating, in depth, analysis and description principles, techniques and tools. It does this by basing its domain modeling on fundamental philosophical principles, a view that is new for a computer science monograph. The book will be of value to computer scientists engaged with formal specifications of software. The author reveals this as a field of interesting problems, most chapters include pointers to further study and exercises drawn from practical engineering and science challenges. The text is supported by a primer to the formal specification language RSL and extensive indexes.

language, viewed from a range of perspectives essential for students' understanding of the subject. This edition includes a completely new section on sentence use, including an introduction and discussion of core areas of pragmatics and conversational analysis; coverage of sociolinguistic topics, introducing communities of practice; a wealth of new exercise material and updated further reading.
