Proceedings, Seventh AFCRL Scientific Balloon Symposium George F. Nolan, 1973 The report contains the papers presented at the Seventh AFCRL Scientific Balloon Symposium held in September 1972. The papers were presented in three sessions: Tethered and powered balloons, balloon-borne experiments, and instrumentation and balloon technology. In the area of tethered balloons, papers were presented on cables, drag and stability characteristics, hull design and analysis, and the results of scientific experiments using tethered balloons as sensor platforms. Papers were presented on a powered spherical balloon and a survey of possible power sources for use by this system. Presentations during the balloon-borne experiments and instrumentation session included manned balloon flights, precision pointing and control platforms and instrumentation, recovery parachute performance, gondola motion analyses, a balloon radar altimeter, and an overview of French scientific ballooning activities. During the

balloon technology session a review was made of the flight results and performance of balloons with volumes in excess of 20 million cubic feet, shape and stress analysis of both nonreinforced and reinforced materials, and fabric tinting to increase solar absorptivity.

Forensic Uses of Clinical Assessment Instruments Robert P.

Archer,2013-04-15 The purpose of this book is to provide a firm basis for psychologists to understand the appropriate uses and limitations of popular clinical assessment measures as they are applied to forensic issues. The instruments were selected because of their wide use and importance in both clinical and forensic settings. The PCL-R, the PAI, and MCMI-II, for example, are typically used with adults in criminal evaluations; the MMPI-A is often used in evaluating adolescents in detention and correctional facilities; while the Child Behavior Checklist (CBCL) (Achenbach, 1991), Personality Inventory for Children--Second Edition (PIC-2) (Lachar & Gruber, 2001), and Parenting Stress Index (PSI) (Abidin, 1995) are more commonly used in evaluating families involved in child protection and custody cases. Instruments such as the MMPI-2, the Rorschach, and the Halstead-Reitan Neuropsychological Battery are widely used across many types of forensic evaluations, although the latter category of testing is particularly related to personal injury evaluations. The end result is a unique and indispensable reference: a comprehensive overview, within a single text, of prominent clinical assessment instruments widely used for forensic purposes and designed to facilitate the optimal use of clinical assessment instruments among psychologists who have undertaken the training necessary to understand and apply psychological principles and test findings to salient legal standards or issues.
