**Worldwide Guide to Equivalent Nonferrous Metals and Alloys** Fran Cverna,2001-01-01 This latest edition incorporates the many changes in the specifications and designations of nonferrous alloys that have occurred over the past five years. The volume features over 20,000 alloy designations, including a complete listing of UNS designations for nonferrous alloys and comprehensive treatment of current European and Japanese standards. It covers more countries, more alloys, and more standards than previous editions, while keeping obsolete designations for those persons trying to duplicate equipment from old documents. This comprehensive volume is well-indexed with easy-to-use cross references that make short work of looking up equivalents for a material specification or designation. It provides valuable composition tables that allow you to compare similar alloys. Tensile properties and product forms are provided when available.

**Inner Solar System** Viorel Badescu,Kris Zacny,2015-07-02 This book investigates Venus and Mercury prospective energy and material resources. It is a collection of topics related to exploration and utilization of these bodies. It presents past and future technologies and solutions to old problems that could become reality in our life time. The book therefore is a great source of condensed information for specialists interested in current and impending Venus and Mercury related activities and a good starting point for space researchers, inventors, technologists and potential investors. Written for researchers, engineers, and businessmen interested in Venus and Mercury exploration and

exploitation.

Light Alloys Robert John Hussey,Josephine Wilson,2013-04-17 Light Alloys Directory and Databook is a world-wide directory of the properties and suppliers of light alloys used in, or proposed for, numerous engineering applications. Alloys covered will include aluminium alloys, magnesium alloys, titanium alloys, beryllium. For the metals considered each section will consist of: a short introduction; a table comparing basic data and a series of comparison sheets. The book will adopt standardised data in order to help the reader in finding and comparing different materials and identifying the required information. All comparison sheets are cross-referenced, so that the user will be able to locate data on a specific product or compare properties easily. The book is designed to complement the existing publications on high performance materials.

*Smithells Light Metals Handbook* G B Brook,1998-02-17 The Smithells Metals Reference Book is one of the best known and most trusted sources of reference for the professional metallurgist or materials scientist, and has been so since its inception in 1949. Drawing upon the data contained within this respected work, and completely updating and revising it where necessary to bring the information completely up to date, the editors have created a new book which is dedicated to the most commonly used and popular light metals. The Smithells Light Metals Handbook, with its combination of comprehensive data on properties, standards and international materials specifications coupled with other unique features like the extensive section of binary phase diagrams, will no doubt become a standard reference work for the industrial and theoretical metallurgist. Containing all the data that you will ever

need with respect to Aluminium, Magnesium and Titanium, this book will be an invaluable tool for anyone working in the design, manufacture or use of components or raw materials in these areas. The standard reference work for metallurgists Contains all data for researchers and professional metallurgists Fully updated

*Observations on Delayed Cracking in Welded Structures of Unalloyed Titanium Sheet* R. H. Ernst,D. N. Williams,H. R. Ogden,1964 A brief study of delayed fracture in a seam-welded titanium panel is summarized in this memorandum. Examination of the fracture surface with electron microscopy showed that the material cleaved, failing in a brittle manner. Although the nature of the embrittlement was not clearly defined, titanium hydride phase was suspected as a prime contributor to failure. Even though the hydrogen content of the titanium was only 65 ppm, hydride embrittlement was thought to have occurred from precipitation of hydride platelets on crystal planes oriented normal to welding stresses. Other work, briefly discussed in the memorandum, has confirmed that hydride platelets in titanium can be oriented by stress and that tensile ductility of Zircaloy (which behaves similarly with respect to hydrogen, to titanium) depends upon hydride orientation. Stress-relief annealing of welded titanium structures is recommended wherever possible to minimize embrittlement by stress-oriented hydrides. (Author).
