Friction and Wear I V Kragelsky, M N Dobychin, V S Kombalov, 2013-10-22 Friction and Wear: Calculation Methods provides an introduction to the main theories of a new branch of mechanics known as contact interaction of solids in relative motion. This branch is closely bound up with other sciences, especially physics and chemistry. The book analyzes the nature of friction and wear, and some theoretical relationships that link the characteristics of the processes and the properties of the contacting bodies essential for practical application of the theories in calculating friction forces and wear values. The effect of the environment on friction and wear is also considered. Finally, the requirements, which must be fulfilled by the physicommechanical properties of the materials of which contacting bodies are made and which determine their behavior in moving contacts, are formulated. The book will be of interest to a wide circle of readers, e.g. engineers, designers, machine users, and research workers, working on the production of wear-resistant materials and working on the nature of friction and wear.

Cars of the Soviet Union Andy Thompson, 2008 The story of the Soviet Union's cars has to be seen in the context of a planned society in which everything was planned well in advance, and consumer items were not a priority until well after the Second World War. This extraordinarily detailed study charts the history of Soviet cars from the birth of the Soviet Union in 1917 until its demise in 1990, with a conclusion about the post-Soviet era. It is the story of an insular, state-run car industry in which the carefully thought-out ideas of

ministerial planners, rather than fickle customers in a free market, determined what cars were made in a country where the open road was often a 300-mile track across a windswept steppe.

Ghosts in the Fog Nathan Best,2023-08-02 Damien Hunter has escaped to the frigid and untamed Russian-controlled Arctic, leaving behind the Taipan Organisation. Scarred and traumatised from combat missions without end, Damien conceals himself among the

offshore workers on the Nevzgody gas platform. For the glory of Chechnya, fanatical separatist leader Sheikh Taimieov plans a terrorist strike against the heart of Russia's economy. He entrusts his loyal commander Talhig Chechenskiy with the perilous mission in the unforgiving and unprotected Arctic gas fields. Major Georgiy Urvantsev commands an Alpha Unit of Russia's federal security service, the FSB. Warned of a terror attack, Georgiy feels like he is chasing ghosts, locked in a running battle with Talhig's fighters. Georgiy must engage all his skills and resources to defend his country. Damien is thrown into combat when he is caught up in the assault on the platform. Unbeknown to Damien, Taipan accepts a contract to take back the facility and inserts a team. Damien is forced into a mission he wants no part of. He and Taipan 21 form an uneasy alliance out of necessity. Unlike the men of Taipan 21, however, Damien tries to save lives while engaging the fanatical fighters. The Russian Arctic is stained by the devastation of this conflict.

Proceedings of the 2020 USCToMM Symposium on Mechanical Systems and Robotics Pierre Larochelle,J. Michael McCarthy,2020-04-20 This volume gathers the latest fundamental research contributions, innovations, and applications in the field of design and analysis of complex robotic mechanical systems, machines, and mechanisms, as presented by leading international researchers at the 1st USCToMM Symposium on Mechanical Systems and Robotics (USCToMM MSR 2020), held in Rapid City, South Dakota, USA on May 14-16, 2020. It covers highly diverse topics, including soft, wearable and origami robotic systems; applications to walking, flying, climbing, underground, swimming and space systems; human rehabilitation and performance augmentation; design and analysis of mechanisms and machines; human-robot collaborative systems; service robotics;

mechanical systems and robotics education; and the commercialization of mechanical systems and robotics. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting and impactful research results that will inspire novel research directions and foster multidisciplinary research collaborations among researchers from around the globe.

Block by Block William Glenn Robertson, Lawrence A. Yates, 2003 First published by the Combat Studies Institute Press. The resulting anthology begins with a general overview of urban operations from ancient times to the midpoint of the twentieth century. It then details ten specific case studies of U.S., German, and Japanese operations in cities during World War II and ends with more recent Russian attempts to subdue Chechen fighters in Grozny and the Serbian siege of Sarajevo. Operations range across the spectrum from combat to humanitarian and disaster relief. Each chapter contains a narrative account of a designated operation, identifying and analyzing the lessons that remain relevant today.
