*Future Capabilities and Roles of Uninhabited Combat Aerial Vehicles (UCAV)*. ,2004 In 2001, Congress stated ... that, within 10 years, one-third of U.S. military operational deep strike aircraft would be unmanned and, within 15 years, one-third of all U.S. military ground combat vehicles would be unmanned. While aggressive and optimistic, this statement demonstrates the determination of our nation's decision makers in supporting unmanned aviation technology. This determination, coupled with recent successes in the Joint Unmanned Combat Air Systems (J-UCAS) demonstration program, makes uninhabited combat aerial vehicles (UCAV) a credible combat force in the near future. Unfortunately, the futuristic air surrounding these accomplishments has led to inaccurate analysis methods for future employment, resulting in outlandish claims or limited expectations. In similar circumstances, other emerging technologies have been rushed into use, without the establishment of joint doctrine, with fatal results. Therefore, to exploit UCAV's emerging abilities, military leaders must possess a clear analysis of the unmanned systems undergoing testing, the advantages and limitations of UCAVs, the weapons intended for integration, and the implications of using these unique capabilities under existing doctrinal architecture. (2 figures, 28 refs.).

Drone Strike! Bill Yenne,2017 By 1999, few people outside the military recognized the potential of armed, unmanned flying vehicles. In today's digital world, Unmanned Combat Aerial vehicles, or UCAVs, form a vital part of U.S. military strike forces and are controlled electronically from halfway around the world.--back cover.

**Review of ONR's Uninhabited Combat Air Vehicles Program** National Research Council,Commission on Physical Sciences, Mathematics, and Applications,Naval Studies Board,Committee for the Review of ONR's Uninhabited Combat Air Vehicles Program,2000-07-24 Joint Vision 20101 addresses the need for achieving military dominance through the application of new operational concepts. For the Department of the Navy, future operational concepts will hinge on a continuance of forward yet unobtrusive presence and the capability to influence events ashore as required. This capability will be enabled by the development and insertion into the forces of new technologies for providing command, control, and surveillance; battlespace dominance; power projection; and force sustainment. For example, unmanned aerial vehicles (UAVs) have recently proven to be valuable operational platforms for providing tactical intelligence by surveillance of the battlefield. To support naval force objectives, the Office of Naval Research (ONR) has established a research program within the Strike Technology Division (Code 351) of the Naval Expeditionary Warfare Science and Technology Department aimed at expanding the operational capabilities of UAVs to include not only surveillance and reconnaissance, but strike and logistics missions as well. This new class of autonomous vehicles, known as uninhabited combat air vehicles (UCAVs), is foreseen as being intelligent, recoverable, and highly maneuverable in support of future naval operations. Review of ONR'S Uninhabited Combat Air Vehicles Program evaluates ONR's UCAV technology activities, including its vision documents and its science and technology roadmap (in areas of vehicle dynamics, communications, sensors, and autonomous agents) against criteria that would be selected by the committee, such as the relevance for meeting future naval priorities, the cost and time scale for its utilization, duplication of effort, and scientific and technical quality.

**One Nation Under Drones** John E Jackson, 2018-11-15 One Nation Under Drones is an interesting and informative review of how robotic and unmanned systems are impacting every aspect of American life, from how we fight our wars; to how we play; to how we grow our food. Edited by Professor John Jackson, who holds the E.A. Sperry Chair of Unmanned and Robotic Systems at the United States Naval War College, this highly readable book features chapters from a dozen experts, researchers, and operators of the sophisticated systems that have become ubiquitous across the nation and around the world. Press reports have focused primarily on Unmanned Aerial Vehicles, officially designated as UAVs, but more often referred to as drones. This book takes you behind the scenes and describes how Predators, Reapers, Scan Eagles and dozens of other pilotless aircraft have been used to fight the Global War on Terrorism. Although these systems seemed to emerge fully-developed into the skies above America's distant battlefields following the attacks of 9-11-2001, readers will discover how they actually trace their lineage to the First World War, when the automatic airplane/aerial torpedo, designed and built by the Sperry Gyroscope Company, made its first flight just over a century ago. Unmanned aircraft were used by various combatants in World War II, and took many forms: from converted manned bombers to inter-continental attacks on the American homeland by rice-paper balloons. Technology developed in the latter decades of the 20th century enabled crews stationed thousands of miles away to attack targets on remote battlefields. Such long-range and remote-controlled weapons have been extensively used, but are controversial from both legal and ethical stand-points. Chapters written by international law specialists and drone pilots with advanced education in ethics address these issues from both sides of the argument. The book also details how robotic systems are being used on land, in and below the seas, and in civilian applications such as driverless cars. Three dozen photographs display drones as small as an insect up to those as large as a 737 airliner. One Nation Under Drones covers such a wide array of topics that it will be of interest to everyone from the casual reader seeking to know more about these systems, to national security professionals, both in and out of uniform, who will be making decisions about their procurement and use in decades to come. This work will become the definitive volume on the subject, providing the facts and avoiding the hype about systems that have moved off the pages of science fiction and into the environment all around us.

*Uninhabited Combat Aerial Vehicles: Airpower by the People, For the People, But Not With the People*, 1999 This study examines the obstacles that uninhabited combat aerial vehicles (UCAV) will face in achieving significant operational capability and discusses whether or not they can be overcome. The author starts out by tracing the evolution of UCAVs starting before the first manned flight and ending in the late 1970s when the Air Force abandoned all efforts in UCAV development. The study also describes the obstacles that prevented UCAVs from becoming operational in the past. Next, the writer explains how the UCAV reappeared in Air Force research and

development efforts in the 1990s, and explains whether the same obstacles of the past will be obstacles in the future. The study concludes with a description of the obstacles that UCAVs will likely face and recommends solutions to help overcome them.

*An Examination of Latency and Degradation Issues in Unmanned Combat Aerial Vehicle Environments* Shane A. Dougherty, 2002 There are two basic ways to control an Unmanned Combat Aerial Vehicle (UCAV) as it searches for targets: allow the UCAV to act autonomously or employ man-in-the-loop control. There are also two target sets of interest: fixed or mobile targets. This research focuses on UCAV-based targeting of mobile targets using man-in-the-loop control. In particular, the interest is in how levels of satellite signal latency or signal degradation affect the ability to accurately track, target, and attack mobile targets. This research establishes a weapon effectiveness model assessing targeting inaccuracies as a function of signal latency and/or signal degradation. The research involved three phases. The first phase in the research was to identify the levels of signal latency associated with satellite communications. A literature review, supplemented by interviews with UAV operators, provided insight into the expected range latency values. The second phase of the research identified those factors whose value, in the presence of satellite signal latency, could influence targeting errors during UCAV employment. The final phase involved developing and testing a weapon effectiveness model explicitly modeling satellite signal latency in UCAV targeting against mobile targets. This phase included an effectiveness analysis study.

*UCAV - The Next Generation Air-Superiority Fighter?*, 2002 Air superiority is an essential military mission, and will continue to be so for the foreseeable future, Control of the air is not an end of its own, but rather it provides the flexibility and freedom of action central to a full range of military capabilities In the coming century the United States will confront a number of disparate and ambiguous challenges to its hegemony The resources available to meet those challenges will undoubtedly be constrained, Extremely long lead times in the acquisition and procurement of new technologies mean that now, as the F-22 Raptor begins to replace the venerable F-15 Eagle, the next- generation air-superiority fighter is entering development Unmanned aircraft must be considered as an alternative to manned aircraft for this critical mission, While cost has been the driving factor for advances in UCAV, technology has been the major limitation This thesis concludes that an air-superiority UCAV should be feasible by the year 2025 and that it should provide an effective and affordable alternative to manned

air-superiority fighters.

**The Drone Debate** Avery Plaw, Matthew S. Fricker, Carlos Colon, 2015-12-24 The Drone Debate offers a thorough investigation of the where, why, how, and when of the U.S.'s use of UAVs. Beginning with a historical overview of the use of drones in warfare, it then addresses whether targeted killing operations are strategically wise, whether they are permissible under international law, and the related ethical issues. It also looks at the political factors behind the use of drones, including domestic and global attitudes toward their use and potential issues of proliferation and escalation. Finally, the use of drones by other countries, such as Israel and China, is examined. Each chapter features a case study that highlights particular incidents and patterns of operation in specific regions, including Yemen, Somalia, Pakistan, and Libya and strike types (signature strikes, personality strikes, etc.).

**Combat Modeling** Alan Washburn, Moshe Kress, 2009-08-14 Combat Modeling is a systematic learning resource and reference text for the quantitative analysis of combat. After a brief overview, authors Washburn and Kress present individual chapters on shooting without feedback; shooting with feedback; target defense; attrition models; game theory and wargames; search; unmanned aerial vehicles; and terror and insurgency. Three appendices provide a

review of basic probability concepts, probability distributions, and Markov models; an introduction to optimization models; and a discussion of Monte-Carlo simulations. Drawing on their many years of experience at the Naval Postgraduate School in Monterey, California, Washburn and Kress have created a reference that will provide the tools and techniques for analysts involved in the underpinnings of combat decisions. This is a book that can be used as a military manual, reference book, and textbook for military courses on this vital subject.
