Unmanned Aviation Laurence R. Newcome,2004 Newcome traces the family tree of unmanned aircraft all the way back to their roots as aerial torpedoes, which were the equivalent of todays cruise missiles. He discusses the work of leading aerospace pioneers whose efforts in the area of unmanned aviation have largely been ignored by history.

UAVs: Unmanned Aerial Vehicles John Hamilton,2012-01-01

This title explores the development and use of unmanned aerial

vehicles, or remotely piloted aircraft, more commonly known as drones. Readers will follow the history of the origins and development of the incredible military technology behind UAVs such as the Predator Drone, the Wasp Micro-Air Vehicle, the Global Hawk unmanned aerial vehicle, the hand-launched remote control RQ-11 Raven for field troops, and the long-endurance hunter-killer MQ-9 Reaper. Chapters detail their military and performance specifications as well as their features and advantages in the field (including their cameras, sensors, control systems, and weapons) and their pilots (often sitting on the other side of the world). Readers will also learn about their use in significant combat and surveillance missions throughout the Middle East and in other countries. Includes spec boxes and other text features. Aligned to Common Core Standards and correlated to state standards. A&D Xtreme is an imprint of Abdo Publishing, a division of ABDO.

Advances in Unmanned Aerial Vehicles Kimon P.

Unmanned Aerial Vehicle: Applications in Agriculture and Environment Ram Avtar, Teiji Watanabe, 2019-11-18 This book showcases how new and emerging technologies like Unmanned Aerial Vehicles (UAVs) are trying to provide solutions to unresolved socio-economic and environmental problems. Unmanned vehicles can be classified into five different types according to their operation. These five types are unmanned ground vehicles, unmanned aerial vehicles, unmanned surface vehicles (operating on the surface of the water), unmanned underwater vehicles, and unmanned spacecraft. Unmanned vehicles can be guided remotely or function as autonomous vehicles. The technology has a wide range of uses including agriculture, industry, transport, communication, surveillance and environment applications. UAVs are widely used in precision agriculture; from monitoring the crops to crop damage assessment. This book explains the different methods in which they are used, providing step-by-step image processing and sample data. It also discusses how smart UAVs will provide unique opportunities for manufacturers to utilise new technological trends to overcome the current challenges of UAV applications. The book will be of great interest to researchers engaged in forest carbon measurement, road patrolling, plantation monitoring, crop yield estimation, crop damage assessment, terrain modelling, fertilizer control, and pest control.

Unmanned Aerial Vehicles Rogelio Lozano,2013-02-04 This book presents the basic tools required to obtain the dynamical models for aerial vehicles (in the Newtonian or Lagrangian approach). Several control laws are presented for mini-helicopters, quadrotors, mini-blimps, flapping-wing aerial vehicles, planes, etc. Finally, this book has two chapters devoted to embedded control systems and Kalman filters applied for aerial vehicles control and navigation. This book presents the state of the art in the area of UAVs. The aerodynamical models of different configurations are presented in detail as well as the control strategies which are validated in experimental platforms.

Autonomous Control of Unmanned Aerial Vehicles Victor
Becerra,2019-06-24 Unmanned aerial vehicles (UAVs) are being
increasingly used in different applications in both military and
civilian domains. These applications include surveillance,
reconnaissance, remote sensing, target acquisition, border patrol,
infrastructure monitoring, aerial imaging, industrial inspection, and
emergency medical aid. Vehicles that can be considered
autonomous must be able to make decisions and react to events
without direct intervention by humans. Although some UAVs are
able to perform increasingly complex autonomous manoeuvres,
most UAVs are not fully autonomous; instead, they are mostly
operated remotely by humans. To make UAVs fully autonomous,

many technological and algorithmic developments are still required. For instance, UAVs will need to improve their sensing of obstacles and subsequent avoidance. This becomes particularly important as autonomous UAVs start to operate in civilian airspaces that are occupied by other aircraft. The aim of this volume is to bring together the work of leading researchers and practitioners in the field of unmanned aerial vehicles with a common interest in their autonomy. The contributions that are part of this volume present key challenges associated with the autonomous control of unmanned aerial vehicles, and propose solution methodologies to address such challenges, analyse the proposed methodologies, and evaluate their performance.

Unmanned Aerial Vehicles Steven J. Zaloga,2011-07-20
Unmanned aerial vehicles (UAVs) are the most dynamic field of

aerospace technology, and have only emerged from the shadows recently, despite having been in use for decades. After some limited use in World War II, UAVs emerged as substitutes for manned reconnaissance aircraft in missions deemed too dangerous to risk an aircrew. This book examines the development of UAV technology and speculates on its future potential. Packed with rare, recently declassified photographs and detailed full-colour cutaways, this title goes on to investigate the deployment of UAVs, from early Israeli airforce use to their current role over Iraq and Afghanistan today.

State Estimation and Control for Low-cost Unmanned Aerial Vehicles Chingiz Hajiyev, Halil Ersin Soken, Sıtkı Yenal Vural, 2015-06-10 This book discusses state estimation and control procedures for a low-cost unmanned aerial vehicle (UAV). The authors consider the use of robust adaptive Kalman filter algorithms and demonstrate their advantages over the optimal Kalman filter in the context of the difficult and varied environments in which UAVs may be employed. Fault detection and isolation (FDI) and data fusion for UAV air-data systems are also investigated, and control algorithms, including the classical, optimal, and fuzzy controllers, are given for the UAV. The performance of different control methods is investigated and the results compared. State Estimation and Control of Low-Cost Unmanned Aerial Vehicles covers all the important issues for designing a guidance, navigation and control (GNC) system of a low-cost UAV. It proposes significant new approaches that can be exploited by GNC system designers in the future and also reviews the current literature.
