Agents for Games and Simulations II F. Dignum,2011-01-14 While today's game engines and multi-agent platforms cross-fertilize each other to some extent, the technologies used in these areas are not readily compatible due to some differences in their primary concerns. Where game engines prioritize efficiency and central control, multi-agent platforms focus on agent autonomy and sophisticated communication capabilities. This volume gives an overview of the current state of the art for people wishing to combine agent technology with (serious) games. This state-of-the-art survey contains a collection of papers presented at AGS 2010; the Second International Workshop on Agents for Games and Simulations, held on May 10, 2010, in Toronto, as well as extended versions of papers from other workshops and from the AAMAS conference. The 14 papers are organized in three topical sections focusing on architectures combining agents and game engines, on the training aspects of the games, on social and organizational aspects of games and agents, respectively.

Learning by Playing Fran Blumberg,2014 There is a growing recognition in the learning sciences that video games can no longer be seen as impediments to education, but rather, they can be developed to enhance learning. Educational and developmental psychologists, education researchers, media psychologists, and cognitive psychologists are now joining game designers and developers in seeking out new ways to use video game play in the classroom. In Learning by Playing, a diverse group of contributors provide perspectives on the most current thinking concerning the ramifications of leisure video game play for academic classroom learning. The first section of the text provides foundational understanding of the cognitive skills and content knowledge that children and adolescents acquire and refine during video game play. The second section explores game features that captivate and promote skills development among game players. The subsequent sections discuss children and adolescents' learning in the context of different types of games and the factors that contribute to transfer of learning from video game play to the classroom. These chapters then form the basis for the concluding section of the text: a specification of the most appropriate research agenda to investigate the academic potential of video game play, particularly using those games that child and adolescent players find most compelling. Contributors include researchers in education, learning sciences, and cognitive and developmental psychology, as well as instructional design researchers.

Believable Bots Philip Hingston,2012-10-19 We share our modern world with bots – chatbots to converse with, roombots to clean our houses, spambots to fill our e-mail inboxes, and medibots to assist our surgeons. This book is about computer game bots, virtual companions who accompany us in virtual worlds or sharpen our fighting skills. These bots must be believable, that is human players

should believe they are interacting with entities operating at a human level – bots are more fun if they behave like we do. This book shows how to create believable bots that play computer games, and it discusses the implications of making them appear human. The chapters in this book present the state of the art in research on and development of game bots, and they also look beyond the design aspects to address deep questions: Is a bot that plays like a person intelligent? Does it have emotions? Is it conscious? The topic is inherently interdisciplinary, and the work draws from research and practice in many fields, such as design, creativity, entertainment, and graphics; learning, psychology, and sociology; artificial intelligence, embodiment, agents, machine learning, robotics, human-computer interaction, and artificial life; cognition and neuroscience; and evolutionary computing. The contributing authors are among the leading researchers and developers in this field, and most of the examples and case studies involve analysis of commercial products. The book will be of value to graduate students and academic researchers in artificial intelligence, and to engineers charged with the design of entertaining games.

Pioneers in Machinima: The Grassroots of Virtual Production Tracy G. Harwood,Ben Grussi,2021-09-07 This important new work focuses on the pioneers in machinima, considered to be the grassroots and beginnings of virtual production. Machinima's impacts are identified by the community, supplemented by Harwood and Grussi's research and experience over a period of 25 years – from game, film and filmmaking to digital arts practice, creative technologies developments and related research and theory. Machinima is the first digital cultural practice to have emerged from the internet into a mainstream creative genre. Its latest transformation is evident through the increasing convergence of games and film where real-time virtual production as a professional creative practice is resulting in new forms of machine-generated interactive experiences. Using the most culturally significant machinima works (machine-cinema) as lenses to trace its history and impacts, 'Pioneers in Machinima: The Grassroots of Virtual Production' provides in-depth testimony by filmmakers and others involved in its emergence. The extensive reference to source materials and interviews bring the story of its impacts up to date through the critical reflections of the early pioneers. This book will be of interest to machinima researchers and practitioners, including game culture, media theorists, students of film studies and game studies, digital artists and those interested in how creative technologies have influenced communities of practice over time.
