**Mathematics of Complexity and Dynamical Systems** Robert A. Meyers, 2011-10-05

Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity, systems theory, and dynamical systems from the perspective of pure and applied mathematics. Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self-organization, e.g. the spontaneous formation of temporal, spatial or functional structures. These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic. The more than 100 entries in this wide-ranging, single source work provide a comprehensive explication of the theory and applications of mathematical complexity, covering ergodic theory, fractals and multifractals, dynamical systems, perturbation theory, solitons, systems and control theory, and related topics. Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity, from undergraduate and graduate students up through professional researchers.

*The Dash Reeves Site* Andrew C. Fortier, 2001 This newest addition to the American Bottom Archaeology series reports on the Dash Reeves site, an extensive Middle Woodland habitation site that represents a major floodplain village and locality for the production of stone tools. The village area consists of clusters of pits and a dense refuse heap containing hundreds of diagnostic Middle Woodlands artifacts: an extensive collection of lamellar blades and blade cores, projectile points, Hill Lake ceramics, a diversity of flake, blade, and core tools, and several exotic Hopewell-like pieces, including earspool and human figurine fragments. Inhabited between 150 A.D. and 300 A.D., during the Hill Lake phase, Dash Reeves appears to have been an important locus of interaction with peoples far to the south. The production of blades at Dash Reeves, especially those made of local colorful red and blue Ste. Genevieve cherts, possibly served as the focal point of a far-reaching blade-exchange system in the Midwest. America, the American Bottom Archaeology series documents the excavation of sites affected by the construction of Interstate Highway 270 on the Mississippi River floodplain in Illinois counties across the river from St. Louis. The series is cosponsored by the Federal Highway Administration and the Illinois Department of Transportation. Volumes on individual sites are supplemented by a summary volume on the FAI-270 Project's contribution to the culture history of the Mississippi River Valley.

**Lake Naivasha, Kenya** David M. Harper, R. Boar, M. Everard, P. Hickley, 2013-04-17

This is the first comprehensive study of an east African lake for thirty years. It represents the culmination of research expeditions which stretch back twenty years and is thus able to pick up long term changes which the individual research activities do not reveal. Lake Naivasha is a tropical lake whose natural fluctuations are now dwarfed by human impacts. Papers show how the irrigation for horticulture and power cooling has reduced the lake depth significantly; exotic arrivals have altered the plant community beyond recognition and its commercial value as a fishery and a tourist feature are reduced by over use. Despite this, the lake has considerable conservation value at present. It provides a different case study in the ever-growing library of the effects of human follies. Lake Naivasha has achieved global importance in the past ten years because its waters are used to sustain the largest horticultural industry in Africa. The book highlights its fragility under such pressure and points out the way towards sustainable use of the water and the ecosystem.

Real and Complex Singularities Ana Claudia Nabarro,Juan J. Nuño-Ballesteros,Raúl Oset Sinha,Maria Aparecida Soares Ruas,2016-10-25 This volume is a collection of papers presented at the XIII International Workshop on Real and Complex Singularities, held from July 27–August 8, 2014, in São Carlos, Brazil, in honor of María del Carmen Romero Fuster's 60th birthday. The volume contains the notes from two mini-courses taught during the workshop: on intersection homology by J.-P. Brasselet, and on non-isolated hypersurface singularities and Lê cycles by D. Massey. The remaining contributions are research articles which cover topics from the foundations of singularity theory (including classification theory and invariants) to topology of singular spaces (links of singularities and semi-algebraic sets), as well as applications to topology (cobordism and Lefschetz fibrations), dynamical systems (Morse-Bott functions) and differential geometry (affine geometry, Gauss-maps, caustics, frontals and non-Euclidean geometries). This book is published in cooperation with Real Sociedad Matemática Española (RSME)

*Coastal Engineering 2002* Jane McKee Smith,2003 This book contains more than 300 papers presented at the 28th International Conference on Coastal Engineering, held in Cardiff, Wales, in July 2002. **Solitons** Mohamed Atef Helal, 2022-11-12 This newly updated volume of the Encyclopedia of Complexity and Systems Science (ECSS) presents several mathematical models that describe this physical phenomenon, including the famous non-linear equation Korteweg-de-Vries (KdV) that represents the canonical form of solitons. Also, there exists a class of nonlinear partial differential equations that led to solitons, e.g., Kadomtsev-Petviashvili (KP), Klein-Gordon (KG), Sine-Gordon (SG), Non-Linear Schrödinger (NLS), Korteweg-de-Vries Burger's (KdVB), etc. Different linear mathematical methods can be used to solve these models analytically, such as the Inverse Scattering Transformation (IST), Adomian Decomposition Method, Variational Iteration Method (VIM), Homotopy Analysis Method (HAM) and Homotopy Perturbation Method (HPM). Other non-analytic methods use the computational techniques available in such popular mathematical packages as Mathematica, Maple, and MATLAB. The main purpose of this volume is to provide physicists, engineers, and their students with the proper methods and tools to solve the soliton equations, and to discover the new possibilities of using solitons in multidisciplinary areas ranging from telecommunications to biology, cosmology, and oceanographic studies.
