

The Dream Machine Richard Whittle,2010-04-27 WHEN THE MARINES decided to buy a helicopter-airplane hybrid “tiltrotor” called the V-22 Osprey, they saw it as their dream machine. The tiltrotor was the aviation equivalent of finding the Northwest Passage: an aircraft able to take off, land, and hover with the agility of a helicopter yet fly as fast and as far as an airplane. Many predicted it would reshape civilian aviation. The Marines saw it as key to their very survival. By 2000, the Osprey was nine years late and billions over budget, bedeviled by technological hurdles, business rivalries, and an epic political battle over whether to build it at all. Opponents called it one of the worst boondoggles in Pentagon history. The Marines were eager to put it into service anyway. Then two crashes killed twenty- three Marines. They still refused to abandon the Osprey, even after the Corps’ own proud reputation was tarnished by a national scandal over accusations that a commander had ordered subordinates to lie about the aircraft’s problems. Based on in-depth research and hundreds of interviews, The Dream Machine recounts the Marines’ quarter-century struggle to get the Osprey into combat. Whittle takes the reader from the halls of the Pentagon and Congress to the war zone of Iraq, from the engineer’s drafting table to the cockpits of the civilian and Marine pilots who risked their lives flying the Osprey—and sometimes lost them. He reveals the methods, motives, and obsessions of those who designed, sold, bought, flew, and fought for the tiltrotor. These stories, including never before published eyewitness accounts of the crashes that made the Osprey notorious, not only chronicle an extraordinary chapter in Marine Corps history, but also provide a fascinating look at a machine that could still revolutionize air travel.

V-22 Osprey Tilt-Rotor Aircraft Ronald O'Rourke,2009-11 The V-22 Osprey is a tilt-rotor aircraft that takes off and lands vertically like a helicopter and flies forward like an airplane. Bell/Boeing V-22 Osprey Bill Norton,2004 This joint Bell and Boeing project was established in 1982 in response to the Joint Services Advanced Vertical Lift Program covering a wide performance envelope and multiple tasks. The answer came in the form of the V-22 tilt-rotor, a concept tested earlier by Bell with their 1977 XV-15. The transport aircraft style fuselage of the V-22, able to carry 24 troops, is topped by a wing with a complex flap/aileron system and two swivelling pods housing Rolls-Royce turboshaft engines, each driving enormous three-bladed prop-rotors. The intention was that the USAF would receive the CV-22B for special missions work, the US Marine Corps the MV-22B assault transports and the US Navy the HV-22B CSAR/fleet logistics version, but the technologically challenging program has been set back by fatal accidents and an 18 month grounding while flight safety issues were addressed.However, it is set to recommence a restricted development program with the intention that the production aircraft will begin to be delivered at the end of 2003 and gain initial operating capability by 2005, making this comprehensive new book a timely in-depth coverage of the aircraft.

Defense Acquisitions Katherine V. Schinasi,2008-05 In a letter to Sec. of Defense Cohen, dated Dec. 15, 2000, the author stated that the Marine Corps’s V-22 aircraft was not ready for full-rate production & that the Sec. had made a prudent decision to defer that production decision until the V-22 Blue Ribbon Panel reports its findings. This report to Sec. of Defense Rumsfeld explains that conclusions about the program’s readiness for full-rate production are based on “best practices” work that has identified practices used by successful commercial & defense programs to develop & produce quality products in significantly less time & at lower costs. Reviews of major weapon systems has shown that failure to follow these practices has led to cost increases, schedule delays, & performance problems. Ill.

V-22 Osprey Tilt-Rotor Aircraft ,2006 The V-22 Osprey is a tilt-rotor aircraft, capable of vertical or short take off and landing, with forward flight like a conventional fixed-wing aircraft. The MV-22 is the Marine Corps' top aviation priority. Marine Corps leaders believe that the Osprey will provide them an unprecedented capability to quickly and decisively project power from well over the horizon. The Air Force's CV-22 version will be used for special operations. Army officials have testified that the service has no requirement for the V-22, but the Navy has expressed interest in purchasing MV-22s for a variety of missions. The V-22 program has

been under development for over 25 years. Safety and maintenance concerns have arisen during this period (due in large part to three fatal accidents). The commander of the V-22 maintenance squadron admitted to falsifying maintenance records to make the aircraft appear more maintainable than it was, and three Marines were found guilty of misconduct. The program has maintained support from many in Congress despite these deficiencies. The program has undergone restructuring to accommodate congressional direction, budget constraints, and recommendations from outside experts, and DoD managers. After a 17-month hiatus, the Osprey embarked on its second set of flight tests in May of 2002. Tests were completed in June 2005 to the satisfaction of Navy testers, who believe that the V-22 has resolved all technical and engineering problems identified in internal and external reviews. On Sep 28, 2005 the V-22 program passed a major milestone when the Defense Acquisition Board approved it for military use and full rate production. Supporters tout the V-22's operational capabilities relative to the helicopters it will replace. It will fly faster, farther and with more payload than the CH-46 Sea Knight the Marine Corps currently operates. They argue that this combination of attributes will provide the Marine Corps with new and potentially transformational capabilities.
