V2 Robert Harris, 2020-11-17 NEW YORK TIMES BESTSELLER From the bestselling author of Fatherland and Munich comes a WWII thriller about a German rocket engineer, a former actress turned British spy, and the Nazi rocket program. The first rocket will take five minutes to hit London. You have six minutes to stop the second. Rudi Graf is an engineer who always dreamed of sending rockets to the moon. But instead, he finds himself working alongside Wernher von Braun, launching V2 rockets at London for the Nazis from a bleak seaside town in occupied Holland. As the SS increases its scrutiny on the project, Graf, an engineer more than a soldier, has to muster all of his willpower to toe the party line. And when rumors of a defector circulate through the German ranks, Graf becomes a prime suspect. Meanwhile, Kay Caton-Walsh, a young English intelligence officer, is living through the turmoil of war. After she and her lover, an RAF officer, are caught in a V2 attack, she volunteers to ship out for newly liberated Belgium. Armed with little more than a slide rule and a few equations, Kay and her colleagues hope to locate and destroy the launch sites. But at this stage in the war it's hard to know who, if anyone, she can trust. As the death toll soars, these twin stories play out against the background of the German missile campaign during the Second World War. And what the reader comes to understand is that Kay's and Graf's destinies are on a collision course.

The V2 and the German, Russian and American Rocket Program ,

V2 Robert Harris, 2020-09-29 From the best-selling author of Fatherland and Munich comes a WWII thriller about a German rocket engineer, a former actress turned British spy, and the Nazi rocket program. It's November 1944-- Willi Graf, a German rocket engineer, is launching Nazi Germany's V2 rockets at London from Occupied Holland. Kay Connolly, once an actress, now a young English Intelligence officer, ships out for Belgium to locate the launch sites and neutralize the threat. But when rumors of a defector circulate through the German ranks, Graf becomes a suspect. Unknown to each other, Graf and Connolly find themselves on opposite sides in the hunt for the saboteur. Their twin stories play out against the background of the German missile campaign, one of the most epic and modern but least explored episodes of the Second World War. Their destinies are on a collision course.

Higher Excited States of Polyatomic Molecules Melvin Robin, 2012-12-02 Higher Excited States of Polyatomic Molecules, Volume II focuses on a higher level of activity in vacuum ultraviolet spectroscopy. This book explores the Rydberg states in atoms and molecules. Comprised of five chapters, this volume starts with an overview of the two-center unsaturated molecules that usually display sharp Rydberg transitions originating with the pi electrons. This book then discusses the unsaturated double bond that adds another dimension to the spectrum. Other chapters explore the optical spectrum of the amide group, which is the basic chromophoric unit in polypeptides. This text further discusses the all-electron calculations of the electronic structure of the amide group that is performed in Gaussian orbital basis sets. This book considers as well the prominent characteristic of Rydberg excitations in benzene. The final chapter deals with the biological molecules that are polyfunctional in general. Analytical chemists, photochemists, molecular spectroscopists, and researchers will find this book extremely useful.

Focusing of Charged Particles Albert Septier, 2012-12-02 Focusing of Charged Particles, Volume II presents the aspects of particle optics, including the electron, the ion optical domains, and the accelerator field. This book provides a detailed analysis of the principles of the laws of propagation of beams. Comprised of three parts encompassing three chapters, this volume starts with an overview of how a beam of charged particles traverses a region that is at a uniform, constant, electrostatic potential. This book then discusses the principle of charge repulsion effect by which the space charge of the beam modifies the potential in the region that it traverses. Other chapters examine the general design techniques and performances obtainable for electron guns applicable for use in initiating a beam for linear beam tubes that is given in a condensed form. The last chapter deals with the two stable charged particles that can be accelerated, namely, protons and electrons. This book is a valuable resource to physicists, accelerator experts, and experimenters in search of interactions in the detector target.

V2 Murray Barber, 2017-05 The German A4 rocket, or V2 - 'Vergeltungswaffen Zwei' (Vengeance Weapon 2), was the most sophisticated and advanced weapon developed in Europe during the Second World War. From September 1944 to March 1945, German army launch teams fired more than 3,000 V2 rockets at targets in England, France, Belgium and even within Germany itself. Many V2s were fired from mobile launch sites and from concealed wooded areas, using fleets of transporters and trailers with sophisticated ancillary and support vehicles. Travelling at the edge of space, the V2 rockets fell without warning at supersonic speeds, turning buildings and streets into cratered rubble, and terrorizing the civilians targeted by these attacks. Drawing on a wide range of archive sources, rare personal accounts and interviews conducted with personnel associated with the A4/V2 program, rocketry expert Murray R. Barber traces the origins of the V2 and presents a detailed view of the research conducted at the

secret, experimental rocket-testing facility at Kummersdorf West and the vast, infamous base at Peenemunde. This important new work reveals the transformation of the rocket into a weapon of war and describes the A4 in detail as well as the intense and often difficult intelligence effort by the Allies to discover more about this highly secret and unprecedented weapon, and to destroy it. The author also describes the field-testing of the A4 rocket, its reliability problems and the remedies and compromises employed to deal with them. He reveals the activities of the SS and their machinations to gain control of the rocket program from the Wehrmacht, as well as the subsequent operational deployment of the V2 in Operation Penguin, the 'vengeance' offensive against the British Isles. Illustrated throughout with rare and many previously unseen images (including color photographs), technical drawings and maps, this is the most comprehensive book ever on the V2, and includes important new details of the post-war development and testing of the rocket and its role in the dawning of the space age.

Spitfire Dive-Bombers versus the V2 Bill Simpson, 2007-06-21 On 8 September 1944 the first of over 1,000 V2 missiles aimed at southern England exploded in west London. It had been launched from a wooded street corner in Den Haag in the Netherlands. Fighter Command was responsible for defending Britain from air attack and thus Air Marshal Roderic Hill countered the threat by using six squadrons of Spitfires from 12 Group bases in Norfolk to discover and then dive-bomb the mobile V2 launch sites scattered throughout the Dutch towns and countryside. This was no easy task as the missiles were well camouflaged and often positioned adjacent to dwellings occupied by civilians. The RAF was under orders to cause minimum damage to Dutch property and life, therefore precision bombing became a necessity. This is a full account of the campaign including discussions of the strategy and tactics employed and the equipment used and it also considers the effect upon Dutch civilians. It draws upon the experiences of sixteen Allied pilots, ground crew and the Dutch who were at the receiving-end of the attacks.

Fluorine Chemistry J.H. Simons, 2012-12-02 Fluorine Chemistry, Volume II focuses on studies on fluorocarbons and fluorocarbon derivatives. Composed of various literature, the book first discusses fluorine-containing complex salts and acids. The complex fluorides of alkali metals, beryllium, boron, carbon, silicon, germanium, tin, and lead are described. The text also looks at research on halogen fluorides. The physical properties of chlorine, bromine, and iodine fluorides; halogen fluorides as ionizing solvents; and acids and bases in iodine pentafluoride and chlorine trifluoride are discussed. The book discusses analytical chemistry of fluorine and fluorine-containing compounds. Analysis of gaseous samples; separation and isolation of fluorine; qualitative detection and identification of fluorine; and determination of fluorine in specific materials are described. The text also focuses on organic compounds containing fluorine. Alcohols, acids and their derivatives, polymer containing fluorines, amines, amino acids, drugs, dyes, and pesticides are discussed as well. The book further looks at metallic compounds containing fluorocarbon radicals and organometallic compounds containing fluorine, fluorocarbon chemistry, and the infrared spectra of fluorocarbons and related compounds. The text is a vital source of information for readers wanting to study fluorocarbons and fluorocarbon derivatives.

Maple and Mathematica Inna K. Shingareva, Carlos Lizárraga-Celaya, 2009-08-14 In the history of mathematics there are many situations in which calculations were performed incorrectly for important practical applications. Let us look at some examples, the history of computing the number e began in Egypt and Babylon about 2000 years BC, since then many mathematicians have calculated e (e. g. , Archimedes, Ptolemy, Viète, etc.). The first formula for computing decimal digits of e was discovered by J. Machin (in 1706), who was the first to correctly compute 100 digits of e . Then many people used his method, e. g. , W. Shanks calculated e with 707 digits (within 15 years), although due to mistakes only the first 527 were correct. For the next examples, we can mention the history of computing the fine-structure constant α (that was first discovered by A. Sommerfeld), and the mathematical tables, exact calculations, and formulas, published in many mathematical textbooks, were not verified rigorously [25]. These errors could have a large effect on results obtained by engineers. But sometimes, the solution of such problems required such technology that was not available at that time. In modern mathematics there exist computers that can perform various mathematical operations for which humans are incapable. Therefore the computers can be used to verify the results obtained by humans, to discover new results, to prove the results that a human can obtain without any technology. With respect to our example of computing e , we can mention that recently (in 2002) Y. Kanada, Y. Ushiro, H. Kuroda, and M.
