The Rocket Men Rex Hall,Shayler David,2001-04-10 This book is the first known work in the west dedicated to revealing the full story of the Vostok space missions, and the first fledgling steps off our planet. In Leaving the Planet authors Rex Hall and Dave Shayler review this Soviet demonstration of technological progress. The text examines both the developmental and operational aspects of the missions, which at the time were clouded in secrecy. This fascinating and important text features a significant amount of new material on the spacecraft, as well as the history, design and development of the launch vehicle. It also includes the full story of the men and women who trained for these missions, some of whom never flew.

THE SPACE PATHS OF THE VOSKHOD. T. MELKUMOV,FOREIGN TECHNOLOGY DIV WRIGHT-PATTERSON AFB OHIO.,1965

Voskhod 4 Jeff Hille,2010-02-01 In 1960, the Russians joined the space race in earnest and two huge machines came into action; their technological machine, and their security machine. The security machine was vastly and ruthlessly efficient, draconian in nature. At that time, very little was known about their manned space launches until the event had happened, and even the American CIA was unable to effectively penetrate the wall of secrecy the KGB so efficiently put around the Russian manned space program. Even since the fall of the Communist regime and the theoretical disappearance of the KGB, much is still waiting to surface about what happened in that era, much is still unknown. On the other side of the coin, the Russians were very open about UFO sightings, and even encouraged research and discussion about such things, even putting on a weekly TV program about these matters. It is here, in the blending of their secrecy about their manned space program and open-mindedness about UFO matters, that our story unfolds.

Praxis Manned Spaceflight Log 1961-2006 Tim Furniss,Shayler David,Michael D. Shayler,2007-08-17 This flagship work charts a complete chronological log of orbital manned spaceflight. Included are the X-15 astroflights of the 1960s, and the two 1961 Mercury and Redstone missions which were non-orbital. There is an image depicting each manned spaceflight, and data boxes containing brief biographies of all the space travelers. The main text is a narrative of each mission, its highlights and accomplishments, including the strange facts and humorous stories connected to every mission. The resulting book is a handy reference to all manned spaceflights, the names of astronauts and cosmonauts who flew on each mission, their roles and accomplishments.

Salyut : Soviet steps toward permanent human presence in space. ,2008 As the other major spacefaring nation, the Soviet Union is a subject of interest to the Congress in their deliberations concerning the future of U.S. space activities. In the course of an assessment of Civilian Space Stations (in 1983), the Office of Tech. Assessment (OTA) undertook a study of the presence of Soviets in space & their Salyut space stations. The major element in this technical memorandum was a workshop held at OTA in Dec. 1982: it was the first occasion when a significant number of experts in this area of Soviet space activities had met for extended unclassified discussion. As a result of the workshop, OTA prepared this report. Includes ¿Graphic Comparison of Soviet & U.S. Space Vehicles¿ Illustrations.

Spacecraft Michael H. Gorn,2018-09-04 Spacecraft takes a long look at humankind's attempts and advances in leaving Earth through incredible illustrations and authoritatively written profiles on Sputnik, the International Space Station, and beyond. In 1957, the world looked on with both uncertainty and amazement as the Soviet Union launched Sputnik 1, the first man-made orbiter. Sputnik 1 would spend three months circling Earth every 98 minutes and covering 71 million miles in the process. The world's space programs have traveled far (literally and figuratively) since then, and the spacecraft they have developed and deployed represent almost unthinkable advances for such a relatively short period. This ambitiously illustrated aerospace history profiles and depicts spacecraft fromSputnik 1 through the International Space Station, andeverything in between, including concepts that have yet to actually venture outside the Earth's atmosphere. Illustrator and aerospace professional Giuseppe De Chiara teams up with aerospace historian Michael Gorn to present a huge, profusely illustrated, and authoritatively written collection of profiles depicting and describing the design, development, and deployment of these manned and unmanned spacecraft. Satellites, capsules, spaceplanes, rockets, and space stations are illustrated in multiple-view, sometimes cross-section, and in many cases shown in archival period photography to provide further historical context. Dividing the book by era, De Chiara and Gorn feature spacecraft not only from the United States and Soviet Union/Russia, but also from the European Space Agency and China. The marvels examined in this volume include the rockets Energia, Falcon 9, and VEGA; the Hubble Space Telescope; the Cassini space probe; and the Mars rovers, Opportunity and Curiosity. Authoritatively written and profusely illustrated with more than 200 stunning artworks, Spacecraft: 100 Iconic Rockets, Shuttles, and Satellites That Put Us in Space is sure to become a definitive guide to the history of manned space exploration.

Astronautics Year David Howard,2014-05-12 Astronautics Year: An International Astronautical and Military Space/Missile Review of 1964 documents in detail the international astronautical and military space/missile activities conducted in 1964. This book focuses on two major space achievements—RANGER 7 and VOSKHOD I. RANGER 7 was a spectacular achievement demonstrated by Jet Propulsion Laboratory, while VOSKHOD I was claimed as the biggest rocket in existence that was launched while carrying two retro-rocket systems. This compilation also provides brief notes on a number of space/missile projects and programs underway during 1964, such as the AADS-70,

ADOBE, AIM-47A, and APOLLO. A table containing a fully comprehensive listing of all announced spacecraft launch attempts made during the same year are likewise described. This text is recommended for researchers and specialists concerned with aeronautics and aerospace research.

Two Sides of the Moon David Scott,Alexei Leonov,Christine Toomey,2006-02-21 In this unique dual autobiography, Apollo 15 commander David Scott and cosmonaut Alexei Leonov, the first man to ever walk in space, recount their exceptional lives and careers spent on the cutting edge of science and space exploration--and their participation in the greatest technological race ever--to land a man on the Moon. With each mission fraught with perilous risks, and each space program touched by tragedy, these parallel tales of adventure and heroism read like a modern-day thriller. Cutting fast between their differing recollections, this book reveals, in a very personal way, the drama of one of the most ambitious contests ever embarked on by man, set against the conflict that once held the world in suspense: the clash between Communism and Western democracy. Through the men's memoirs, their courage, passion for exploration, and determination to push themselves to the limit, emerge not only through their triumphs but also through their perserverance in times of extraordinary difficulty and danger--back cover.

Space Exploration and Humanity [2 volumes] American Astronautical Society,2010-08-23 A complete history of human endeavors in space, this book also moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. In two expertly written volumes, Space Exploration and Humanity: A Historical Encyclopedia covers all aspects of space flight in all participating nations, ranging from the Cold War–era beginnings of the space race to the lunar landings and the Apollo-Soyuz mission; from the Shuttle disasters and the Hubble telescope to Galileo, the Mars Rover, and the International Space Station. The book moves beyond the traditional topics of human spaceflight, space technology, and space science to include political, social, cultural, and economic issues, and also commercial, civilian, and military applications. Produced in conjunction with the History Committee of the American Astronautical Society, this work divides its coverage into six sections, each beginning with an overview essay, followed by an alphabetically organized series of entries on topics such as astrophysics and planetary science; civilian and commercial space applications; human spaceflight and microgravity science; space and society; and space technology and engineering. Whether investigating a specific issue or event or tracing an overarching historic trend, students and general readers will find this an invaluable resource for launching their study of one of humanity's most extraordinary endeavors.
