Effect of Stabilization on VTOL Aircraft in Hovering Flight Richard K. Greif,Emmett B. Fry,Ronald M. Gerdes,Terrence D. Gossett,1972

Martin Model 262 Convoy Fighter Jared A. Zichek,2015-10-03 The Martin Model 262 was an unconventional turboprop VTOL aircraft proposal submitted to the US Navy's convoy fighter competition of 1950, which ultimately produced the Convair XFY-1 Pogo and Lockheed XFY-1 Salmon. It was a swept-wing aircraft with triple vertical tails powered by an Allison XT-40-A-8 turboprop engine driving 16 ft contra-rotating propellers. The launch and recovery system consisted of a hinged vertical platform mounted on a merchant ship. The pilot approached the platform from the side and hovered vertically just in front of it, attaching the aircraft to the platform with a retractable nosegear spike and landing on two small retractable wing gear. The fighter was armed with four 20 mm cannon and was designed to protect convoy vessels from enemy air attack. In addition to the basic Model 262, Martin also presented Modifications A, B and C, the configurations of which were even more unorthodox than the main proposal. Finally, the book examines the Model 262P, a handsome scale demonstrator designed to verify the basic soundness of the concept. This ebook features a comprehensive text and 56 high resolution illustrations, including detailed schematics, artist's impressions, and speculative color profiles of these remarkable secret aircraft projects. This is the author's second book covering the USN convoy fighter competition, the first one being devoted to the Goodyear GA-28A/B, also available in the Google Play store and other bookstores worldwide.

Civil Aeronautics Board Planning Study Carl Hintze,1970

The Curtiss X-Planes Francis H. Dean,2001 This book is a lavishly illustrated story of Curtiss Wright Corporation's 1950s and 1960s efforts in developing a vertical takeoff (VTOL) aircraft. The author, an insider who headed preliminary design work, gives a brief history of Curtiss Wright, and of the Curtiss Propeller Division that spawned the program, then follows with the development details of the X-100 concept demonstrator and the follow-on X-19 military aircraft. Photos and detailed design descriptions are provided, as well as test flights and test pilot's reports, and finally, never before seen advanced military and civil VTOL aircraft concepts studies.

Northrop N-63 Convoy Fighter Jared A. Zichek,2015-11-11 The Northrop N-63 was an unconventional VTOL turboprop tailsitter aircraft proposal submitted to the US Navy's convoy fighter competition of 1950, which ultimately produced the Convair XFY-1 Pogo and Lockheed XFY-1 Salmon. It was a single-seat high performance fighter designed to protect convoy vessels from attack by enemy aircraft, and for vertical unassisted takeoff from, and landings on, small platform areas afloat or ashore. The N-63 featured a straight wing with pronounced dihedral and a very large ventral T-tail; armament consisted of four 20 mm cannon mounted in large pods on the wing tips. The aircraft was powered by an Allison XT-40-A-8 turboprop engine driving 15.5 ft six-blade dual-rotation propellers. The Northrop convoy fighter was designed to land vertically on a robust central landing strut in a collapsible tailcone as well as small shock absorbers located on the aft ends of the wing pods and vertical stabilizer; these landing support points were spread far apart to enhance stability on the deck. In addition to the N-63, Northrop also submitted the N-63A scale prototype airplane design, a small technology demonstrator powered by an Armstrong Siddeley Double Mamba turboprop. It featured a swappable tail section and auxiliary landing gear which permitted it to take off and land either conventionally or vertically, depending on the proficiency of the pilot. This ebook features 66 illustrations, including detailed schematics, artist's impressions, photos, and speculative color profiles of these remarkable secret aircraft projects, which are sure to appeal to historical aviation enthusiasts and scale modelers alike. This is the publisher's third book covering the convoy fighter competition, the first two being devoted to the Goodyear GA-28A/B and Martin Model 262, both of which are still available from booksellers worldwide in print and digital formats.

Comparison of Information Display Concepts for Landing of VTOL Aircraft William Gracey,United States. National Aeronautics and Space Administration,1968

An Investigation of the Effect of Downwash from a VTOL Aircraft and a Helicopter in the Ground Environment Thomas C. O'Bryan,1961 Dynamic-pressure measurement, in ground effect, have been obtained about a single-rotor helicopter and a dual-propeller VTOL aircraft. The results indicate that the slipstream dynamic pressure along the ground, some distance from the center of rotation, is not a function of disk loading but merely a function of the gross weight or thrust of the aircraft. Furthermore, for a given gross weight the thickness of this is out-ward flowing sheet of air is less for a small-diameter propeller (higher disk loading propeller).

Award of X-22 (VTOL) Research and Development Contract United States. Congress. Senate. Committee on Armed Services. Preparedness Investigating Subcommittee,1963

Evaluation of Noise Problems Anticipated with Future VTOL Aircraft John N. Cole,Robert T. England,1967 The potential noise problems anticipated with future VTOL aircraft are analyzed and discussed in general terms, and a brief review of the basic principles of noise generation of various types of propulsion systems proposed for VTOL is included. Primary consideration is given to the noise environments produced in areas adjacent to VTOL sites, since they could cause the most serious noise problem limiting the usefulness of VTOL aircraft. Contours of perceived noise levels are compared for different takeoff and landing profiles of 3-4 passenger, 60 passenger, and 25 ton-lift-crane VTOL aircraft. Criteria and methods for assessing the response of communities to noise from V-port operations are discussed along with the problem of detection of military VTOL aircraft by means of noise. Recommendations are given on the requirements for future research on these noise problems with emphasis on the need for considering noise as an integral part of the design, selection, and test of VTOL aircraft.

Vertical Take-off and Landing (VTOL) Aircraft I. B. Laskowitz,1963

An Experimental Investigation of VTOL Flying Qualities Requirements for Shipboard Landings Robert C. Radford,Dominick Andrisani (II.),John L. Beilman,1981

Initial VTOL Flight Control Design Criteria Development - Discussion of Selected Handling Qualities Topics John Kroll (Jr.),1968 This report presents a series of discussions on selected topics related to the development of VTOL flying qualities criteria. The topics were chosen on the basis of their importance to flying qualities and the potential significance to the Air Force VTOL Integrated Flight Control System (VIFCS) program. The treatment given to the selected topics was aimed at identifying those areas that require further study and research within the scope of the VIFCS program. -- page iii.

Motion Coordination for VTOL Unmanned Aerial Vehicles Abdelkader Abdessameud,Abdelhamid Tayebi,2013-05-26 Motion Coordination for VTOL Unmanned Aerial Vehicles develops new control design techniques for the distributed coordination of a team of autonomous unmanned aerial vehicles. In particular, it provides new control design approaches for the attitude synchronization of a formation of rigid body systems. In addition, by integrating new control design techniques with some concepts from nonlinear control theory and multi-agent systems, it presents a new theoretical framework for the formation control of a class of under-actuated aerial vehicles capable of vertical take-off and landing. Several practical problems related to the systems' inputs, states measurements, and restrictions on the interconnection topology between the aerial vehicles in the team are addressed. Worked examples with sufficient details and simulation results are provided to illustrate the applicability and effectiveness of the theoretical results discussed in the book. The material presented is primarily intended for researchers and industrial engineers from robotics, control engineering and aerospace communities. It also serves as a complementary reading for graduate students involved in research related to flying robotics, aerospace, control of under-actuated systems, and nonlinear control theory

VTOL Military Research Aircraft Mike Rogers,1989 A comprehensive history of vertical take-off and landing aircraft examines VTOL experimentation, development, and deployment, as well as the different types of VTOL aircraft from tailsitters to vectored jets

Goodyear GA-28A/B Convoy Fighter: Jared A. Zichek,2015-08-10 A detailed overview of the Goodyear Aircraft Corporation GA-28A/B, one of the submissions to the US Navy convoy fighter competition of 1950, which ultimately produced the Convair XFY-1 and Lockheed XFY-1 VTOL aircraft. The GA-28A was a three-quarter scale prototype of the convoy fighter, while the GA-28B was the full scale design armed with four 20 mm cannon. Both were VTOL tailsitters powered by turboprop engines and featured a semi-delta, semi-midwing configuration with triple vertical tail surfaces. The aircraft also had unusual landing gear which permitted either conventional or vertical landing and takeoff. Features 40 illustrations, including detailed

schematics, artist's impressions, and speculative color profiles of these unorthodox aircraft designs. An ideal book for modelers and enthusiasts of secret aircraft projects.
