**Water from the Well** Myra McLarey, 2000-03 Set in rural Arkansas in 1919, this novel tells the story of ex-slaves, displaced Yankees, and a century of community history.

Water Well Rehabilitation Neil Mansuy, 2017-11-22 Well rehabilitation techniques have been the focus of major advancements in recent times. Environmental engineers can keep pace with those changes with the book *Water Well Rehabilitation*. Written from a microbiological viewpoint, the text outlines proven solutions to production problems in all types of wells. That perspective frequently yields new ideas and concepts, contrary to prevalent thoughts in mainstream literature on the subject. This is especially true in discussion of iron related bacterial sources, and details concerning unsafe bacterial samples and the contamination of wells.

Managing Water Well Deterioration Robert McLaughlan, 2002-01-01 Effective management of a water well requires that the water well can meet a set of performance indicators. These can include criteria related to water quality, yield, economics and asset life. Water well deterioration due to fouling and corrosion impacts the ability of a well system to meet these criteria. Managing well deterioration processes involves understanding the nature of these processes and having in place water well maintenance strategies to deal with them. Managing water well deterioration fills a need within the literature for an academically based informative text that incorporates practical advice. The focus on a problem-oriented approach to diagnosing well deterioration makes the book a useful practical handbook. It integrates concepts from hydrogeology, hydrochemistry and microbiology to give a thorough understanding of water well deterioration processes. Scenarios have been developed to illustrate common causes of water well fouling. A feature of the book is the treatment of both corrosion and fouling issues in depth. Case studies selected from around the world are used to illustrate approaches to the diagnosis and remediation of well deterioration. These scientifically orientated perspectives on water well deterioration are embedded within a management framework to provide a comprehensive approach to dealing with water well deterioration.

Water from a Deep Well Gerald L. Sittser, 2013-04-23 In Rome in A.D. 165, two men named Carpus and Papyrus stood before the proconsul of Pergamum, charged with the crime of being Christians. Not even torture could make them deny Christ, so they were burned alive. Is my faithfulness as strong? In the fifth century, Melania the Younger and her husband, Pinian, distributed their enormous wealth to the poor and intentionally practiced the discipline of renunciation. Could living more simply deepen my trust in God? In the sixteen hundreds, Philipp Jakob Spener's

love for the Word of God and his desire to help people apply the Bible to their life moved him to start Colleges of Piety, or small groups. In what ways could commitment to community make me more like Christ? The history of the church has shaped what our faith and practice are like today. It's tempting to think that the way we do things now is best, but history also has much to teach us about what we've forgotten. In *Water from a Deep Well*, Gerald Sittser opens to us the rich history of spirituality, letting us gaze at the practices and stories of believers from the past who had the same thirst for God that we do today. As we see their deep faith through his vibrant narratives, we may discover that old ways can bring new life to our own spirituality.

Water Well Standards California Department of Wate Resources,2016-12-02 Excerpt from Water Well Standards: Del Norte County Bulletin No. 7h-3, Recommended Minimum water well Construction and Sealing Standards for the Protection of Ground Water Quality, Del Norte County, gives the results of a comprehensive Ground water Quality Investigation conducted throughout Del Norte County. This is the final report incorporating the comments and recommendations of cooperating agencies and individuals on our preliminary edition of March 196h. The investigation was conducted under authority of Section 231 of the water code and at the request of interested agencies operating in the County. This is one of a series of reports designed to formulate and recommend water well construction and sealing standards for particular localities of the State where regulation is deemed necessary for the protection of ground water quality. In Del Norte County, where no such regulation exists, many water wells which have been improperly constructed or abandoned are contributing to quality impairment of ground water. The report concludes that water well construction and sealing standards should be adopted and enforced. The recommended standards presented are based on geologic, hydrologic, and water quality conditions and well construction practices found in Del Norte County. These standards are similar to and should supplement the minimum standards presented in Bulletin No. 7h entitled, Recommended Minimum Well Construction and Sealing Standards for the Protection of Ground Water Quality, State of California. The report recommends adoption of water well construction and sealing standards in Del Norte County. The report also recommends continuation of investigational work by the local agencies, leading to the identification and correction of existing improperly constructed and abandoned water wells.
