A Dictionary of the World's Watercraft ,2001 For nearly all of human history the coasts and oceans, and rivers and lakes have offered paths for exploration, settings for warfare, routes for commerce and colonialism and, of course, sources for food. And for all these activities an incredible variety of indigenous watercraft have been fashioned by sailors and fishermen and shipwrights. Aak to Zumbra surveys them all and contains descriptions of form and function, means of propulsion, crew size, particular design features, as well as notes on construction methods and materials. There are thousands of cross-references, starred for easy reference, with vernacular and specialised terms. Also included are little-known, rare and extinct types, notes on cultural traditions, along with a reading list and a geographical index.

The Archaeology of Vernacular Watercraft Amanda M. Evans,2016-04-19 This volume presents multiple idiographic, archaeological studies of vernacular watercraft from North America and the Caribbean. Rather than attempt to synthesize all vernacular types, this volume focuses on ship construction data recovered through archaeological investigations that has been used to make inferences about culture. This collection of case studies, including many examples from cultural resource management and graduate student theses, presents a thematic exploration of cultural adaptation as expressed through ship construction.

The Archaeology of Watercraft Abandonment Nathan Richards,Sami Kay Seeb,2013-06-05 The historical importance and archaeological potential of deliberately discarded watercraft has not been a major feature of maritime archaeological enquiry. While research on the topic has appeared since the 1970s as books, chapters, and articles, most examples have been limited in focus and distribution, and in most cases disseminated as unpublished archaeological reports (i.e. the "gray literature".) So, too, has there been a lack of a single source representing the diversity of geographical, historic, thematic, and theoretical contexts that ships' graveyard sites and deliberately abandoned vessels represent. In contrast with much of the theoretical or case-specific literature on the theme of watercraft discard, this volume communicates to the reader the common heritage and global themes that ships' graveyard sites represent. It serves as a blueprint to illustrate how the remains of abandoned vessels in ships' graveyards are sites of considerable research value. Moreover, the case studies in this volume assist researchers in understanding the evolution of maritime technologies, economies, and societies. This volume is intended to expose research potential, create discussion, and reinforce the significance of a prevalent cultural resource that is often overlooked.

Hydrodynamics of Planing Monohull Watercraft William S. Vorus,2016-08-26 This book addresses the principles involved in the design and engineering of planing monohull power boats, with an emphasis on the theoretical fundamentals that readers need in order to be fully functional in marine design and engineering. Author William Vorus focuses on three topics: boat resistance, seaway response, and propulsion and explains the physical principles, mathematical details, and theoretical details that support physical understanding. In particular, he explains the approximations and simplifications in mathematics that lead to success in the applications of planing craft design engineering, and begins with the simplest configuration that embodies the basic physics. He leads readers, step-by-step, through the physical complications that occur, leading to a useful working knowledge of marine design and engineering. Included in the book are a wealth of examples that exemplify some of the most important naval architecture and marine engineering problems that challenge many of today's engineers.
